Jafnapatam, seaport of Ceylon, whence are exported great quantities of tobacco, and some elephants, which are accounted the most docile of any in the world. The Dutch took it from the Portuguese in 1658; and it was taken by the English in 1795. It stands at the N. end of the island, 100 ms. N. of Candy. Lon. $80^{\circ} 10' E.$ lat. $9^{\circ} 15' N.$

Jaffrey, pst. Cheshire cy. N. H., lying near the boundary line between this state and Mass., about 70 ms. SW. of Portsmouth, and 25 eastward of Connecticut river. Pop. 1820, 1339. Great Monadnock mountain is in this tp.

Jagarnaut, town of Hindoostan, in the province of Orissa. Here is a famous pagoda, one of the first objects of Hindoo veneration, and an excellent seaport. It stands on the bay of Bengal, 48 ms. S. of Cattack. Lon. $86^{\circ} 17' E.$ lat. $19^{\circ} 50' N.$

Jagernulorf, town and castle of Silesia, capital of a province of the same name; seated on the Oppa, 13 ms. NW. of Trappan. Lon. $17^{\circ} 44' E.$ lat. $50^{\circ} N.$

Jaghre, district of Hindoostan, in the Carnatic, subject to the English East India Company. It extends 101 ms. along the coast, from Alem-parve on the S., to Lake Pullicate on the N., and is 47 ms. inland in the widest part. Madras is the chief place.

Jago, St. largest and most fertile of the Cape Verd Islands, 10 ms. long and 5 broad. It abounds with high barren mountains; and the air, in the rainy season, is unwholesome to strangers. The animals are bees, horses, asses, mules, deer, goats, hogs, civet-cats, and monkeys. Here are fowls and birds of almost all sorts; and maize, plantains, bananas, pumpkins, oranges, lemons, tamarinds, pine-apples, cocoa-nuts, guavas, tar, apples and sugar-canes. It has also some cedar-trees, and plenty of cot-

ton. Ribeira Grande is the capital, but the governor resides at Porto Praya.

Jago, St. capital of Chili, and a bishop's see, with a good harbour, and a royal audience. Beside the Cathedral, there are three parish churches, and eight monasteries. The inhabitants, about 40,000, are native Americans and Spaniards. Here are several canals, and a dyke, by means of which they water the gardens and cool the streets. It is seated in a beautiful plain, at the foot of the Andes, on the river Mapocho. Lon. $71^{\circ}45'$ W. lat. $34^{\circ}10'$ S.

Jago-de-Cuba, St. formerly capital of the island of Cuba. Lon. W. C. $1^{\circ}28'$ E. lat. $20^{\circ}15'$ N.

Jalisco, state of the Republic of Mexico, formerly, the Intendency of Guadalajara; bounded W. by the Pacific Ocean. N. by the states of Sonora y Sinaloa and Durango, NE. by Xacatecas, E. by Guanajuato, and SE. and S. by Mechoacan. Length from N. to S. 320. ms., and breadth E. and W. 250; with an area of 74,280 sqms. Pop. 1825, 944,867. Lying between N. lat. 19° and 24° .

The state of Jalisco, is crossed from SE. to NW., by the Rio de Santiago, a considerable stream, which communicates with lake Chapala, and will, no doubt, in the advance of population, wealth and civilization, become an important channel of inland commerce from Salamanca, and Zelaya, to San Blas.

All the eastern part of this state is the table land, and western declivity, of the Cordilleras of Anahuac. The maritime regions, especially those which stretch towards the great bay of Bayona, are covered with forests, and abound in excellent wood for ship building. But in this latter country, the air is excessively heated, and unhealthy. The high interior, and eastern part is temperate and salubrious. The difference in elevation from the Pacific coast to the confines of Guanajuato, and Valladolid exceeds 6000 feet. The Volcano of Colima, rises in an isolated ridge to upwards of 10,000 feet. It is only however, occasionally covered with snow. Colima, is the most western active Volcano known in America. Lon. W. C. 26° W. lat. $18^{\circ}5'$ N.

The staples of this state are maize, wheat, cotton, cochineal, and the precious metals. In 1802, the value of its agricultural produce amounted to 2,599,000 dollars, and that of its manufactures to 3,302,300 dollars. The state contains 2 cities, 6 large and 322 small villages. The principal mines, are, those of Bolanos, Asientes de Ibara, Hostiotipaqueillo, Copala and Guichichilla. See *Guadalajara*.

Jamaica, island of the W. Indies, discovered by Columbus, in 1494. It lies 50 leagues W. of St. Domingo, nearly the same distance S. of Cuba, and is of an oval figure, 170 ms. long and 60 broad, containing 4,080,000 acres. A ridge of hills runs lengthwise from E. to W., whence numerous rivers take their rise on both sides; and though none of them are navigable, even for barges, yet the sugars are carried upon many of them in canoes, from the remote plantations to the seaside; some of them run under ground for a considerable space, particularly the Cobre and Pedra. The year is distinguished into two seasons, the wet and dry; but the rains are not so frequent as

formerly, which is supposed to be owing to the cutting down of the woods. About 9 in the morning it is so intolerably hot, that it would be difficult to live, if the easterly breeze did not arise to cool the air. Sometimes the nights are pretty cool, and there are great dews, which are deemed unwholesome, especially to new comers. The months of July, August and September, are called the hurricane months, because then they are the most frequent; and there is lightning almost every night. The central mountains of Jamaica rise in some of their peaks to 7830 feet above the level of the Ocean. The seasons partake of the variety of elevation. The southern slope of the island spreads into immense plains, generally covered with sugar cane. The whole cultivated surface of the island, amounts to about 1,000,000 of acres. The government of Jamaica is a true British colonial establishment, vested in a governor, appointed and only amenable to the crown; a council composed of 12 members, whose powers emanate from the same source with those of the governor; and a house of assembly composed of 43 members who are elected by, and represent, the freeholders.

The general produce of this island is sugar, rum, molasses, ginger, cotton, indigo, pimento, cocoa, coffee, several kinds of woods, and medicinal drugs. It has some tobacco, but not good, and used only by the negroes, who can scarcely live without it; also maize, Guinea corn, and peas of various kinds, with variety of roots. Fruits are in great plenty, such as oranges, lemons, shaddocks, citrons, pomegranates, pine-apples, prickley pears, melons, pumpions, guavas and many other sorts. The principal town is Kingston; but St. Jago de la Vega, or Spanish town, is the seat of government.

James Bay, the southern extension of the sea of Hudson, or Hudson's bay. It abounds with islands of various extent, and reaches as far south as lat. $52^{\circ} N.$, receiving a number of rivers, some of which are of great length and magnitude, the principal are Albany, Moose, Hurricane, and East Maine.

James, island on the coast of S. C. between Stono river, and Charleston harbour.

James City, cty. Virg., between York and James river, and bounded by Warwick SE., James river and Chickahominy river SW., New Kent, NW., and York river and York cty. NE. Length 23 ms., mean width about 8; area 184 sqms. Surface rather waving than hilly. Soil generally sterile. Chief town, Williamsburg. Pop. 1820, 3161. Ctl. lat. $37^{\circ} 15' N.$ lon. W. C. $0^{\circ} 15' E.$

James Island, island of Africa, 30 ms. up the river Gambia, and 3 ms. from its nearest shore. Here the English have a fort and factory. Lon. $16^{\circ} W.$ lat. $13^{\circ} 15' N.$

James river, river of Virg., is formed from two branches, Jacksons river and Cowpasture river, both rising in Bath and Pendleton cties., and uniting in the northern angle of Botetourt cty. It thence flows, by comparative courses, SSE. 35 ms. to Patonsburg, where it turns to ENE. 20 ms., to the foot of the Blue ridge, in Rockbridge cty., and receiving from the N. a large accession of water, by the great Calpasture river, turns to SE. and pierces the mountain, at lat. $37^{\circ} 35'$ and lon. W. C. $2^{\circ} 30' W.$ From its passage through the Blue Ridge, this noble stream, with many partial windings, but a general comparative course of a little S. of E. 270 ms., unites with Chesapeake bay, between Old Point Comfort and Lynhaven bay. Its mouth between Hampton and the mouths of Elizabeth and Nansemond rivers, is known by the name of Hampton Roads.

The tide flows up James river to the first falls at Richmond. Ships of the line of the largest class can enter its mouth. Vessels of 40 guns can be navigated to James town, and those of 250 to Warwick, smaller vessels of 125 or 130 ascend to Rockets, about one mile below Richmond. A canal cut round the falls or rapids, opens a boat navigation 230 ms. still higher.

The Board of Public Works in Virg., have

given many statements of the utility, and suggested the practicability of a canal connexion between James and Ohio rivers. In order to enable the reader to form his own opinion on this interesting subject, from correct data, the following geographical notice and table are subjoined. It will be perceived from the table, that to connect James and Kenhawa rivers, two routes are proposed; one by Jacksons and Greenbriar rivers; and another by Craig's creek branch of James river, and by Sinking creek branch of Kenhawa.

Mr. Briggs, in a communication to the board of works, through Mr. Peyton, its secretary, has given the general levels of the sources of Craig's creek, that branch of James river which interlocks with Sinking creek branch of Kenhawa, in the great valley SW. of the Blue Ridge. These elements are of the utmost consequence in forming a correct idea of the country over which canals are designed to be drawn, to unite James and Kenhawa rivers. The following short geographical description will serve to inform the reader of the locality of the two creeks so particularly noticed in the annexed table.

Craig's creek is formed by two branches, John's creek, and Craig's creek proper, both rising in Giles cty., in Virg., at N. lat. $37^{\circ} 20'$, and $3^{\circ} 30' W.$ lon. from W. C. Both branches flow NE. into Botetourt cty., in which they unite, and fall into James river, about 15 ms. below the junction of Jacksons and Cowpastures rivers, after a comparative course of 40 ms.

Sinking creek rises between Pond and Walker's mountains, and between John's and Craig's creeks, in Giles cty., flows SW. 25 ms., and falls into Great Kenhawa, at N. lat. $37^{\circ} 17'$, and W. lon. $3^{\circ} 42'$ from W. C.

Jamtland, province of Sweden, bordering on Norway, nearly of a circular form, about 70 ms. in length, and 60 in breadth, annexed to the crown of Sweden by the treaty of Roschild, in 1658. It is in general mountainous. The eastern part is a champaign country, watered with several lakes and rivers, which abound with fish. The country produces excellent oats, and abounds in good turnips. It contains alum quarries, sandstone, slate, the lapis ollarius, flint rock crystals, lead ore, two new built copper-works, and a place where salt-petre is refined. The inhabitants subsist by agriculture, grazing, hunting, and fishing. They also carry on a considerable trade with the Norwegians.

Janeiro, province of Brasil, bounded by the Atlantic Ocean E., SE., and S., St. Paul's SW., and Minas Geraes NW. Length 380 ms., mean width 100; area 380,000 sqms. The tropical latitude and exposure to the Atlantic Ocean, renders this fine province capable of producing most of the vegetable staples of the highest value. Sugar is its chief production. Janeiro is its capital city.

Janeiro, Rio De, city of Brasil, and capital of the province of the same name, stands at the head of a large bay or basin, surrounded by lofty mountains. The opening of the harbour to the Ocean is about one mile wide, and is defended by fort Santa Cruz, built upon an immense mass of granitic rocks. The city rises like the steps or seats in an amphitheatre, and the houses built of stone along straight and well paved streets, produces a fine effect from the water. It is the mart of an immense and increasing inland trade. Population above 100,000. Lon. W. C. $35^{\circ} E.$ Lat. $22^{\circ} 56' S.$

Janissary, Cape of, ancient Sigeum promontory, the point on the Asiatic side of the mouth of the Hellespont. The village of Giaur-Keni occupies, it is supposed, the site of the ancient Sigeum. Giaur-Keni is sometimes called Yenicher.

Janna, province of Turkey in Europe, bounded on the N. by Macedonia, on the S. by Livadia, on the W. by Albania, and on the E. by Archipelago. It is the Thessaly of the ancients. Capital, Larissa.

Janna, town of Turkey in Europe, in a province of the same name. It is 62 ms. W. of Larissa. Lon. $21^{\circ} 36' E.$ lon. $39^{\circ} 48' N.$

Janikale, Janikaleh, or *Jenikale*, town, seaport, and fortress of Russia, in Taurida, and in the straits of Taman. It commands the passage from the Euxine, or Black Sea, into the Sea of Asoph. Lon. $36^{\circ} 25' E.$ lat. $45^{\circ} 21' N.$

Janowitz, town of Bohemia, in the circle of Kaushim, famous for a battle between the Swedes and Imperialists in 1645, when the latter were defeated. It is 48 ms. SE. of Prague. Lon. $15^{\circ} 38' E.$ lat. $49^{\circ} 45' N.$

Jao-tcheou-fou, city of China, in the province of Kiang-si, seated on the river Po, which at a small distance, enters the lake Po-yang.

Japan Islands, of Asia, between 30° and $40^{\circ} N.$ lat. and between 130° and $144^{\circ} E.$ lon.; the largest of which is called Japan, and sometimes Nippon, and gives its name to all the rest, being 600 ms. in length, and from 100 to 150 in breadth. Its capital is Jeddo. The second island in magnitude is called Sacock, or more correctly Sikkokf, and separated from the former only by a very narrow channel. It is about 500 ms. in circuit, and its capital is called Bougo. The third in magnitude is called Kiusu, and these are surrounded by a great number of smaller. The whole group averages about 90,000 sqms., and is peopled by at least 30,000,000 of inhabitants. It is the most exclusive and detached of all the civilized nations of the world. Much has been said, and, it is probable, little correctly understood, in Europe, respecting the government, religion, internal policy, and manners of this great nation. A secular and hierarchical emperor have been named, presenting a striking resemblance to Europe during the middle ages, and to Mahometan Asia, during the decline of the Califate, and affording a similar intricacy to bewilder and perplex foreigners, and to fill their observations with fable and absurdity.

According to Galownin, the latest European authority, the Japanese are remarkable for order, intelligence, and temperance, and the country for its culture and neat appearance. A prudent jealousy of Europeans has saved Japan

from the fate of Hindoostan, and mortifications of China. The country produces in itself nearly all the luxuries, and all the necessities of human life.

Japan has been, within this century, visited by several Europeans, who have published their observations. The Russians, Kruzenstern and Galowin, and an Englishman, Dr. Ainslie, are the most conspicuous; but it is probable, that neither have added much to what Kaempfer had published long before. Dr. Ainslie, and indeed most European authors who have spoken of the Japanese, represent this people as approaching rather to the European, than to the Asiatic standard of character. Nothing, says the doctor, so much offends a Japanese, as to be compared to a Chinese. The doctor might have found, in the feelings of his own countrymen towards the French, a very remarkable parallel to Japanese national antipathy. Dr. Ainslie also compliments the Japanese on their propensity to foreign intercourse. This is a most precious sample of description of a foreign people, and ought to afford us a standard of value to estimate similar documents. The Japanese, with a most prudent and praiseworthy caution, have persevered in exactly a contrary course of politics to that of encouraging European intercourse. There is, really, every reason to believe, that China and Japan might be opened to the commerce of Europe, with no more restriction than is imposed by European nations amongst themselves, if the Asiatic nations could be assured of the honesty or humanity of Europeans. As long as that insatiable thirst of conquest, and the more absurd and equally insatiable rage of religious proselytism, mark the conduct of Europeans, so long must their introduction into either China or Japan depend on force, and force alone. The example of India is too deeply engraven to be neglected.

Japara, seaport, on the N. coast of the island of *Java*, with a good harbour. It was the capital of a considerable kingdom, till the Dutch made themselves masters of it; and now they have a colony here, and a considerable trade. It is 253 ms. E. by S. of Batavia. Lon. $110^{\circ} 45'$ E. lat. $6^{\circ} 20'$ S.

Java, island of the E. Indies, lying to the S. of Borneo, and separated at its W. end from Sumatra, by the strait of Sunda. It is sometimes called Great Java, to distinguish it from Bali, by some named Little Java; and is 420 ms. in length, and of various breadth, extending from 105° to 118° E. lon., and 6° to 8° S. lat. After sundry revolutions, Batavia, and parts adjacent in Java, have returned to the possession of the king of the Netherlands. The land is low, and in some places marshy, near the shore, which renders the air unhealthy; but it rises in a gradual slope toward the interior of the country, admitting in its ascent every variety of situation and verdure. The N coast has a great many commodious creeks, bays, harbours, and towns, with many little islands near the shore. This island has very high mountains, particularly the Pepper mountain on the S. side; it has likewise impassable forests and wildernesses, but to the N., between Batavia and Bantam, is a very populous country, full of rice fields, and plenty of salt and pepper, beside most sorts of fruits proper to the climate. The serene season is from May till November; and then the rains begin, which lay the low grounds under water, kill the insects, and continue till May. In March they begin to sow, and in July the sugar and rice begin to ripen; but September and October are the best months for all sorts of fruits. Java has always been considered in a high degree unhealthy, but this observation applies correctly only to the sea coasts. The interior is in many places, high, airy, temperate, and healthful. The fruits, grains, and other vegetables of nearly all climates, are found on this island, but their culture depends upon suitable elevation.

Java-head, W. end of Java, towards the straits of Sunda.

Java Sea, lies between Java and Borneo.

Jerusalem, ancient and famous town of Asia, formerly capital of Judea, after David had conquered the Jubsites. It was taken by Nebuchadnezzar in the reign of Zedekiah, and the Jews were led captives to Babylon. It was afterward taken by the Romans, and ruined, together with the Temple, 70 years after the birth of Christ, after sustaining one of the most remarkable sieges in history. The emperor Adrian built a new city near its ruins. It was taken by the Persians in 614, and by the Saracens in 636. In 1099, it was retaken by the Crusaders, who founded a new kingdom which lasted 88 years, under nine kings. Saladin, king of Egypt and Syria, got possession of it in 1187. The Turks, who drove away the Saracens in 1217, have kept possession of it ever since, and call it *Heleods*, that is, the Holy City. It is now inhabited by Turks, Arabs, Jews, and Christians. It stands on a high rock, with steep ascents on every side except to the N. It is almost surrounded with valleys encompassed with mountains, so that it seems to stand in the middle of an amphitheatre. It is about 3 ms. in circumference, and includes Mount Calvary, which was formerly without the walls. On this hill is erected a large structure, with a round nave, which has no light but what comes through the top, like the pantheon at Rome. This is called the church of the holy sepulchre; at the entrance, on the right hand, is the place where the body of our Saviour was laid. The

table on which he was said to have been laid at first, is two feet and a half high from the pavement, and is now covered with white marble, because its visitors were for all carrying away a small bit. The chapel is cut out of the rock, and lamps are kept constantly burning in it. The whole is covered with white marble, both within and without; and on the outside there are 10 fine columns of the same. It is covered with a platform, the middle of which is exactly above the three holes, and forms a small dome, six feet in height, covered with lead, and supported by 12 columns of porphyry, placed by pairs on the platform, and forming six arches, which have three lamps under each. Before the gate of the sepulchre is a silver lamp, so large, that two men cannot fathom it. On Good Friday, all the parts of our Saviour's passion are solemnized in this church. The Christian pilgrims flock here from various parts, and the inhabitants accommodate them with lodging and provisions, which is their chief business; and a bashaw, with a guard of janissaries always resides here to protect them from the insults of the Arabs. Jerusalem was taken by the French under Bonaparte, in Feb. 1799. It is 112 ms. SW. from Damascus, and 45 from the Mediterranean sea. Lon. $35^{\circ} 26'$ E. lat. $31^{\circ} 50'$ N.

It is full of woods; and the inhabitants, who live by fishing and hunting, are strong, robust, savage, and slovenly when compared to the Japanese. The two islands to the NE. of Matmai, Kunachir and Zellany, and likewise the three still further to the NE., called the three Sisters, are perfectly independent. The Japanese give the name of *Jeso* to the whole chain of islands between Japan and Ramschatka. See *Kuriles*.

Jibbel Aures, mountainous, well watered and fertile district of Africa, in the province of Constantia, Regency of Algiers. Jibbel Auras, becomes very interesting as containing a remnant descended from the Vandals. In Arrow-smith's map of Africa, the Gebel Auras, are laid down at N. lat. 35° E. lon. $6^{\circ} 30'$ E. about 200 ms. SE. from Algiers. This is the *Aurasus Mons* of *Nepidia*, and the quarter where Geleiner king of the Vandals fled after his defeat by Belisarius.

"Mr. Bruce describes a very savage and independent tribe called Nardie (perhaps the same whom Abbe Poiret terms Nades, and of whom he gives a similar description,) residing near Jebbel Aurez, and dwelling in huts of mud and straw. They occupy a very rugged and inaccessible tract of country; and the great hazard of attacking them was expressed by one of their Marabouts by the strong figure of, "eating fire." They have a fair complexion, red hair, and blue eyes. They have the figure of a Greek cross, marked with antimony on their foreheads; and affirm that their ancestors were Christians. They seemed to rejoice more in that relation, than in any connexion with the Moors, and Mr. Bruce conceived them to be a remnant of the Vandals." *Brewster's Encyclopaedia*, Art. *Barbary*.

Joanpour, city of Hindoostan Proper, capital of a circar of the same name, in Benares. It is seated on the Goomty; and not far from the confluence of that river with the Ganges; the fort of Jionpour is a building of considerable extent, on a high bank commanding the bridge over the Goomty. It is now chiefly in ruins, although, formerly, it commanded the country, from the Ganges to Lucknow. The stone bridge over the Goomty consists of 16 pointed arches; and on the top of it are many little shops on both sides. It was built in 1567, upon such sound principles, as to have withstood, for such a length of time, the force of the stream, which, in the time of the rains, is very great. The inundations have been known to rise frequently over the bridge, insomuch that in 1774, a brigade of the British army passed over it in boats. Joanpour is 49 ms. NW. of Benares. Juan Fernandez, island in the S. Pacific Ocean, lying in 83° W. lon. and 33° S. lat. 300 ms. W. of Chili. It is uninhabited, but is found extremely convenient to touch at and water. There are instances of two men living alone at different times on this island for several years; the one a Musquito Indian, the other Alexander Selkirk, a Scotchman, who having been left on shore, in this solitary place, by his captain, lived here five years, till he was discovered by captain Rogers, in 1709. From this remarkable history, Daniel de Foe is said to have derived the hints which gave rise to his celebrated production, *The Adventures of Robinson Crusoe*. This island is not quite 15 ms. long and about 6 broad: its only safe harbour is on the N. side. It is said to have plenty of excellent water, and to abound with a great variety of esculent vegetables highly antiscorbutic; besides which commodore Anson sowed a variety of garden seeds, and planted the stones of plums, apricots and peaches, which he was, many years afterwards, informed, had thriven greatly; and new, doubtless furnish a very valuable addition to the natural productions of this spot.

Kamakura, island of Japan, about 3 ms. in circumference, lying on the S. coast of Nippon. It is here they confine their great men, when they have committed any fault; and the coast is so steep, that they are forced to be lifted up by the cranes.

Kamutarchinzes, is the name of a people in Tartary. In the year 1629, they were made tributary to Russia, and then led a rambling life. At present their habitations are in the neighbourhood of Kansk and Abakansk, two oostrogs, situated one on the Yenisei, and the other on the Kan. Even at the time that they submitted to Russia, they were only a scanty people, or rather, the remains of some ancient nation.

Kambala, Mount, ridge of mountains in Tibet, between Lake Palte, and the Burrampooter. From the top of this ridge may be seen, to the N., a range of still higher mountains, covered with snow. The foot of Mount Kambala, is 31 ms. S. of Lassa.

Kaminieck, very strong town of Poland, capital of Podolia, with two castles and a bishop's see. When the Russians seized part of the Polish territories in 1793, this fortress held out a long time, but at last surrendered to their arms. The castle is seated on a craggy rock, 85 ms. W. of Bracklaw, and 100 S.E. of Lemburgh. Lon. $26^{\circ} 30'$ E. lat. $48^{\circ} 58'$ N.

Kamtschatka, peninsula of Asia, formed by a chain of stony and barren mountains, which run toward the SSW. from that part of the continent inhabited by the Koraiks. It is bounded by the Eastern Ocean, the Gulf of Penschinskoi, and by the sea of Oghotzk; in all probability the Kourili, a range of isles which in many directions extend as far as Japan, are a part of Kamtschatka. It is situated between about 51° and 62° N. lat. The soil is stony, full of cold springs, destitute of the smallest piece of fertile ground, and so cold even in the summer, that the earth is totally unfit for culture, and of itself does not produce a sufficiency for the cattle. The Kamtschadales are for the most part of a low stature, with broad shoulders, large heads, long flat faces, flat noses, small eyes, thin lips, and short legs.

Kamtschatkoi, Niznei, town of Siberia, capital of Kamtschatka, with a citadel, arsenal, and barracks. It is seated on the N. side of the

Kent, one of the cties. of Eng., situated at the SE. corner of the island, and from thence enjoying many advantages. As to the climate of this country, it varies according to the situation of places. There is no region more happily or more beautifully diversified in regard to soil, so that every kind thereof is, somewhere or other, to be met with in its bounds; and in no shire are any of those soils more fertile than they are in this. The Weald yields variety of fine time timber, particularly of chesnut; the middle part has very rich arable land, annually bearing every species of grain in immense plenty, and these excellent in their several sorts. There are also many beautiful orchards, which produce a variety of fine fruits, and more especially apples and cherries, which were introduced here from Flanders. The many rich commodities produced in this cty. is the reason why most of our writers have represented it as in a manner void of manufactures, which, however, as appears upon a strict and impartial examination, is very far from being the case. Of iron works there were anciently many; and there are still some, where kettles, bombs, bul-

lets, cannon, and such like, are made. The principal rivers besides the Thames, are the Medway, Darent, Stour, Gray, and Rother. Maidstone is the city. Pop. 1801, 307,624; in 1811, 373,995; and in 1821, 426,016.

Kent, city, of L. C., commencing opposite Montreal, and extending down the St. Lawrence about 11 ms., and S. to the boundary of Bedford city.

Kent County, U. C., comprehends all the country (not being the territory of the Indians) not already included in the several cities herein described; extending northward to the boundary line of Hudson's Bay, including all the territory to the westward and southward of the said line, to the utmost extent of the country commonly known by the name of Canada.

Kent, city, R. I., bounded by Conn. W., Providence city. N., Narraganset bay E., and Washington S. Length 23 ms., mean width 9; area 207 sqms. Surface waving rather than hilly. Soil productive in fruits, grain, and pasturage. Chief town, Warwick. Pop. 1820, 10,228. Ctl. lat. $41^{\circ} 42'$ N. lon. W. C. $5^{\circ} 26'$ E.

The greatest length of Kentucky, is from the SW. angle of the state on Mississippi river, to the head of Great Sandy river 380 ms.; mean width 99 ms.

Extreme south, N. lat. $36^{\circ} 30'$; extreme north, at the Great Miami bend, $39^{\circ} 5'$.

It is obvious by a simple inspection of its great features, that Kentucky must present considerable diversity of soil and climate. On its SE. border, it is limited by Cumberland mountain, from which most of its streams take their source. Unlike the opposite slope of the Ohio valley, no table land, in the true meaning of the term, exists on that on which Kentucky is placed.

In point of soil the state is divisible into three portions; the mountainous, hilly, and level. The mountainous section of Kentucky, is of small and unimportant extent, being limited to the region towards the sources of Cumberland, Kentucky, Licking, and Great Sandy rivers. If all the SE. angle of the state is taken as mountainous, it will not amount to one-fourth the area of the whole. But, though the mountains are not very elevated, this part of the state is very broken, and generally sterile soil.

The second, or hilly section, follows the mountainous, and is much more extensive. The hilly natural subdivision spreads over, in fact, much the greater part of the state, reaching from the Ohio river between Great Sandy and Licking rivers, and the border of Ten. nearly as low down as Ohio, below the mouth of Salt river.

From analogy it might be expected, that on the left as well as right slope of Ohio valley table land would be found. This is not, however, the fact; so far otherwise is the face of the hilly part of Kentucky, that in no part of the U. S. is the earth so broken by abrupt steps, nor where the water courses have cut channels so deep in proportion to quantity of water, and length of course. In their natural state, before the settlement of the whites these vales were overgrown with a thick forest under which grew brakes of the reed cane and rendered this part of Kentucky the most impenetrable to the footsteps of man, of any part of the N. American forest, yet attempted. On the level bottoms of Lou., the large cane brakes are extremely difficult to pass, but it

on uneven ground that this gigantic grass renders human effort to penetrate its recesses, to the last degree painful and slow. The cane brakes, however, like the wild animals they once sheltered, disappeared before civilized man. In Kentucky this fact has been realized in a very striking manner. The buffalo, deer, bear, elk, and the *Arundo gigantea*, have in great part vanished; and in their places farms, orchards, meadows, towns, and villages have arisen.

I have more than once remarked the curious circumstance, that in the Ohio valley, most of the hills were fertile to their summits. This characteristic is very striking in that part of Kentucky we have under review; it is so peculiarly so, that the hills are in many places more fertile than the bottoms. The prevailing timber of the hills is chestnut, hickory, poplar (*Liriodendron tulipifera*), sugar maple, elm, and hackberry. In the bottoms the timber is fearfully similar, though larger.

As the rivers advance in their progress toward their common recipient, they pursue through the mountainous and hilly tracts we have noticed, nearly a W. course, but are all less or more inflected to the northward, at a considerable distance before their final discharge into the Ohio. The uniformity of their curves must have arisen from some feature in the surface of the original plain, into whose surface their channels are worn. The rivers of the right slope of the basin, are remarkable for all having courses not deviating much from N. and S. Those of the left, in the lower or inferior part of their courses, flow nearly M.

The rivers of Kentucky, are more characterized than are even those of Ohio and Ind., by the deepness of the vales, or ravines, they have formed out of the secondary strata over whose surface they flow. The substrata of Kentucky is limestone in the far greater part, into which the rivers have worn precipitous channels.

Below the great bend of its rivers, the physiognomy of the country changes from sharp, high, steep hills, narrow, deep, and gloomy valleys; to a comparative rolling or even level country. Though on a smaller scale, than the expansive tracts of fertile soil on the opposing slope, this part of Kentucky is amongst the most desirable in the U. S. It is the only part of Kentucky, which assumes any of the attributes of a table land. The soil is extremely fertile, but in many places so very shallow as scarce to admit the growth of large trees. Its base is one immense floor of secondary or floetz limestone. This region may be said to occupy the central parts of the state, from the waters of Green river to those of Licking, inclusive, and contains the best peopled part of the state. A want of spring water is found in many parts of this range, a common deficiency of all places where carbonate of lime prevails to the exclusion of other rocks. Water, perhaps in equal quantity, but unequally distributed. Springs of immense volume occur, and are followed by wide spaces where none are found.

Advancing SW. through Kentucky, the central table land we have under review gradually becomes more level and less fertile. The natu-

ral timber trees on the NE. part, are *Liriodendron*, elm, black walnut, honey locust, buckeye, papaw, cotton wood, and wild cherry. This forest growth prevails on the middle waters of Licking and Kentucky; the heads of Salt and Green rivers. It is followed toward Ten. by the "Barrens," an area wooded by oak, chestnut, elm, &c. The barrens are interspersed by other species of soil, by broken, and what is called the oak knob districts. In fact, the latter term much more appropriately marks the character of this section of Kentucky, than does barrens. The hills are here round, gently sloping, and deviate in a striking manner from the common ridge form of a hilly country.

The substratum continues to be as to the NE. flat imbedded limestone.

Approaching towards the Ohio river the true superstructure of the basin again appears, as we have seen on the opposing slope. The rivers having found their way from the mountains over the hilly and central table land, their channels become deeper. From Great Sandy to its mouth, the aspect of the two opposing banks of the Ohio river are alike, and all the observations made in any general view, or particular survey of Ohio, Ind., and Ill., applies with equal correctness to Kentucky. A very hilly broken border, of about 25 or 30 ms. wide, following the inflections of Ohio river, skirts the state from Great Sandy to the mouth of Cumberland river. This border is the buttress of the Kentucky slope, fractured, if such a term can be admitted, by the abrasion of the waters flowing from the interior. Though not obstructed by falls, or even remarkable rapids, the streams of Kentucky flow with great velocity, occasioned by the considerable inclination of their plane of descent. The space between the mountains and Ohio river has a small declivity, but the great depth of the bed of the latter river has given so much pitch to the water, that every stream has formed for itself a channel, whose declivity corresponds to the comparative depression, between their sources and recipient. The apex of the hills within 3 or 4 ms. from the Ohio river, is little if any below that of those far in the interior. The humble elevation of the interior hills is in relation to their base; if taken above Ohio river, their height would nearly correspond to those near that stream.

We may, therefore, on leaving Ohio river, conceive ourselves rising rapidly to a level with the general surface. We find the waters flowing in enormous chasms, lined by limestone walls of from 100 to 300, or 400 feet deep. These chasms become less profound as we advance towards the mountain sources. Near the Ohio we meet with innumerable gushing springs of water, which as we ascend the central table land become more rare. We again find these fountains increase, as we proceed on our way to the mountain border.

Over all the wide extent of Kentucky, the only really level surface of note is the bottoms of Ohio. Those bottoms are, in every place where they occur, perfectly similar in structure, and generally uniform in their texture. But the bottoms on the Ohio, in much the greater part, fall backwards toward the hills, at the base of

which, small ponds and marshes are frequent. But few instances of a regular acclivity from the water edge exist on the Ohio. In this instance this river differs essentially from most streams on the Atlantic slope, and particularly from the St. Lawrence. These ponds along the base of the Ohio hills superinduce bilious complaints in autumn. They are however, easily drained, and the beneficial consequences of such melioration on the face of nature, are felt at Louisville and other places, where such works have been executed.

As the bottom lands of Ohio constitute so remarkable a feature in the topography of the U. S., and as Kentucky embraces the largest share of this species of soil, I have reserved to the present, to introduce its particular description. The natural position of Ohio river, and the process of its formation has been amply discussed. It has been shown that that stream and all its confluent, owe their existence to the wearing away of a primitive plain. It has been also noticed that this process must have been gradual and of very long continuance.

The vale of Ohio, at the city of Pittsburgh is 460 feet deep; and this depth diminishes in proportion to an advance towards the lower termination of the vale, and at the junction of Ohio and Mississippi rivers, the water is but little depressed below the level of the adjacent bottoms.

Evidence of the periodical recession of the water is every where seen in the bottoms. In most places there are two, and in some places three stages of bottoms, elevated above each other 15, 20, or 25 feet. The first, or lowest stage, is yet subject to immersion, at the period of very high floods, the second and third have long ceased to be liable to inundation.

Newport, and Covington, the former above, and the latter below the mouth of Licking river, opposite Cincinnati, are on first bottoms.

Louisville; at the rapids of Ohio, stands on a first bottom, more than usually elevated, but falling in the rear into low ponds,

In general the towns along the margin of Ohio, except at the mouth of rivers, are on second bottoms. Below Louisville the hills are so much declined in elevation, as to render that place a point of separation between the bold and rich scenery above, and the more humble and less variegated landscapes below that place. It is also a point where the bottoms commence a change from the stair-form we have described, to the flat and monotonous aspect of the shores of the Mississippi. From the apex of the hills on one side, to those on the other, the distance is about two ms., three-fourths of which is occupied by the river and slopes of the hills, leaving about half a mile, or 880 yards, for the breadth of the bottoms. The length of Ohio is 848 or in round numbers 850 ms., which at half a mile wide would yield 425 sqms. of bottom land. This amounts to only 528,200 acres, much less than is commonly believed, though I am all convinced falls little if any short of the quantity. As to fertility, no description can exceed reality; this range is no longer the most productive in the northern zone. Its natural indigenous

forest trees indicate a soil of the very highest strength of production. The most prominent species are oaks, elms, ash, and hickory, of every variety; black and white walnut, liriodendron, sugar-maple, linen, cotton-wood, and sycamore, with an underwood of papaw, dogwood, and spice. Every vegetable which the climate will admit, can be produced in abundance. We may dismiss the subject at present by observing, that in point of climate, the Ohio itself ranges through three degrees and forty minutes of latitude. The mouth of Big Beaver being in N. lat. 40° 40', and the mouth of Ohio N. lat. 37°. Of this climatic expanse, Kentucky embraces two degrees and eight minutes of latitude.

We have now surveyed Kentucky and have found the features of nature exhibited on its surface to be in accordance with those of other parts of the basin in which it is situated. We have found a much more varied physiognomy than that country is commonly allowed to possess. It is a region, indeed, which well deserves the attention of the philosopher and statesman; it is interesting to the former from its peculiar structure and productions, and to the latter from its commanding position.

Politically, Kentucky is subdivided into the following counties:

| Counties. | Sqm. | Inhabitants. | To sqm. |

Of this population, 2,759 are free blacks, and 126,732 are slaves, leaving a white population of 434,826.

The different members of this mass, according to the census of 1820, were classed thus:

| | | |
|----------------------------|---|---------|
| Foreigners not naturalized | - | 529 |
| Engaged in Agriculture | - | 132,161 |
| do. Manufactures | - | 11,779 |
| do. Commerce | - | 1,617 |
| | | 146,086 |

Those cities, the pop. of which are not marked, have been formed since the last census was taken.

Lawrence cty. was formed out of Greenup; Hickman, between the state of Tenn., and Tennessee, Ohio, and Mississippi rivers; Pike from Floyd, and Perry from Clay.

The principal productions of Kentucky, are wheat, flour, Indian corn, salted provisions, live stock, tobacco, hemp, and salt. Manufactures of various kinds have risen to considerable extent, particularly coarse cloths and cordage. The commercial outlet of Kentucky is the Mississippi river.

The interests of education have received considerable attention in this state, the Transylvania is a comparatively recent but a really respectable institution. According to a report of the Professors in this seminary, dated Febru-

ary 11th, 1822, the school of Medicine presents, "all the means requisite for a complete course of medical education, conducted in the usual academical form.

The Library of the Institution is select and valuable, containing in various languages, the standard and most esteemed works in medicine, both ancient and modern, with no inconsiderable number of the same rank in the several collateral branches of science; the chemical apparatus is, in many respects, not inferior to any in the U. S.; and the anatomical museum, already rich in matter of instruction, will be rendered much more so, by additions which it will receive from Europe in the course of the summer. The lecture rooms are also spacious, comfortable and commodious.

Courses of lectures are delivered on all the branches of medicine taught in the oldest schools of our country.

The price of subsistence is unusually moderate, and accommodations excellent, the situation exceedingly healthy, and, in intelligence, morality, and refinement, the society not surpassed by that of any other town in the U. States.

The lectures will commence annually, on the first Monday in November, and terminate early in the month of March.

To be entitled to present himself a candidate for the degree of Doctor of Medicine, a pupil must be twenty-one years of age, and have attended two full courses of lectures—one of them at least, in this institution.

But any Physician who shall have practised his profession with reputation for the term of four years, may become a candidate after attending one full course of lectures in this school."

The charter of a second university, to be located at Danville, was granted by the Legislature, in 1819.

Kentucky, river, rises in Floyd cty., in the spurs of Cumberland mountain, interlocking with the sources of Licking and Big Sandy, and opposite to those of Tenn. The general course of Kentucky river is NW., and by comparative courses 200 ms. through, or bordering on Floyd, Perry, Estill, Clarke, Madison, Fayette, Jessamine, Garrard, Mercer, Woodford, Franklin, Shelby, Owen, Henry, and Gallatin cities. It enters Ohio at Point William, and in times of flood is navigable by the windings of the stream about 150 ms.

Keratea, village of Greece, in Attica, SE. from Athens, about 15 ms. It is inhabited by Albanians, and contains about 250 houses; situated near, though not on the Saronic Gulf, and at the foot of a range of mountains, called Parne. From a hill behind Keratea Mr. Hobhouse obtained a "commanding prospect, including the southern extremity of the Negropont, Macronisi or Long Island, near the eastern coast, as far as Sunium, and several islands to the south of that promontory. The two ranges of Hymettus were distinctly seen."

Mr. Hobhouse, upon what authority he does not state, gives the name of Keratea to the spurs of Cithaeron north from Eleusis.

Kerbela, ancient Vologesia, town of Irak Arabia, on the W. bank of the Euphrates, about 50 ms. SW. from Bagdad.

Kittatinny valley, is the valley between the Kittatinny range and Blue Ridge: In Penn., this valley varies from 8 to 15 ms. wide, and is uniformly composed of a limestone base towards the Blue Ridge, and of clay slate on the side of Kittatinny mountain. The line of separation, between those two rock formations crosses Delaware river about 20 ms. above Easton; the Lehigh at the slates about 5 ms. above Allentown; the Schuylkill above the mouth of Maiden creek; the Susquehanna in the borough of Harrisburg, and the Potomac near the mouth of the Connecocheague. In Virg., the line of division nearly corresponds with Opequan creek between Jefferson and Berkeley cties. It is a common, but very erroneous opinion that the whole of this valley is based on limestone; that rock, is, however, confined to the SE. side.

Kubesh, large strong town of Lesghistan, near the western shore of the Caspian sea, situated on a hill between high mountains. Its inhabitants call themselves Franki, (Franks, a name common in the E. to call Europeans,) and relate that their ancestors were brought hither by some accident, the particulars of which are now forgotten. The common conjecture is, that they were mariners cast away upon the coast; but they who pretend to be better versed in their history, tell the story this way. The Greeks and Genoese, say they, carried on during several centuries, a considerable trade, not only on the Black Sea, but likewise on the Caspian, and were certainly acquainted with the mines contained in these mountains, from which they drew by their trade with the inhabitants, great quantities of silver, copper, and other metals. In order to work these upon the spot, they sent hither a number of workmen to establish manufactures, and instruct the inhabitants. The Kooveshes, or Kubeshes, seem to be the most respectable people found between Persia and Russia. They are the merchants and brokers, between these countries. In the year 1725, their magistrates,

It is divided into 41 parishes, and the number of inhabitants in 1801 was 146,689; in 1811, 191,752; and in 1821, 234,387. It sends one member to parliament. The river Clyde runs through the whole extent of the cty., dividing it into two nearly equal parts; the southern part a mountainous district, generally called Clydesdale. It abounds in lead, iron, and coal.

Lancashire, cty. of Eng., bounded on the N. by Cumberland and Westmoreland, E. by Yorkshire, S. by Cheshire, and W. by the Irish Sea. It is 74 ms. from N. to S., (including a detached hundred on the NW., called Furness, which is separated from the rest by a creek, at the head of Morecambe bay) and its greatest breadth is 44 ms. It contains 1,150,000 acres; is divided into six hundreds, and 63 parishes; has 27 market towns; and sends 14 members to parliament. The number of inhabitants in 1801 was 672,781; in 1811, 828,309; and in 1821, 1,052,859. It is a county-palatine, under the title of the duchy of Lancaster; the only duchy of Eng. (that of Cornwall excepted) which is not merely titular. Lancashire is little adapted for a corn country, but is singularly fitted for the growth of potatoes. Among its products is a species of coal, called cannel, far exceeding all others not only in making a clear fire, but for its capability of being manufactured into candle sticks, cups, standishes, snuff-boxes, &c. As a commercial and manufacturing cty., it is superior to any other in the kingdom. Its principal manufactures are linen, silk, and cotton goods; flintans and counterpanes, shawls, bays, serges, tapes, hats, canyass, sickles, iron goods, plate glass, &c. Of the commerce of the cty., it may suffice to observe, that Liverpool is the second port in the kingdom. The principal rivers are the Mersey, Irwell, Ribble, Laine, Levern, Wyre, Hodder, Great Oulton, and the Mersey, and it has two considerable lakes, Windermere and Conistone-mere. It has also numerous canals, and the honour of exhibiting the first regular navigation in the kingdom, which was begun by the opening of Bridgewater in 1758.

Lapland, or the extreme northern part of Europe. It is divided into Russian and Swedish Lapland.

Russian Lapland extends E. from Tornea and Tana rivers, to the White Sea, under the name of the circle of Kola.

Swedish Lapland embraces the residue, including the extreme North Cape of Europe, and is subdivided into Tornea-Lapmark, Lulea-Lapmark, Pithea-Lapmark, Umea-Lapmark,

Jamptland-Lapmark, Asscle-Lapmark, and Finmark.

The whole of Lapland stretches over 150,000 sqms., of which Sweden possesses about 80,000, with 33,000 inhabitants, and Russia 70,000 sqms. and 27,000 inhabitants. Lapland may be termed a huge congeries of frightful rocks, and stupendous mountains; interspersed, however, with many pleasant valleys, watered by an infinite number of rivulets that run into the rivers and lakes, which discharge themselves into the Gulf of Bothnia. The names of the principal lakes in Lapland are, the Great Uma, the Great Windel, the Oreavan, the Stor-avan, the Great Lula, the lakes of Kartom, Kali, Torno, Enara, and Limi. Some of these extend 60 leagues in length, and contain a great number of islands; Storavan is said to contain 365; and Enora contains an archipelago of islands so large, that no Laplander has lived long enough to visit each particular island. The natives believe this country to be the terrestrial paradise; and indeed nothing could be more enchanting than such vast prospects of mountains, hills, forests, lakes, rivers, &c. if the country was in a moderate climate; though even here, in summer, the roses are seen blowing wild on the banks of lakes and rivers, with all the beautiful glow of colour, which appears in those cultivated in our gardens. But all the intervals between the mountains are not engrossed by these agreeable prospects; great part of the flat country is covered with brown dusky forests of fir and pine trees, and these are often skirted by wide extended morasses, the stagnating waters of which in summer produce myriads of mischievous insects, that are more intolerable than even the cold of winter. The cold in this country is very intense during the winter, freezing even brandy and the watery part of spirit of wine, if the latter is not highly rectified; all the lakes and rivers are frozen to a prodigious thickness; and the whole face of the country covered with snow. The heat of summer is almost as intolerable as the cold of winter. At the northern extremity of the country, the sun never sets for three months in summer, and in winter there is an uninterrupted night of the same duration; but this is qualified in such a manner by a constant revolution of dawn and twilight, by a serene sky, moonlight, and aurora borealis, reflected from the white surface of the earth covered with snow, that the inhabitants are enabled to hunt, fish, and proceed with their ordinary occupations. The country abounds with excellent springs; and is remarkable for some surprising cataracts, in which the water rumbles over frightful precipices and dashes among rocks with amazing impetuosity and noise. Its soil is generally so chilled and barren that it produces little or no grain or fruit trees of any kind. This sterility, however, is not so much owing to the soil, which is in many places of a rich mould, as to want of industry, and the rigour of the climate.

In stature, appearance, and manners, the Laplanders are evidently a branch of the family so extensive within, and contiguous to the Arctic regions. The Samoids, Laplanders, Greenlanders, and Eskimaux, are the great divisions of this race.

Leghorn, city of Tuscany. It has one of the best harbours in the Mediterranean: its commerce is prodigious. The Jews, who are nu-

merous and rich, have a handsome synagogue and schools; the Greeks and Armenians have churches of their own: and no religion is disturbed. The inhabitants are computed at 50,000. The streets are wide and straight, and almost all the houses of the same height. There are so many canals, that some have given it the title of New Venice. Near the harbour is a large building, in which they shut up every night the Turks and galley slaves. At a little distance is a light-house, on a small island. The trade consists of foreign goods, as cotton, sugar, cocoa, spices, sulphur, and alum; and in home productions, as essences, oils, wine, straw-hats, cloth, juniper berries, oranges, lambs' and goat's skins, and coral. In 1741, this city suffered greatly by an earthquake. It is 145 ms. NW. of Rome, and 46 W. of Florence. Lon. $10^{\circ} 28' E.$ lat. $43^{\circ} 33' N.$

Lehigh, river of Penn., the NW. branch of the Delaware. Its extreme northern sources are in the southern part of Wayne cty., and in Luzerne, near Wilkes Barre. Augmented by many mountain streams, it flows SW. by comparative courses 25 ms. to the mouth of Wrights mill creek; it thence turns to nearly S. by a serpentine course, but in a direct distance of about 20 ms. to Lehighton. Here it inflects to SE., and continues in that direction, 25 ms., to Allentown, or Northampton. At Allentown it once more turns nearly at right angles, and flows NE. 15 ms. to its entrance into the Delaware at Easton. The entire comparative course of this stream is 85 ms. From near its source to Trout creek it separates Pike and Luzerne cties. From Trout creek to Rock Eddy fall it separates Northampton from Luzerne cty. Below the Rock Eddy falls to its passage through the Blue or Kittatinny mountain, its course is within Northampton cty. Between its passage through the mountain, and the mouth of Hookendocque creek, it forms the limit between Lehigh and Northampton cties. Below Hookendocque creek to Bethlehem it flows through Lehigh, and below Bethlehem to Easton in Northampton.

The Lehigh is truly a mountain stream, and meanders through a series of natural scenes, not excelled if equalled in the U. S. The following table will exhibit its descent from Stoddardsville to its mouth.

The Lehigh Coal and Navigation company have been for several years employed to render this stream navigable from the mouth of Mauchunk creek to Easton, in order to transport to Philadelphia and other places, the immense treasures of anthracite coal imbedded in a mountain, about 9 ms. from the mouth of the creek. See *Mauchunk*, and *Northampton* *cty.*

Lehigh, *cty.*, Penn., bounded SE. by Bucks, SW. by Montgomery and Berks, NW. by Schuylkill and Northampton, and NE. by Northampton. Length 25, breadth 13 ms.; area 335. The surface of this *cty.* is highly picturesque and varied. Except the two southeastern tps., Upper Milford and Upper Saucon, the residue of this *cty.* lies in the valley between South Mountain and the Blue or Kittatinny mountain. The valley section is nearly equally divided between the Limestone and Clay slate formations so frequently mentioned under various articles in this Gazetteer. The soil, particularly on the limestone tracts, is excellent. The whole *cty.* with but partial exceptions is well adapted to the culture of grain, grass, and fruits, though in many places the surface is excessively broken. Staples, grain, flour, whiskey, fruit, salted meat, &c. Chief town, Allentown or Northampton. Ctl. lat. $40^{\circ} 38'$ N. lon. W. C. $1^{\circ} 25'$ E.

Lehigh, village in Northampton *cty.* Penn., on the W. bank of the Lehigh river, about half a mile above the mouth of Mahoning creek. It is 56 ms. WNW. from Easton. In the neighbourhood of this village are some very strong chalybeate springs. The vicinity is in the highest degree romantic, and from the elevation of the ground, might become a most salubrious and eligible watering place in summer. The Stone Coal landing, or Mauchunk, is 3 ms. above, on the same side on the Lehigh. Near this town stood the old Moravian settlement of Gnaden Hutten, on the N. bank of the Mahoning, about 100 perches from its mouth, where the old church is still standing. Here a treaty of amity was held in July, 1752, between the Moravian brethren, and the Shawnee Indians; and on the 24th of November, 1755, the brothers and sisters were surprised and murdered by a party of French Indians. Their grave is still marked by a large stone, with a most pathetic inscription: the grave is on the hill, to the S. of the village. Nearly opposite Gnaden Hutten, on the E. side of the river, stood old fort Allen. There is a wooden bridge across the Lehigh, 214 feet long, and 25 feet wide.

Leibnitz, town of Germany, in Stiria; seated on the Sulm, 16 ms. S. of Gratz.

Leicester, borough of Eng., and the capital of Leicestershire, governed by a mayor. The combing and spinning of wool, and making it into stockings and other articles, is the chief business of this town and neighbourhood. A canal passes hence by Loughborough to the river Trent. At a parliament held here, in the reign of Henry V. was made the first law for the burning of heretics. In the meadows near the town, are the ruins of an abbey, in which cardinal Wolsey died. In 1811, Leicester contained 23,146 inhabitants. It is seated on the Soar, 23 ms. S. by E. of Derby, and 98 NNW. of London. Lon. $1^{\circ} 8'$ W. lat. $52^{\circ} 38'$ N.

Leicestershire, *cty.* of Eng. 38 ms. long and 30 broad, bounded on the N. by Nottinghamshire, E. by the counties of Lincoln and Rutland, S. by Northamptonshire, SW. by Warwickshire, and NW. by Derbyshire. It contains 522,240 acres, is divided into six hundreds, and 196 parishes, has 12 market-towns; and sends 4 members to parliament. In 1811, the number of inhabitants was 150,419. The chief rivers are the Avon, Soar, Wreke, Anker and Welland; and it has several canals. The sheep bred here, and in Lincolnshire, are the largest mutton with which the London markets are supplied, and have the greatest fleeces of wool of any in Eng. Nor is the wool less fine on account of its quantity; it has the longest staple in the whole island, some few places excepted. The horses bred, or rather fed here, are the largest in Eng., being generally the great black dray horses, of which great numbers are continually sent to London. The manufacture of stockings is the principal one in the *cty.* Pop. 1801, 131,081; in 1811, 150,419; and in 1821, 174,571.

Leith, seaport of Stld., on the frith of Forth, 2 ms. NNE. of Edinburgh, of which it is the port. It is situate at the mouth of the river Leith, which forms the harbour, and divides the town into N. and S. Leith, which communicate by a draw-bridge. The harbour is secured by a noble stone pier at the mouth of a little river, called the Water of Leith; and is accommodated with an elegant draw-bridge and a good quay. The commerce of Leith is very considerable; and the vessels employed in the London trade are, in general, of a large size, but the largest ships are those employed in the Greenland whale fishery. To Germany, Holland, and the Baltic, are exported lead, glass ware, linen, woollen stuffs, and a variety of other goods; as also to the other countries of Europe, the W. Indies, and America. Ships of great size are built at this port; and here are several extensive ropewalks. There are also flourishing manufactures of bottle-glass, window-glass, and crystal; a great carpet manufactory, a soap-work, and some iron forges. There are three churches in Leith, and an ancient hospital for disabled seamen. Lon. $3^{\circ} 7' W.$ lat. $56^{\circ} N.$

Liakura, ancient mountains of Parnassus. Liakura is only a corruption of Lycoréa, ancient name of the snowy summits above Delphi.

Parnassus is not so much a single mountain, as a vast range of hills, which was once the western boundary of Phocis, and the line of separation of the Locri-Ozolae, and the Locri Opuntii and Epicnemidii, and is now the limit

between the districts of Salona, and Livadia. The two tops have a sort of poetical existence, but the summit of the crags separated by the chasm of Castalia, must have been those dedicated to Apollo and the Muses, and to Bacchus, as the mountain itself is not notorious for this singularity. To go from Castri to the summits of Liakura, there is a rocky path, beginning a little to the E. of the ruined stadium. For the first two or three miles, the ascent leads up a water course; there is then a plain to the right, in the direction of the Castalian precipices. These, and some other flat spots, according to Benjamin of Tudela, were cultivated about A. D. 1170, by some Jews, who gave the name of Jerusalem, to a village on the mountain. The path continues to ascend a hill covered with pines; then passes over a plain 4 or 5 ms. in compass, to the foot of a craggy peak, where there is a strong bubbling spring called Drosogio, flowing into a lake a quarter of a mile to the SE. Higher than this, no traveller has ventured to go; the peak is covered with perpetual snow; and Wheeler, who went to the spots mentioned, thought the extreme summits, called formerly Licoréa, were as high as Mount Genis. If viewed on a map of that part of Europe, and which extends sufficiently to the N. to embrace the great chain of Haemus, Parnassus, or Liakura, appears simply as a continuation of Pindus, or Metzovo. From Liakura flows to the NE., the branches of the Boeotian Cephissus, and to the SW., the petty streams flowing into the Gulf of Lepanto.

Lithuania, former name of an extensive country of Europe; bounded on the S. by Volhinia and part of Red Russia, on the W. by Uppe Poland, Polacia, Ducal Prussia, and Samogitia on the N. by Livonia, and on the E. by Russia. It is about 300 ms. in length, and 250 in breadth.

and is watered by several large rivers, the principal of which are the Dnieper, the Lewina, the Niemen, the Pripecz, and the Bogg. It is a flat country, like Poland; and the lands are very proper for tillage. The soil is not only fertile in corn, but it produces honey, wood, pitch, and vast quantities of wool. This, perhaps, is the only country in Europe, where Jews cultivate the ground. The peasants are in a state of the most abject vassalage. In 1772, the empress Catharine compelled the Poles to cede to her all that part of Lithuania, bordering upon Russia, and including at least one-third of the country. This she erected into the two governments of Polosk and Mohilef. In 1793, in conjunction with the king of Prussia, she effected another partition of Poland, in consequence of which she extended her dominions over the whole of Lithuania. It forms at present the Russian governments of Wilna, Grodno, and Minsk.

Litz, pstv. and Moravian settlement, Lancaster cy. Penn., about 7 ms. N. from the city of Lancaster. This village was founded in 1757, and though small, has the appearance of quietness and neatness, characteristic of the sect by which it is inhabited.

Livermore, pst. Oxford cty. Maine, 18 ms. N. E. from Paris. Pop. 1820, 2134.

Liverpool, borough and seaport of Eng. in Lancashire. It had but one church, which was a chapel of ease to Walton, (a village 3 ms. off,) till the year 1699; when an act passed to make the town a distinct parish, and erect a new church; since which time, it has been gradually advancing in population and trade. The number of inhabitants in 1773, was 34,407, in 1790, it was 55,732, in 1801, 77,653, and in 1811, no less than 94,376. Its rise and increase was owing to the salt-works, but more particu-

larly to American commerce; and it is now become, with respect to population and commerce, the second port in the kingdom. It is seated on the river Mersey, and has a harbour, formed with great labour and expense, here being 8 wet docks, secured by large flood-gates, bound by keys, a mile and a half in length, where 1000 vessels, or 200,000 tons of shipping, may lie in the greatest safety. The trade of Liverpool is general; but the principal branch is the African and West Indian trade. The American, Baltic, and Portugal commerce, is also very great, as well as that of Ireland; many ships are sent to the Greenland whale fishery; the coasting trade employs a great number of vessels, and many good ships are built here. By the late inland navigation, Liverpool has communication with the rivers Dee, Ribble, Ouse, Trent, Humber, Severn, and Thames. Its principal manufactures are fine porcelain, earthen ware, watches, and stockings, some glass, iron, salt, and copperas works, many roperies, and upwards of fifty breweries. The exchange is a handsome modern edifice of stone, with piazzas for the merchants; and over it is the town-hall. There is also a handsome exchange, a custom-house, an assembly room, an elegant theatre, a library, and a borough jail on Mr. Howard's plan. Beside the two parochial churches, there are ten other churches for the established religion; also Roman Catholic chapels, and dissenting meeting-houses. To enumerate the asylums for the wretched and unfortunate of every description and denomination, would far exceed our bounds. Liverpool is 48 ms. S. of Lancaster, and 202 NW. of London. Lon. 3° W. lat. 53° 22' N.

Loire, the principal river of France, which rises in the mountains of the Cevennes in Languedoc. It begins to be navigable at Roanne; is joined to the Seine by the canals of Briare and Orleans, and falls into the bay of Biscay, below Paimbœuf. The basin of the Loire lies in the central and finest part of France. This river has a comparative course of about 450 ms., but like most other rivers of southern and western Europe, has but little tide navigation.

Loire, department of France, contiguous to the departments of Rhone, and Isere. Chief town, Montbrison.

Loire and Cher, department of France, including the late province of Blaisois. It takes its name from the rivers Loire and Cher; the first of which falls into the Sarthe, above Angers; and the last empties itself into the Loire, 5 ms. above the confluence of the latter with the Indre. Blois is the capital.

Loire, Lower, department of France, containing part of the late province of Bretagne. It has its name from the river Loire, which forms its S. boundary, and then falls into the Bay of Biscay. Nantes is the capital.

Loire, Upper, department of France, late the province of Velay. It takes its name from the river Loire, which rises near its S. boundary. Puy is the capital.

Loiret, department of France, late the province of Orléanois. It takes its name from a small river that falls into the Loire. Orleans is the capital.

Lombardo, Venetian kingdom, name imposed on Austrian Italy by the congress of Vienna, 1815.

Lombardy, name formerly given to part of Italy, and which comprehended almost all the ancient Cisalpine-Gaul. It lies towards the N.

and was divided into the Upper and Lower; Upper Lombardy was the western part, and comprehended Piedmont, with its dependencies and the duchies of Montferrat and Milan. Lower Lombardy, which was the eastern part, comprehended Parma, Modena, Mantua, Ferrara, the Bolognese, the territories of the church, the Paduan, Vicentin, the Veronese, the Bressan, the Cremase, and the Bergamese.

Lomond, Ben, mountain of Sld., in the N. of Stirlingshire, about 3200 feet above the level of the lake, at its bottom. From this lofty mountain are seen Loch Lomond, the Clyde, the Forth, Edinburgh, the eastern coast as far as the Cheviot Hills, the isles of Bute and Arran, the rock of Ailsa, Ireland, the mountain of Plynlimmon in Wales, the Skiddaw in Cumberland, and the hills far beyond it.

Lomond, Loch, beautiful lake in Dumbartonshire.

Lon, or *Lune*, beautiful and romantic river which rises in Westmoreland, and flowing by Kirby Lonsdale in that cty. falls into the Irish Sea, below Lancaster. Its banks are beautiful.

London, metropolis of Great Britain, one of the largest and most opulent cities in the world, mentioned by Tacitus, as a considerable commercial place in the reign of the Roman emperor Nero. In its most extensive view, as the metropolis, it consists of the City, properly so called, the city of Westminster, which was once a mile from London, and the borough of Southwark; beside the suburbs in Middlesex and Surry, within what are called the bills of mortality. London and Westminster are situated in Middlesex, on the N. side of the river Thames. Southwark is situated on the opposite bank, in Surry. The extent of the whole, from Limehouse and Deptford to Milbank and Vauxhall, is above 7 ms.; but the greatest breadth does not exceed 3. Among the public buildings, St. Paul's cathedral is the most conspicuous. It is 2292 feet in circumference, and 365 in height to the top of the cross. It is inferior to none in Europe, except St. Peter's at Rome. It is now destined to be the receptacle of the monuments of such illustrious men, as may do honour to their country by their talents and their virtues; several are already erected, the first, for that great philanthropist, Mr. John Howard. Westminster Abbey is a grand specimen of Gothic architecture, said to have been founded by Sebert, king of the E. Saxons, in 610. Here most of the English sovereigns have been crowned, and many of them interred. It contains also a great number of monuments of kings, statesmen, heroes, poets, and persons distinguished by genius, learning, and science. The chapel of Henry VII. adjoining, Leland calls *The Wonder of the World*. St. Stephen's, Walbrook, is a small church of exquisite beauty, the master-

piece of Sir Christopher Wren. Bow Church, in Cheapside, St. Bride's, in Fleet Street, and St. Dunstan's in the E., and St. Martin's in the Fields, are, with several others, distinguished for fine architecture. The parish churches, in the bills of mortality, amounted to 146; namely, 97 within the walls, 16 without the walls, 23 outparishes in Middlesex and Surry, and 10 in the city and liberties of Westminster. Besides these churches, is one belonging to the Temple, a celebrated seat of law. It was founded by the Knights Templars, in the reign of Henry II. upon the model of that of the Holy Sepulchre, at Jerusalem. There are likewise a great number of chapels for the established church, foreign protestant churches, Roman catholic chapels, meetings for dissenters of all persuasions, and three synagogues for the Jews. The royal palace of St. James is an ancient building, and on the N. side of a small park; it is mean in external appearance, but the apartments are said to be the best calculated for regal parade of any in Europe. The royal town residence is a house on the W. side of James' park, built by the duke of Buckingham, and purchased by the king in 1761, when it received the appellation of the Queen's Palace, but is still frequently called Buckingham House. Carlton House, the residence of the prince of Wales, to the E. of St. James' palace, is a stately building, on which vast sums have been expended. The banqueting house at Whitehall, begun in 1619, is only a small part of the vast plan of a palace, intended to be worthy of the residence of the British monarchs, but left incomplete. Beside the royal palaces, there are many fine houses of the princes of the blood, and of the nobility and gentry. The tower of London is very ancient, but the founder is uncertain. It is surrounded by a wall, and partly by a deep ditch, which enclose several streets, besides the Tower, properly so called: it contains the great artillery, a magazine of small arms for 60,000 men, and the large horse armoury, among which are 15 figures of kings on horseback. Here are the jewels and ornaments of the crown, as well as the regalia; the mint for coining of money, and the menagerie for foreign birds and beasts. It is under the command of a constable and lieutenant. The bridges are a great ornament to the metropolis. The most ancient, London bridge, was begun in 1176, and finished in 1209. The length of it is 915 feet. The number of arches was 19, of unequal dimensions, and deformed by houses on each side, which overhung in a terrific manner. These were removed in 1756, when the upper part of the bridge assumed a modern appearance; but the sterlings remain, though they so contract the space between the piers, as to occasion, at the ebb of tide, a fall of 5 feet, or a number of temporary cataraacts which have occasioned the loss of many lives. Westminster bridge, one of the finest in the world, was built by Labeyle, a native of Switzerland. The first stone was laid in 1759, the last in 1747; but on account of the sinking of one of the piers, the opening of the bridge was retarded till 1750. The whole is of Portland stone, except the spandrels of the arches, which are of Perbeck. It is 1223 feet in

length. It has 13 large, and 2 small semicircular arches: the centre arch is 76 feet wide; the other arches on each side, decreasing in width 4 feet. Blackfriar's bridge, built by Mylne, was completed in 1768. Its length is 995 feet; the breadth of the carriage-way 28, and of the foot paths 7 feet each. It consists of 9 elliptical arches, the centre one of which is 100 feet wide; and both this, and the arch on each side, are wider than the celebrated Rialto at Venice. This noble structure is built of Portland stone. Among the other public buildings, which can merely be enumerated here, are Westminster Hall, containing the supreme court of justice; and adjoining to which are the houses of lords and commons; the Guild-hall of the city; the Sessions House; the Horse Guards, the Treasury and the Admiralty at Whitehall; the noble collection of public offices which form that magnificent structure called Somerset Place; the British Museum; the Royal Exchange; the Bank of England; the Excise Office; the East India House; the South Sea House; the Mansion House, for the lord mayor; and the Monument, in commemoration of the great fire in 1666. The inns of court for the study of the law; the colleges, learned societies, and public seminaries; the halls of the different trading companies; the noble hospitals and other charitable institutions; the public places of diversion; with the fine squares and streets, are all too numerous to be here particularly mentioned. The Adelphi Terrace is the admiration of foreigners, for the noble view which it affords of the river, the bridges, and other public buildings, and of the fine hills beyond Lambeth and Southwark. Such, on a cursory view of it is the metropolis of Great Britain, to the extent and opulence of which many causes have contributed. The broad stream of the Thames flowing between London and Southwark, continually agitated by a brisk current, or a rapid tide, brings constant supplies of fresh air, which no buildings can intercept. The country around, especially on the London side, is nearly open to some distance; whence by the action of the sun and wind on a gravelly soil, it is kept tolerably dry at all seasons, and affords no lodgement for stagnant air or water. The cleanliness of London, as well as its supply of water, is greatly aided by its situation on the banks of the Thames: and the New River, with many good springs within the city itself, further contributes to the abundance of that necessary element. All these are advantages with respect to health, in which this metropolis is exceeded by few. Its situation, with regard to the circumstances of navigation, is equally well chosen; had it been placed lower on the Thames, it would have been annoyed by the marshes; had it been higher, it would not have been accessible, as at present, to ships of large burden. It now possesses every advantage that can be derived from a seaport, and, at the same time, by means of its noble river, enjoys a very extensive communication with the internal parts of the country, which supply it with necessities, and in return receive from it such commodities as they require. It contains several large wet docks, particularly those called

the W. India and E. India, Wapping, and Commercial docks, dry docks for repairing, and slips for building of ships; besides the king's yards at Deptford, for building men of war. London therefore unites in itself all the benefits arising from navigation and commerce, with those of a metropolis at which all the public business of a great nation is transacted; and is thus both the mercantile and political head of the kingdom. It is also the seat of many considerable manufactures; some almost peculiar to itself, as administering to the demands of studied splendour, and refined luxury; others in which it participates with the manufacturing towns in general, with this difference, that only the finer and more costly of their works are performed here. The most important of its peculiar manufactures is the silk weaving established in Spitalfields by refugees from France. A variety of works in gold, silver, and jewellery, the engraving of prints, and making of optical and mathematical instruments, are likewise principally executed here, and some of them in greater perfection than in any other country. The porter-brewery, a business of very great extent, is also chiefly carried on in London. To its port (lately much improved in various respects) are likewise confined some branches of foreign commerce, as the vast E. India trade, and those to Turkey and Hudson's bay. Thus London has risen to its present rank of the first city in Europe with respect to opulence and the number of inhabitants. By the enumeration in 1811, the residents in London, Westminster, and Southwark, and all the out parishes, were 1,009,546. London is a bishop's see, and sends four members to parliament. The city is divided into 26 wards, each governed by an alderman; and from the aldermen the lord mayor is annually chosen. There are likewise 236 common-councilmen, a recorder, a common-sergeant, two sheriffs (who are also sheriffs of Middlesex) a chamberlain, a town-clerk, a city remembrancer, a water-bailiff, and many inferior officers. Westminster is governed by a high steward, who is generally a nobleman, chosen by the dean and chapter, and he has an under steward who officiates for him. Next to him is the high bailiff, chosen also by the dean and chapter, whose power resembles that of a sheriff. The suburbs are under the jurisdiction of magistrates; and those of Middlesex, beside the county-hall on Clarendon Green, have an office in Bow Street, long distinguished for public spirit and activity, and 7 other public offices. Southwark was long independent of London, but Edward III. granted it to the city. It was then called the village of Southwark; and afterwards named the bailiwick. In the reign of Edward VI. it was formed into a 26th ward, by the name of Bridge Ward Without. On the death of the alderman of this ward, he is succeeded by the next in seniority, to whatever ward he may belong; this ward being considered as a sinecure, and consequently the most proper for "the father of the city." The city has likewise a high bailiff and steward here. To enumerate all the events by which this great capital has been distinguished, would greatly exceed our limits, we shall only mention the great plague in 1665, which

cut off 68,596 people, and the dreadful conflagration, in 1666, by which the cathedral and many other churches, with 13,200 houses were destroyed. London is 210 ms. NNW. of Paris, and 300 ESE. of Dublin. Lon. $0^{\circ} 5' W.$ lat. $51^{\circ} 31' N.$

Loudun, town of France in the department of Vienne, 30 ms. NW. of Poitiers, and 155 SW. of Paris.

Loughborough, town of Eng. in Leicestershire. The chief manufactures are wool-combing and hosiery; and it has a trade in coal, &c. by means of a canal from the Trent. It is seated near the Soar, 18 ms. N. of Leicester, and 109 NNW. of London.

Loughborough Township, in the cty. of Frontenac, U. C., lies in the rear and to the N. of Kingston.

Louisa, town of Finland, with a fortress, on a bay of the Gulf of Finland. The houses are all of wood, two stories high, and painted red.

Louisa, cty. of Virg., bounded by Hanover SE., Goochland and Fluvanna SW., Albemarle NW., and Orange and Spotsylvania N. Length 28 ms., mean width 20; area 560 sqms. Surface

moderately hilly. Soil generally fertile. Chief staples, flour and tobacco. Pop. 1820, 13,746. Ctl. lat. 38° N. lon. W. C. 1° W.

Louisa, pstv. Lawrence cty. Kent., by pstrd. 182 ms. E. from Frankfort.

Louisa, C. H. and psto. Louisa cty. Virg., 63 ms. NW. from Richmond. Lat. 38° N. lon. W. C. 1° 1' W.

Louisburgh, capital of the island of Cape Breton. It was taken by the English in 1758, and ceded to them in 1763; since which the fortifications have been destroyed. It has an excellent harbour, near four leagues in circumference. Lon. 59° 48' W. lat. 45° 54' N.

Louisburg, pst. and seat of justice, Franklin cty. N. C., on the E. bank of Tar river, 23 ms. NE. of Raleigh, the capital of the state.

Louis De Ramsay, seignior, Richelieu cty. L. C., on the SE. side of St. Lawrence, near the head of Lake St. Peters, 6 ms. E. from the mouth of Richelieu river. Lat. 36° 4', lon. W. C. 1° 18' W.

Louis, Fort, strongly fortified island in the Rhine, 12 ms. E. from Haguenau.

Louisizide, group of islands in Australasia, or Oceanica, lying SE. from New Guinea, in S. lat. 10°, lon. E. 150°. This Archipelago is very imperfectly known. They have been rather seen than explored. The natives are black, and head covered with wool. The Malay language is here unknown.

Louisiana, pstv. and seat of justice, Pike cty. Miss., 96 ms. N. from St. Louis. It is situated on the Mississippi, at the mouth of Salt river. Lat. 39° 28' N. lon. W. C. 13° 38' W.

Louisiana, state of the United States, bounded by the Gulf of Mexico S. and SE., Miss. NE., Arkansas territory N. or rather NW., and by Texas W.

Area about 48,220 sqms., = 30,860,800 acres.

The longest line which can be drawn in Louisiana, is from the mouth of Mississippi to the NW. angle of the state, 380 ms. Its width is very difficult to estimate; 120 ms. is however, not far from an accurate mean.

Extreme S., at N. lat. 28° 56'.

Extreme N. at N. lat. 33°.

The state of Louisiana contains perhaps as great diversity and extremes of soil as any country of the globe of equal extent. It is no misrepresentation to say, that in this state, every kind of land exists, from the most sterile to the most productive.

The very singular features of Louisiana, and

its importance in our topography, will warrant a more widely extended range of descriptive remark, than I have judged necessary with other sections, more uniform in their interior, and more analogous in their exterior features to the contiguous countries.

The soil of Louisiana admits of five very distinct varieties; river alluvion, pine forest, prairie, river inundated land, and sea marshes. Of these the most extensive is pine forest, but the most valuable, alluvion. In Louisiana, the sea sand alluvion is so limited in extent, as not to merit a distinctive classification.

Commencing from the S., the first natural division which presents itself is the sea marsh. This tract is commensurate with the entire extent of the state, reaching from Pearl to Sabine rivers. It is almost destitute of timber. Its width inland varies from 20 to 30 ms., extending highest into the interior between the streams. All the rivers which communicate with the Mississippi, in a lesser or greater degree, protruding a narrow slip of arable land along their shores, far beyond the interior limit of the sea marsh. None, however, extending this elevated border to the Gulf of Mexico.

The Atchafalaya has but very little arable land on its shores. Its left bank is above ordinary inundation 4 or 5 ms. from its efflux, the right bank liable to annual submersion from the Mississippi. After flowing 5 ms., with the exception of a few spots of very limited extent, the shores of this river are rendered uninhabitable as far down as the mouth of the Teche. The arable shores of the latter river are continued about 5 ms. down the former below their junction; the sea marsh then commences, and all farther habitable land ceases. Three or four ms. below the mouth of Teche, on the opposite bank, the Atchafalaya receives Bayou Bœuf. This bayou is the drain of the space between the Fourche and Atchafalaya rivers, and has a narrow border of high land along its banks, over which the overflow of the Mississippi very seldom reaches; consequently all the water which is brought down by the Atchafalaya, is here confined to its own volume. This circumstance, though fact, is contrary to common opinion in the country itself. All the space between the Lower Teche and Lafourche is usually considered subject to annual inundation. It is so in fact, with the exception of the range we have noticed. A chain of lakes lies between the Atchafalaya and Lafourche, through which, by a terry, is formed the route of communication between the settlements on the Mississippi and Lafourche, and those in Lower Atacapas. The sunken flooded character of the shores of these lakes lead to the error we have corrected. In reality, Bayou Bœuf and its confluent separate in that quarter the inundated tract from the sea marsh.

In the angle between the bay of Atchafalaya and Lafourche river, a number of minor streams head near Bayou Bœuf, and flow S. into the Gulf of Mexico. These small creeks have all arable banks towards their sources, which gradually depress into the sea marsh.

The Lafourche has arable banks about 90 ms. from its efflux from Mississippi, below which

distance the sea marsh encroaches, and prevents settlement.

Between the high banks of Lafourche, and those of Mississippi river, with exception of a few small spots, the intermediate space is occupied by the sea marsh.

The Mississippi proper differs in ordinary phenomena, in no essential respect, except magnitude, from the Lafourche. The banks, of both are the highest ground near their beds. The former carries its arable border with varied width, to the lower end of Plaquemine bend, 3 ms. below Fort St. Philip, where the naked unwooded sea marsh reaches the river bank.

North-east of the Mississippi, the sea marsh borders the river to Plaquemine bend, where the arable selva commences, which with a breadth of not more than 700 or 800 yards, intervenes between the river and marsh, to Terre aux Bœufs, 15 ms. below New Orleans. Terre aux Bœufs extends an arable border for about 15 ms., where the sea marsh reaches both its banks, and terminates settlement.

Above Terre aux Bœufs, the arable border is wider than below that stream, but is confined to the Mississippi banks, as far up that stream as the higher parish of St. John Baptiste, opposite lake Maurepas. In the distance from Terre aux Bœufs to St. John Baptiste, the marsh is only interrupted in one place. Ten ms. above New Orleans, an ancient outlet of the Mississippi pursues a NE. direction, and singular as it may seem, actually crosses Bayou St. John, in the suburb of that name, and continues its original direction by the name of Bayou Gentilly, and falls into the pass of Chef Menteur. Its entire length, about 20 ms. On a small scale, this outlet in its natural state, had an elevated arable wooded border in all its course. With this very partial exemption, the marsh reaches within a mean of half a mile from the Mississippi bank. The whole S. and SW. borders of lakes Ponchartrain and Maurepas form one undivided marsh. This marsh, towards New river, imperceptibly changes to river inundated land.

The general interior boundary of the sea marsh, from what we have seen, proceeding from W. to E., extends from the head of the Sabine, Calcasieu, and Mermentau lakes; from the latter to the western bend of Vermilion; the right shore of the latter river extending a narrow arable border about 20 ms. lower down. A range of low hills or high ranges along the left side of the Vermilion, but sinks into the sea marsh 10 ms. above the southern extension of the cultivated opposing margin.

Leaving the Vermilion river, the marsh winds round the inflections of the bays of Vermilion, Côte Blanche, and Atchafalaya, leaving those bays to the SW., and the Teche river to the SE., advancing in many places to within one or two ms. of the latter. At the junction of Teche and Atchafalaya rivers, we have shown the sea marsh to be bounded inland by Bayou Bœuf, and its constituent branches, between the Atchafalaya and Lafourche rivers. Between the latter and Mississippi, more than nine-tenths of the entire space is marsh. The same observation is applicable to all that part of the island of Orleans, below the parish of St. John Baptiste.

It would be an interesting operation to determine the extent of the irreclaimable sea marsh. The solution of this problem is impracticable, however, to any great exactitude, without extraordinary and unnecessary expense of time and labour. The following estimate will serve for every requisite purpose.

Between the Sabine and Lafourche rivers, is a distance of 180 ms. In this space, the sea marsh and bays will average at least 30 ms. in width, producing an area of 5400 sqms., 3,456,000 acres, or near one-ninth part of the superficies of the state.

North-east of the Lafourche, the sea marsh extends over at least 3000 sqms., or 1,920,000 acres, which added to 3,456,000, yields 5,376,000 acres, or nearly one-sixth part of all Louisiana.

The distinction between sea marsh and the contiguous soils, arises solely from relative height. There is no part of the maritime shores of the United States, which rise so gradually from the surface of the sea as do those of Louisiana. This acclivity is in fact, so gentle, that the common surface of the country at Opelousas court-house, 70 ms. inland, is not more than 20 feet above the level of the Gulf of Mexico. The very near advance of such a country to the curve of a real sphere, will be conceived, when it is considered, that 70 ms. contain 369,600 feet, or that in round numbers, 400,000 feet has only gained an elevation of 20 feet; that is 1 of elevation for 20,000 in distance. It is the natural consequence of so gradual an ascent, to render the gradations of soil almost imperceptible. Therefore, the positive line which separates the sea marsh from the prairies, or river inundation, cannot be drawn.

The tides in the Gulf of Mexico, do not exceed 3 feet, and yet they are perceptible in all the water courses of Louisiana, Mississippi excepted, as high as N. lat. 30° 20'. From this arises the singular phenomenon, that the tides in Plaquemine and Iberville, approach to within 10 ms. of contact, though upwards of 200 ms. above the head of tide water in Mississippi.

The prairie soil partakes of the quality of the adjacent lands. On the waters of Sabine, Calcasin, and Mermentau, the prairies have generally a thin sterile soil, whilst on the Vermilion, Teche, and Courtableau, the prairies are almost uniformly fertile. Wherever the waters of Red or Mississippi have flowed, the soil is productive; and that both these streams have contributed to form the deposit which lines the Teche, Vermilion, and Courtableau, is evident from the texture and alternation of the strata. The evidences of the prevalence of these waters in places far remote from their present influence, are seen in digging wells, where the pale blue sediment of the Mississippi is found in contact with the red ochreous earth, brought down by Red river.

We have already alluded to the probability, that, at a former period, the Mississippi and Red rivers did not unite. The soundness of this hypothesis, is rendered obvious by the general physiognomy of the country at present. But to an eye which has viewed with careful attention, the region between lower Red river, the prairies of Opelousas, and the Atchafalaya river, it must be demonstrable, that the former river

once entered the latter through the channel of the present Courtableau, and that a long narrow peninsula extended from the highlands N. of Red river towards the ancient junction. I have traversed this tract in all its extent, and formed the theory we are now reviewing from actual survey. The range of hills which now terminates at Red river, no doubt was once united to the opposing high ground of Avoyelles. The intermediate space is not at this time more than 2 ms. wide.

The elevation of the platform of Avoyelles is about 20 or 25 feet above the circumjacent low lands; its length 15 or 16 ms. There exists a small wooded hill, of similar height and structure, about 5 ms. S. of lake Pearl. The hill and prairie of Bayou Rouge is the last remaining fragment of the ridge which anciently I suppose contributed to turn Red river south eastwardly. What is at present lake Pearl, and the Bayou le Mourir, and De Glaize, were once an outlet of Red river, according to the induction we have assumed. At high water the overflow of Red river yet passes by that channel. I have myself passed from Red river to Opelousas, through an outlet 15 ms. below Alexandria into Bayou le Mourir, and thence up that stream into Bayou Beuf, and down that stream to its junction with the Crocodile, or to the head of Courtableau river.

When Red river flowed in its ancient channel, the channel E. of the Avoyelles was then occupied by the Ouachitta and Ocatahoola rivers; consequently, the junction of Red and Ouachitta did not then exist. The latter, it is probable, united with the Mississippi as at present, and the higher parts of Atchafalaya was a counter channel between Red and Mississippi rivers.

Whatever may have been, however, the natural revolutions of those streams, the surplus water of Mississippi must, from the superior elevation of that river at time of high water, have found its way to the Gulf of Mexico, as at present.

The river Teche is also one of the ancient outlets of Red river. The Teche is a small, but a singular and very interesting stream. Its sources are in the Opelousas prairies, near the extreme N. extension. Draining the prairies, the Upper Teche, by the name of Bayou Grand Louis, reaches within 3 ms. of the court-house of that parish, where it forms the port of the higher part of Opelousas. Three-fourths of a mile below the port, or as it is there designated, Carron's Landing, the channel divides into two branches, one passing N. into Courtableau river by the name of Bayou Carron, and the other continuing SE. forms the river Teche. When the Mississippi is low, most of the water of Bayou Grand Louis flows into Courtableau, and by that stream into the Atchafalaya; on the contrary, when the Mississippi is even at moderate flood, part of the stream of Courtableau flows through the Carron, and is turned into the Teche. So that the water of Bayou Grand Louis, and in part that of Beuf and Crocodile, contribute to form the rivers Courtableau and Teche, alternately following the stage of the Mississippi tide of flood.

Below its efflux from Bayou Carron, the

Teche flows 20 ms., following its windings, receives Bayou Fusillier from Opelousas, and enters Attacapas. Below this point, the Teche receives no more Tributary water; like the Mississippi, its banks are the highest adjacent ground; its course in Attacapas is about 115 ms., and though not augmented by any confluent stream, its volume increases in width from 20 to 200 yards. The tide rises at all times to New Iberia, N. lat. $30^{\circ} 2'$, and at dry seasons it is perceptible at the mouth of Bayou Fusillier. The comparative length of Teche in Attacapas is only 75 ms. Its banks are the most perfectly uniform of any water-course I ever examined. I have been along its entire channel from Bayou Carron to the mouth, and could never perceive a single instance of an abrupt bend, though so very remarkable for extensive curves, even comparatively more so than the Mississippi. It may be also noticed, amongst the peculiarities of the Teche river, that all its widely sweeping bends are turned towards the Mississippi, or rather Atchafalaya.

But the circumstance which is most worthy of attention in the natural history of the Teche, is the structure of its bed. Commencing with the junction of Bayou Carron and Courtableau river, and following the latter to the head of Teche, and down the latter to its mouth, the immensity of the channel, when compared with the volume of water which enters and flows through it is every where striking. From the apex of the banks to the surface of the highest water, is at all places very considerable, and the distance between the opposing high banks four or five times greater than the most expansive breadth of the water. It is, nevertheless, obvious on inspection, that, at some former period, the whole channel was filled to overflowing. If the waters of Red river were again turned into their ancient course, the Teche would also again resume its former magnitude. It is strikingly obvious from actual examination, that the entire waters of Courtableau, could be turned with a very trifling expense down the Teche. And it could be also shown, that nature has afforded equal facility, to permit art to turn the latter into Vermilion.

I have been thus particular, in describing the rivers of this section of Louisiana, in order to enable the reader to comprehend more clearly the causes of the varieties of soil, and facility of navigation, so strikingly existing between the prairies and alluvial river lands, on the streams which have yet, or which once had, communication with the Red, Mississippi, and Atchafalaya rivers, and those water-courses, which have not ever had connection with those controlling waters.

We now proceed to examine the prairies of Louisiana in detail; but, before enumerating the prairies, we ought to review the rivers which drain or pass over their surface.

The Teche we have already examined. The next river W. of the Teche, is the Vermilion. We have mentioned Bayou Fusillier as a branch of the Teche; it is, however, an outlet of the Vermilion, or perhaps more correctly an interlocking channel between the two rivers. The Vermilion rises at Opelousas court-house, and by the name of Bayou Bourée, flows S. 10 ms.,

divides into two branches; that to the right, continuing S., forms Vermilion; that to the left, turns E. into Teche, and is the stream we have noticed as Bayou Fusillier. The Vermilion has a comparative course of 70 ms., receiving several small, but no considerable branches, and falls into the Bay of Vermilion. The woods are scanty on this stream in all its course; both its source and discharge are totally void of timber. Its banks are generally fertile, and, unlike those of Teche, are high, bold, broken, and diversified, above the termination of the timber and commencement of sea marsh.

The Mermentau is a much more considerable stream than either the Teche or Vermilion, and may not unaptly be viewed as the river of the prairies. It is formed by a number of branches, the principal of which are the Queue Tortue, Lacassine, Plaquemine, Brulé, Bayou Cane, and the Nezpique. The entire length of the Mermentau is about 100 ms.; but the wide space over which its branches extend, give it a volume of more magnitude than its length would indicate. The tide rises in Mermentau, in a low state of its waters, above the junction of its principal branches. Below the mouth of Queue Tortue, the Mermentau expands into a long, narrow lake; timber ceases, the sea marsh commences. The river again contracts into a confined channel, and again opens into a lake of 20 ms. long and 10 ms. wide, connected with the gulf by two channels. On the higher branches of Mermentau, the first secondary rock in Opelousas is found; it is a sandstone, loosely compacted.

I have already remarked that the soil of the prairies, beyond the influence of the interlocking waters of Mississippi, becomes of very inferior quality. The correctness of this observation is seen on every branch of the Mermentau. A list of the prevalent timber on the Teche and Vermilion, contrasted with that on the Mermentau, will amply develop the respective quality of the soil.

On the two former streams are found in abundance, hackberry, sycamore, willow, laurel, magnolia, the black oak, upland white oak, honey locust, mulberry, black walnut, hickory several species, *liriodendron tulipifera*, sweet gum, cotton wood, dogwood, wild cherry, linden, ash, red flowering maple, sassafras two species, laurier almond, elm two species, &c. On the latter soil, sweet gum, linden, black walnut, honey locust, and black oak, *quercus tinctoria*, becomes rare, the *liriodendron tulipifera* entirely ceases. The prevalent timber trees are water oak, Spanish oak, black jack, upland shellbark hickory, and pine. On the former space, the underwood is spice, Spanish mulberry, papaw, (*morua scabra*) red elder, large reed cane, and large muscadine grape vine; on the latter, whortleberry two species (*vaccinium stamineum*, and *vaccinium arborescens*), &c. The trees and shrubs common to both, are dogwood, persimon, holly (*ilex opaca*), iron wood, horn beam, chinquin, laurier almond, and blackberry briar. Some reed cane is found on the waters of Mermentau, but of humble growth, and of very limited extent.

The live oak is common to both sections, but

on the Teche this tree is found as high as Bayou Fusillier, whilst on the Vermilion, and Mermen-tau, it ceases 10 or 12 ms. further S.

The prairies of Lou., have been overrated in extent, even including the sea marsh which we have noticed. Their irregular form renders an accurate estimate of their extent difficult. On a former occasion I carefully calculated the proper prairie land in the state to amount to 3000 sqms., equal to 1,920,000 acres. I am confident that 2,000,000 of acres is a more than sufficient estimate of all the prairie ground in the state; which, if added to the extent allowed for sea marsh, 5,376,000 acres, yields 7,376,000 as the naturally unwooded surface in the state of Lou. This is, indeed, a fearful expanse, amounting to almost one-fourth part of the whole area; and of this superficies, not more than one million and a half of acres can be reduced to culture without enormous expense.

We now proceed to examine river inundated alluvion, another species of soil, which, though often confounded with sea marsh, under the term swamp, differs in most respects from either marsh or swamp.

The alluvial banks of the Lou. rivers are all, in their natural state, more or less subject to inundation; therefore, as used in this place, some explanation is necessary, to show the distinction between grounds casually submerged, and those which are so annually; and between those which admit being reclaimed, and those which are irremediably liable to be laid under water.

The distinction between the reclaimable and irreclaimable alluvion, does not consist merely in more or less exemption or exposure to water; the respective soils are different in texture and composition. The reclaimable alluvion is an inclined plane, sloping in all cases from the rivers by a very gentle descent; the irreclaimable alluvion is generally a dead level, extending indefinitely into the spaces between the streams. The arable river border is usually composed of a fine, loose, rich soil; the interior plains are composed of a very hard, stiff, and less fertile soil than the river borders; what is vulgarly, and very erroneously designated Mississippi swamp, becomes in most places, when laid dry, almost as solid as a stone. Except the sea marsh I have surveyed, very little swamp, in the true intent of the term, exists in Lou.

The natural vegetables found on the two varieties of alluvion, are strikingly different. The trees ordinarily found most prevalent on the reclaimable river borders are: laurel magnolia, black oak, white oak, red elm, mucilaginous elm, sycamore, honey locust, sweet gum, ash, blackberry, poplar, black walnut, white oak two varieties, white bitter nut hickory two species, cotton wood tree, linden, red maple, box elder, iron wood, horn beam, red bud, wild cherry, saffra, laurier almond. The common undergrowth is the large reed cane, spice wood, many different kinds of grape vine and wax, and a species of cornus called swamp wood, yet never found in swampy places very seldom on overflowed land.

Other very common, and yet very errone-

ous opinion, is current respecting the large reed cane of the Mississippi basin. This noble vegetable is supposed to flourish on the annually inundated soil; so far from this being the habitude of that grass, but few vegetables will more certainly or more rapidly perish, if its roots are laid under water; it is, perhaps, of all grasses, the one which would continue to vegetate longest without rain. In all my range of observation, I never once witnessed cane of any size or quantity, worthy notice, on the annually flooded lands. I have also uniformly observed, that when the ground covered by a cane-brake became exposed to submersion, the cane perished from the casualty.

In the rear of the river border, and after the cane has ceased, its place is usually supplied by what is designated in the country, by the English name, palmetto; in French, latania; a species of the *chamærops* of botanists.

The Palmetto is a true dwarf palm, and will resist the effects of water continuing over its roots for some time; but when the depth of the overflow exceeds eighteen inches, or two feet, I have in all cases, observed the disappearance of the palmetto. The soil in which the palmetto predominates is fertile, but of harsher texture than that commonly found covered with cane. Much of the sugar lands of Lou. have been, in their natural state, covered by an under-growth of latania. It is very remarkable, that though in contact, and growing on grounds in many respects analogous, yet cane and palmetto very seldom admit to any considerable extent, and in most cases, their line of contact is as distinct as if drawn by art.

The poke, *phytolacca decandra*, is also a vegetable which obtains the full development of its growth, on the alluvial river border soil of Lou., and is very seldom found on either low inundated ground, or in pine woods.

The two trees of Lou., found on the greatest variety of soil, is the sweet gum and persimon; I have seen those two species of trees, on the lowest and highest parts of the country, admixed with every other kind of timber natural to the respective sections.

The live oak, *quercus virens*, or *quercus sempervirens*, may be considered also as a tree which grows only on border alluvion, and never on annually inundated land. I did not include the live oak in the general list, from the confined extent on which this tree is found.

In the basin of Mobile, the live oak reaches to N. lat. 31° nearly. West of Mobile bay, it is only found on the sea-coast, and a few miles inland. This range is continued nearly to the Mississippi; here the live oak line is inflected to the S., and is not found on the Mississippi banks above N. lat. 30° 10'. It grows on the margin of Atchafalaya, where any spot of high alluvion suits its habitudes. On Teche, it reaches to N. lat. 30° 23'. This is the highest point of latitude, attained by that tree W. of the Mississippi. On the Mermentau, under the shelter of the Plaquemine woods, it reaches N. lat. 30° 20'. On Lacassiné, a few trees only are found; beyond the latter bayou westward, on the waters of Sabine and Calcasieu, the live oak does not exist. I could never perceive a single stem of this tree, on any branch of either

Of the two latter rivers, though in a situation to have detected so remarkable an object in the vegetable kingdom. When I made my voyage down the Sabine, and along the Mexican Gulf, I mistook an opening five miles W. of Calcasieu, for that river, and when I reached its real mouth, I mistook it for the Mermentau. At that time I had never been down the latter stream, below its upper lake, and had been informed that the live oak continued long after the disappearance of every other tree; and had also received information that the live oak grew on the small ridges running parallel to the coast; but finding myself in a river without timber of any kind, 30 m. inland, I distrusted the truth of report, until I found my mistake by arriving at the settlements on Calcasieu lake. Subsequently I ascertained the correctness of the statement respecting the live oak of Mermentau.

The causes which have operated to limit this valuable tree, and to so much inflect its line of termination, are to be sought for in the comparatively severe winters of Louisiana.

The trees which prevail upon the inundated grounds, are swamp overcup, white oak, red oak, willow oak, Spanish oak, large, chestnut leaved oak, tupeloo, cypress, swamp hickory, bastard paccan, single seeded honey locust, ash, two species, willow, three species. Three or four non-descript dwarf trees, form the ordinary under-wood, admixed with vines of various genera and species.

Many other trees are naturally produced on both species of soil; I have enumerated the principal, and those which more particularly serve to designate the texture of the land and vegetable association. Before quitting this part of our subject, I may observe, that the timber trees of the river alluvion, are in general, the same genera and species found on the bluff lands, noticed in my survey of the state of Mississippi. It is a subject of real philosophical attention, to behold the same vegetable families associating together, on two places in many respects so different. To this statement, the cotton wood may, from its rarity on the bluff land, be considered almost an exception.

No person can examine the timber trees of Louisiana and Mississippi, without astonishment at their enormous trunks. Dr. Bartram, in his Travels in Florida, speaks in rapture of the majestic stems of the laurel magnolia. Where I have seen that tree, its column is humble, either in respect to elevation or girth, when compared to that of the *quercus tinctoria*, *liriodendron tulipifera*, *cupressus disticha*, *platanus occidentalis*, or *populus angulata*. Indeed every tree on the alluvion, is far above the ordinary development of its species; not one I have mentioned, but the largest individuals I have seen, were on the soil in question. The gigantic mass of the black oak, poplar, sycamore, cypress, and cotton wood trees of Louisiana, are beyond the limits of easy credibility.

To determine the quantity of inundated land in Louisiana, is attended with much difficulty, from the intricate involutions of the other species of soil. An allowance of one half as much sur-

face for inundated, as we have given to sea marsh and prairie, will not produce a result far removed from correctness. The amount estimated for those soils, was 7,376,000 acres, one half of which is 3,688,000; the entire surface of sea marsh, prairie, and river inundated land, will consequently amount to the appalling extent of 11,064,000 acres, or within a trifle of 17,300 sqms., or nearly three times the surface of New Jersey.

It ought not to be understood that all this wide extent is equally useless to the purposes of human life. The irreclaimable sea marsh, is indeed worse than useless, it is pernicious; but the prairie, as pasture grounds, and the wooded inundated land as a resource for timber, permits a greater area of arable ground to be brought into culture. It is however, a fact, that immense spaces of the superficies of Louisiana, must remain uncultivated wastes, until the increase of population, and consequent dearthness of land, will superinduce recurrence to operations of melioration, far beyond either the means or necessity of the present age.

We now proceed to examine the largest natural division of the soil of Louisiana, the pine forests. It ought not to be understood, that under the general term pine forests, is meant places where that tree prevails to the exclusion of all others; what is intended, is places where the greatest mass of the timber is pine.

The pine lands of Louisiana, are divided into four grand sections; the first, and most extensive, between Sabine river, Red river, and the prairies of Opelousas; this section embraces more than one half of the parishes of Opelousas, Rapides, and Natchitoches, and extends to the NW. extremity of the state. The second section, lies between Red and Ouachitta rivers, and sweeps over more than seven-eighths of the whole surface of that part of Louisiana, included between those two streams. A third pine tract, stretches E. of Ouachitta, and near the boundary between Louisiana and Arkansas, reaches within eight or ten miles of the banks of the Mississippi, and extends S. to near the junction of the rivers Boeuf and Ouachitta. The four parishes of Louisiana, E. of the Mississippi, W. of Pearl, and N. of Lakes Pontchartrain, and Maurepas, and Amite river, contain upwards of 3,000,000 of acres, out of which at least 2,500,000 acres, are covered with pine. With every due allowance, therefore, the pine lands of the state, taken together, exceed 16,000,000 acres, which added to 11,064,000 acres, estimated for sea marsh, wet prairie, and pine woods, gives a grand total of 27,064,000, leaving only 3,804,000 for the surface of the arable river alluvion of the state. This limited surface, does not include all the productive farming land; some of the intervals between the alluvial bottoms and pine woods, have good second rate soil. About forty-five miles in length from Bayou Iberville, to N. lat. 31°, and twenty miles wide E. from the Mississippi, and a part of the prairie lands of Opelousas, are very productive: but we will soon perceive that five millions and a half, are an ample allowance for all the soil of this state, capable of advantageous cultivation. This statement will no doubt appear incredible, when compared with the common

received opinion on that subject, but the following mathematically determined facts put the question at rest. The river lines in the state, measuring both banks where necessary, are upon

This estimate embraces every stream of any consequence in the state, and includes many without any alluvial banks worthy of notice in a geographical point of view; and yet, if the width of half a mile is given to the whole aggregate, the result is 2043 sqms., or 1,307,320 acres. If to this is added as much more for woodland, the result will be 2,615,040 acres, and this again doubled for all other grounds capable of productive cultivation, the whole will only amount to 5,230,080 acres.

Of this surface about one-fifth will admit the production of sugar; the residue remaining for all other objects of agriculture suitable to the climate, such as cotton, indigo, tobacco, and the cereal gramina. Of the latter, however, rice and maize are the only species which will flourish on strong alluvial soil, and the former is restricted by a climate not much more severe, than will arrest the advance of sugar-cane. One pre-eminent advantage of rice, arises from the circumstance of its growth on soils too moist for the beneficial cultivation of almost any other vegetable useful to man. Consequently in the S. of China, along the large rivers of the hither and nether India, of an extensive surface in both Americas, rice has become an important aliment, and must continue to occupy a great part of the labour of mankind: this grain has added at least one-twentieth to the habitable earth, and permitted the increase of the human species in that ratio. Its beneficent results are no where more ample, than on the Delta of the Mississippi.

I have been more particular in the survey of the Delta, than would be requisite with a country less peculiar in its features, or whose relative importance in our confederacy was less apparent.

It must be evident, that in all countries, where the only arable land of consequence is river alluvion, settlements must be formed in lines corresponding to the curves of the streams. With the exception of the Mississippi bluff re-

gion, noticed in my review of that state, most of the settlements in the pine, sea sand, and sea marsh districts of the U. S., conform to this natural arrangement; of course, habitation becomes dense along the river margins, diminishes receding from their banks, and in a great number of instances leaves wide uninhabited intervals. These effects, are however, more apparent and influential in Louisiana, than in any other part of the southern or south-western states.

The settlements in Attacapas, Opelousas, Avoyelles, or Red, Ouachitta, Boeuf Black, and Mississippi, are uniformly in lines upon the streams, or stretching along the wooded margin of the prairies. That part of Louisiana formed from the Mississippi bluff lands, is the only spot in the state where human habitation assumes the scattered relative position, to which they conform in the northern, eastern, and some of the western states. It has been shown that Ark., and Miss., are in these respects in a great degree similar to Louisiana.

The mere position of settlement would in itself be a matter beneath statistical review, but in the instance before us, the mechanical arrangement of human location is connected with one of the most interesting subjects of inquiry that can occupy philosophical research; that is, the number of human beings which can be enabled to subsist on any given space. It may be assumed *a priori*, that a dense, or even moderately compact pop. can never exist upon any region where the asperities of nature, or moral causes, prevent the production of the greatest part of their aliment on, or near their place of residence. If the truth of these propositions are acknowledged, the induction follows, that nature has opposed the concentration of as great numbers of people upon a given space of our southern, as upon an equal area of northern territory. Many other natural causes might be adduced, in aid of this assumption, but it would be needless to collect contingent causes, to account for an effect whose production was so demonstratively, and omnipotently established upon the durable, it might almost be said unchanging laws of matter.

It may be enumerated as one of the peculiarities of the soil of the southern, and south-western states, to have but little mean between the best and the worst; the latter exceeding in extent even more than does the former in quality.

The principal staples of Louisiana, are cotton, sugar, and rice. Cotton is general; but sugar and rice confined, particularly the former, to the lower, or southern parts of the state. The quantity of sugar, made in Louisiana is rapidly increasing. In 1810, it was about 10,000,000 lbs.; in 1814, 15,000,000 lbs.; and in 1817, upwards of 20,000,000. In Darby's Louisiana, the relative sugar, rice, and cotton lands are estimated at 250,000 for sugar, 250,000 for rice, and 2,500,000 for cotton.

The civil and political subdivisions of Louisiana are into parishes. Cities do not exist in the state, but are confined in their uses to a few judicial purposes, and are unknown in the ordinary municipal regulations of the country.

In Louisiana, more than in any other section of the U. S., pop. is extended in lines along the water-courses. From the above table it is seen, that the twelve parishes along the Mississippi river, below the efflux of Atchafalaya, includes upwards of 93,000 inhabitants, leaving only a small fraction more than 60,000 for the residue of the state. The line of settlement along Mississippi, below Atchafalaya, is about 200 ms. in length, and at the utmost, even embracing wood land, not averaging, below Bayou Iberville, more than 3 ms. in width. Above Iberville, on the E. side of the river, settlements widen. The two parishes of New Feliciana and E. Baton Rouge, between lat. 31° , and Bayou Iberville, and extend over 1500 sqms. If we allow for land actually employed in the purposes of agriculture, including tillage and woodland, 600 sqms. below Iberville, and 1000 along and contiguous to the Mississippi, above Iberville and below Atchafalaya, the aggregate will rather exceed than fall below reality. And if we then assume double that extent for all the actually employed agricultural land of the state, we have 3200 sqms., inhabited by 153,407 persons, equal to 48 to the sqm; and leaving an uncultivated extent of 45,120 sqms.

By the census of 1820, the pop. of Louisiana were found composed of 73,867 whites, 60,064 slaves, and 10,476 free coloured persons.

 Louisiana was admitted into the Union as an

independant state, at the session of Congress 1811-12, and changed its name from that of Territory of Orleans, to what it now bears. The majority of the white inhabitants are the descendants of the early French colonists; the next most numerous class is Anglo-Americans; and the residue made up of various nations. Contrary to common belief, there are very few Spaniards in that state. During 34 years that it was held by Spain, it was occupied by the officers of that nation, but never became an object of colonization with the Spanish people.

The varieties in the shades of human society, are perhaps, in no civilized country more marked: between New Orleans and Sabine river, every variety can be seen from the hunter state, to that of the highest refinement of the mercantile, and aristocratical. In New Orleans and its vicinity, the merchants and planters, vie with the most luxurious countries in Europe, in their agriculture and manner of living. As the traveller advances westward, this glare gradually vanishes, and in Attacapas, Opelousas, Rapides, Ouachitta, and Natchitoches, the features of society bespeak substantial independence. Still farther westward, and much intermingled with the latter settlements, the true pastoral state is seen in its simplest forms. Many of those shepherds are truly wealthy. Beef cattle forms in fact, one of the principal interior staples of the SW. part of Louisiana.

Louisville, pst. and seat of justice, Jefferson city. Kent., stands on the left bank of Ohio river, below the mouth of Bear grass creek, and at the head of the Rapids. In 1810, it contained only 1357 inhabitants; its population now no doubt exceeds 5000, and is rapidly increasing. It contains a jail, court-house, and other necessary buildings for judicial purposes, with a theatre, three banks, one a branch of that of the U. S.; a market-house; several places of public worship, and three printing offices.

Many flourishing manufacturing establishments have been formed at this place; amongst which, that erected by the Hope Distillery Company, is one of the most extensive of its kind in the U. S., producing 1200 gallons daily. Besides this very enlarged distillery, three or four large tobacco manufactories are in operation. Upwards of 60 workmen are daily employed in the construction of steam-boats. A very productive soap and candle factory, yielding weekly 12,000 lbs. of soap and 6000 lbs. of candles, is in operation. To the foregoing may be added, a sugar refinery, steam flour mill, and two steam saw mills. From Louisville to Shippingport now proceed about 50 steam boats, the tonnage of which exceeds 7,200 tons.

Canals have been long projected along both banks of Ohio, to pass the Rapids, though no ostensive steps have yet been adopted to carry into effect either plan. The distance necessary to cut, does not exceed, on either bank, more than four miles, and the utility of the work when done, incalculable.

It is 30 ms. in length and 20 in breadth: bounded on the E. by the cantons of Unterwalden, Schweiz, and Zug, and on all the other sides, by the canton of Berne. The inhabitants of this canton are reckoned about 100,000, and are Roman catholics. The government was formerly aristocratical, consisting of a senate of 36, and a council of 64, in which some plebeian burghers were admitted every election; but the Helvetic confederacy, as well as the constitution of the several cantons is now dissolved, the French having cruelly and unjustly enslaved this brave and virtuous people.

Lucern, capital of the canton of Lucern, in Switzerland. It is divided into two by a branch of the Reuss, which falls into the lake, on the NW. end of which the town is seated, and commands an extensive prospect. It scarcely contains 3,000 inhabitants, has no manufactures of consequence, and little commerce. The pope has always a nuncio resident here. In the cathedral is an organ of a fine tone, and an extraordinary size; the centre pipe is 40 feet in length, near 3 in breadth, and weighs 1100

pounds. The bridges which skirt the town, round the edge of the lake, are the fashionable walk of the place, and remarkable for their length. They are decorated with coarse paintings, representing the histories of the Old Testament, the battles of the Swiss, and the Dance of Death. Lucern is 30 ms. SW. of Zurich, and 35 E. of Bern. Luconia, or *Manilla*, the chief of the Philippine Islands, in the N. Pacific Ocean, 400 ms. in length and 100 in breadth. It is not so hot as may be expected, because it is well watered by large lakes and rivers, and the periodical rains which inundate all the plains. There are several volcanoes in the mountains, which occasion earthquakes, and a variety of hot baths. The produce of this island is wax, cotton, wild cinnamon, sulphur, cocoanuts, rice, gold, horses, buffaloes and game. Philip II. of Spain, formed a scheme of planting a colony in the Philippine islands, which had been neglected since the discovery of them by Magellan, in 1521. *Manilla*, in this island, was the station chosen

for the capital of the new establishments. Hence an active commercial intercourse began with the Chinese, a considerable number of whom settled in the Philippine Islands, under the Spanish protection. These supplied the colony so amply with all the valuable productions and manufactures of Asia, as enabled it to open a trade with America, by a direct course of navigation, the longest from land to land on our globe. This trade, at first, was carried on with Calao, on the coast of Peru; but it was afterwards removed to Acapulco on the coast of New Spain. From this port annually sail one or two ships, which are permitted to carry out silver to the amount of 500,000 crowns, in return for which they bring back from Manilla, spices, drugs, China and Japan wares, calicoes, chintz, muslins, silks, &c. The inhabitants are a mixture of several nations, besides Spaniards; and they all produce a mixed breed, distinct from any of the rest. The blacks have long hair and good features; and there is one tribe who prick their skins, and draw figures on them, as they do in most other countries where they go naked. See *Manilla*.

Luzerne, tp. Warren cty. N. Y., on Hudson river, 10 ms. W. from Sandy Hill. Pop. 1820, 1430.

Luzerne, cty. Penn.; bounded SE. by Pike and Northampton, S. by Schuylkill, SW. by Columbia, W. by Lycoming, NW. by Bradford, N. by Susquehanna and E. by Wayne; length 45, breadth 40 ms.; area 1784 sqms. Luzerne cty. is in many respects a very interesting region, and merits a very particular notice in an elementary work.

Its soil and surface is perhaps more varied than any other cty. of Penn. The soil of the valleys is in some parts composed of the richest alluvion, but varies from that species to barren rock. The mountains are rugged and barren, and in general seem incapable of culture. The Susquehanna river enters the cty. at its NW. angle, and flows to the SE. by comparative courses, 35 ms. to the mouth of Lackawannock river; here it turns nearly at right angles, and flows SW. 35 ms. by comparative courses, to a little below Nescopeck, where it enters Columbia.

The following specific description was compiled from the manuscript notes of Isaac A. Chapman, Esq.

The country is very mountainous, and the buttes consist principally of ridges running ed a set to each other; and like the other pine island of Penn., extending nearly parallel the disc coast, in nearly a SW. and NE. direction, in

rection. In the intervals between the mountain ridges are the fertile valleys, on which are placed the body of the pop. of the cty. The principal mountains of Luzerne are the following: Wyoming mountains on each side of Susquehanna river, and forming the valley of Wyoming. The local names of those two ridges are Bullock mountain SE., and Shawanney mountain NW. The over-height of Bullock mountain 1000, and that of Shawanney 850 feet above the Susquehanna river. From the summit of one mountain to that of the other opposite Wilkes Barre, by the road $6\frac{1}{2}$, but by an air line $5\frac{1}{2}$ ms. At the foot of each mountain are the small hills, consequently, the broken ground occupies more space than the real bases of the mountain. At Wilkes Barre, the level plain on the W. side extends about $1\frac{1}{2}$ miles from the river, but on the E. side only about half a mile. Upon the latter the town of Wilkes Barre is situated. The Nescopeck mountain, on the N. side of the Nescopeck creek, is a range nearly of similar height with those of Wyoming, and parallel to them. The Nescopeck forms a regular unbroken ridge, nearly destitute of timber on its summit; and reaches from the Susquehanna, nearly to the Lehigh. Hell Kitchen mountain commences at the head of Nescopeck valley, and extends NE. towards the Lehigh. It is a high, rocky, and barren ridge, naked of timber on its summit, where only small shrubby finds support. From the NW. slope of this mountain flows Hell Kitchen creek, a small branch of Nescopeck.

Sugar loaf mountain is an isolated pyramidal peak, rising from Nescopeck valley. Mahoopeny mountain is a mere spur of Bowman's mountains. See *Bowman's mountains* and *Lackawannock mountain*.

The Wyoming, Lackawannock, and Buck mountains all produce mineral coal of the Anthracite species. It forms an important article of commerce from Luzerne cty.

The valleys of Luzerne are the following: Valley of Wyoming, about 20 ms. long and 5 wide, lying on both sides of the Susquehanna river, which enters it at its NE. extremity, through the precipitous gap in the Shawanesc range. The river traverses the valley in a serpentine course, and leaves it by a gap called Nanticoke falls. In this valley stand the towns of Wilkes Barre and Kingston, opposite to each other. This is the most populous valley in the cty., the soil is exuberantly fertile.

Nescopeck valley lies on both sides of Nescopeck creek, and between Nescopeck and Buck mountains. It is about 20 ms. long and 5 wide, and does not extend to the river. In point of soil it stands next to Lackawannock valley, but the soil of Nescopeck is somewhat superior. See *Lackawannock Valley*.

Tunkhannock valley is very irregular and crooked, about a mile wide, lessening in some places to half a mile, and about 35 ms. long, and reaches from the Susquehanna river into Susquehanna cty. In proportion to its width, it is well cultivated and populous.

Mahoopeny valley lies along Mahoopeny creek. It is narrow, irregular, and thinly peopled. Its length about 20 ms. from the river. Its opening to the river is in Brain.

trim tp., in the NW. part of the cty. All the streams of Luzerne are rapid, and supply in an indefinite number of places, excellent sites for water works.

About one-fiftieth part of the whole cty. is already cleared and cultivated, and not more than one-third will admit of agriculture. For pastoral purposes the proportion to the whole will be larger.

The mountain timber of Luzerne, is various species of oak, thinly admixed with yellow pitch, and white pine, of a small growth. On the hills, timber becomes larger and more numerous in species, the oak and pine being mixed with hickory, wild-cherry, beech, birch, and hemlock. In the northern parts of the cty., 4 or 5 ms. from the Susquehannah, sugar-maple is very abundant, and mixed with an immense quantity of beech, and hemlock, the latter peculiarly abounding on the lowlands. In the southern part of the cty., the low grounds or valleys, generally produce yellow pine, white pine, oak, and hickory, and occasionally button-wood. Black walnut is common to the dry rich soil of the whole cty.

The only minerals yet found in any considerable quantity in Luzerne, are iron and coal. Two forges for the manufacture of iron have been erected, one in Lackawannock, the other in Nantikoke valley. Staples of Luzerne, grain, flour, whiskey, lumber, and coal. Chief towns, Wilkes Barre, Kingston, and Stodartsville. Pop. 1820, 20,027.

Luzerne, tp. Fayette cty. Penn., in the great bend of the Monongahela, opposite Ten-mile creek, 12 ms. NW. from Union. Pop. 1820, 1610.

Luzzi, town of Naples, in Calabria Citeriore, near the river Crate, 3 ms. S. of Bisignano.

Lybian Desert. This immense sandy region of Africa, is the eastern extension of the Sahara. Though but imperfectly explored, that part of interior Africa between the mountains of Fezzan and the Niger, is, however, known not to be so absolutely sterile as even the desert of Barea. Rivers do flow southwardly from the Lybian sands, which must be confluent of the Niger. The Lybian desert is nevertheless, only a shade less rude than the great western Sahara; barrenness and barbarism reign from the Nile to the Atlantic.

Lyham, town of Eng., in Norfolk. It is 24 ms. W. by N. of Norwich, and 92 NNE. of London.

Lycoming, cty. Penn., on the W. branch of the Susquehannah; bounded SE. by Columbia, S. by Northumberland, Union, and Centre; W. by Clearfield and McKean, N. by Potter, Tioga, and Bradford, and E. by Luzerne; length 92, width 25 ms.; area 2290 sqms. In many respects, a strong resemblance exists between Lycoming and Luzerne cties., though the former is less mountainous than the latter. Lycoming is traversed from W. to E. by the W. branch of Susquehannah, and drained by numerous large creeks or small rivers, flowing prin-

cipally from the N. and NE., such as the Sinna mahoning, Kettle creek, Pine creek, Loyalsock, and Muncy creeks. Soil, timber, productions, and staples, nearly the same as those noticed under the head of Luzerne. Chief town, Williamsport. Pop. 1820, 13,517.

Lycoming, tp. Lycoming cty. Penn., extending from the W. branch up Lycoming creek, and commencing at Newry, 2 ms. above Williamsport. Pop. 1820, 1210.

Lycoming, small river of Lycoming cty. Penn., rising in the southern border of Bradford, leading with the Towanda, and flowing SW. falls into the W. branch, 2 ms. above Williamsport.

Lynchburg, pst. Campbell cty. Virg., situated on the S. side of James' river, 118 ms. W. of Richmond and 128 W. by N. of Petersburg.

Lon. W. C. 2° 16' W. lat. 37° 18' N. This town has advanced with great rapidity within the last 20 years. It was incorporated in 1805, and it now contains, beside the ordinary city buildings and places of public worship, 7 or 8 tobacco warehouses, in which from 10 to 15,000 hogsheads of tobacco are annually inspected, 3 or 4 flour mills, 1 paper mill, 1 carding machine, 3 or 4 cotton and woollen manufactories, near 50 dry good stores, and upwards of 20 grocery stores, with 4 book stores. It is an emporium for the trade of an extensive, fertile, and well cultivated interior. James' river being navigable for batteaux from here to Richmond, the tobacco, wheat, flour, hemp, whiskey, and beef, are embarked and sent down by water. Pop. about 6000. A marble manufactory has been also established, a circumstance very illustrative of wealth and taste.

Lyons, late province of France, which, with that of Forez forms the department of Rhone and Loire.

Lyons, second city of France for beauty, commerce, and opulence. It is the capital of the department of Rhone and Loire, and is seated at the confluence of the Rhone and Saone. It was founded about the year 42 B. C. by the Romans, who made it the centre of the commerce of the Gauls. About the year 145, it was totally destroyed by fire, but was rebuilt by the munificence of Nero. Many antiquities are still observed, that evince its Roman origin. Lyons is the see of an archbishop, and before its recent calamities, contained 150,000 inhabitants, upwards of 30,000 of whom were employed in various manufactures, particularly of rich stuffs of the most exquisite workmanship, in silk, gold, silver, &c. The quays were adorned with magnificent structures. The Hotel-deville vied with that of Amsterdam; and the theatre was not surpassed by any in France. The other principal public buildings were, the Hotel de Dieu, the Hospital of Charity, the Exchange, the Custom House, the Palace of Justice, the Arsenal, a public library, and two colleges. The bridge, which unites the city with the suburbs de la Guillotiere, is 1560 feet long; and there are three other principal suburbs, six gates, and several fine churches. No city of France suffered so much from the revolution as Lyons; its population was reduced to less than 80,000. It is again rapidly increasing, and contains, it is probable, 130,000 inhabitants. This city is 15 ms. N. of Vienne, and 220 SE. of Paris. Lon. 4° 55' E. lat. 45° 46' N.

Madagascar, large island of Africa, discovered by the Portuguese in 1492. It lies 10 leagues E of the continent of Africa, from which it is separated by the strait of Mosambique. It extends 900 ms from N to S., and is from 200 to 300 broad. The natives are commonly tall, well made, and of olive complexion, and some of them pretty black. They are civil and good natured people but easily provoked, and apt to show their resentment on the least provocation. Their hair is not woolly, like that of the negroes of Guinea, but it is always black, and for the most part curls naturally. Their nose is small, though not flat, and they have not thick lips. The abundance and variety of provisions of every kind, which a fine climate and fertile soil can produce are on no part of the globe superior to those of Madagascar. The French have attempted to settle here, but have always been repelled. There are only some parts on the coast yet known. Lat from 12° to 26° S.

Madra, island in the Atlantic Ocean, 120 ms in circumference, and 240 N by E. of Teneriffe, the centre in lat $32^{\circ} 48'$ N. The scorching heat of summer, and the icy chill of winter, are here equally unknown, spring and autumn reign continually, and produce flowers and fruits throughout the year. Many brooks and small rivulets descend from the mountains in deep chasms or glens, which separate the various parts of the island. The beds of the

brooks are in some places covered with stones of all sizes, carried down from the higher parts by the violence of winter rains or floods of melted snow. The water is conducted by weers and channels in the vineyards, where each proprietor has the use of it for a certain time; some being allowed to keep a constant supply of it, some to use it thrice, others twice, and others only once a week. As the heat of the climate renders the supply of water to the vineyards absolutely necessary, it is not without great expense that a new vineyard can be planted: for the maintenance of which, the owners must purchase water at a higher price, from those who are constantly supplied, and are thus enabled to spare some of it. The cedar tree is found in great abundance, and extremely beautiful; most of the ceilings and furniture at Madeira are made of that wood, which yields a very fragrant smell. The dragon tree is a native of this island. Flowers nursed in the English greenhouses grow wild here in the fields; the hedges are mostly formed of the myrtle, rose, jessamine, and honeysuckle; while the larkspur, fleur-de-lis, lupin, &c. spring up spontaneously in the meadows. There are very few reptiles to be seen in the island; the lizard is the most common. Canary birds and goldfinches are found in the mountains; of the former numbers are sent every year to England. This island is well watered and populous. Funchal is the capital.

Madras, or *Fort St. George*, fort and town of the peninsula of Hindoostan, on the coast of Coromandel. It is the principal settlement of the English E. India Company on the E. side of the peninsula, and is a fortress of very great extent, including within it a regular well built city. It is close on the margin of the Bay of Bengal, from which it has a rich and beautiful appearance; the houses being covered with a stucco called chunam, which in itself is nearly

as compact as the finest marble, and, as it bears as high a polish, is equally splendid. They consist of long colonnades, with open porticos, and flat roofs; and the city contains many handsome and spacious streets. But the inner apartments of the houses are not much decorated, presenting to the eye only white walls; which, however, from the marble-like appearance of the stucco, give a freshness, grateful in so hot a country. Ceilings are very uncommon in the rooms. Indeed it is impossible to find any which will resist the ravages of that destructive insect, the white ant. There is a second city, called the Black Town, nearly 4 ms. in circuit, separated from Madras by the breadth of a proper esplanade only. Madras, in common with all the European settlements on this coast, has no port for shipping; the coast forming nearly a straight line; and it is incommoded also with a high and dangerous surf. Madras was taken by the French in 1746, but restored by the peace of Aix-la-Chapelle. It is 100 ms. N. by E. of Pondicherry, 1030 S.W. by W. of Calcutta, and 758 SE. of Bombay. Lon. $80^{\circ} 25'$ E. lat. $13^{\circ} 5'$ N.

Madrid, capital of Spain, in New Castile. The houses are all built with brick, and the streets are long, broad, and straight, and adorned at proper distances with handsome fountains. There are above 100 towers or steeples, in different places, which contribute greatly to the embellishment of the city. It is seated in a large plain surrounded by high mountains. Madrid is seated on the river Manzanares, which though small, is adorned with 2 magnificent bridges. It is 265 ms. NE. of Lisbon, 790 S. by W. of London and 625 SSW. of Paris. Lon. $3^{\circ} 20'$ W. lat. $40^{\circ} 25'$ N. It is the most elevated capital in Europe, standing on ground 1977 84-100 feet above the level of the Atlantic Ocean; consequently the air in winter is keen and piercing. The atmosphere is, however, generally pure and serene. Pop. about 200,000. The learned institutions of Madrid are numerous and highly respectable. It is 850 ms. W. by S. from Rome, but upwards of 1000 by land.

Mad river, large eastern branch of the Great Miami, rising in the northern parts of Logan city, Ohio; across which, and Clark, and the northwestwardly corner of Green city, it runs

in a southwestwardly direction above 50 ms., into the eastern part of Montgomery city, and falls into the Miami above the town of Dayton.

Madrogum, large town of Africa, capital of Monomotapa, with a spacious royal palace. The upper part of the houses is in the shape of a bell. Lon. $31^{\circ} 40'$ E. lat. 18° S.

Madura, large town and capital of an island of the same name, in the Indian Sea. Lon. $12^{\circ} 49'$ E. lat. $9^{\circ} 50'$ N.

Madura, town of the Carnatic, capital of a province of the same name, on the coast of Coromandel, 130 ms. N. by E. of Cape Comorin, and 303 SW. of Madras. Lon. $78^{\circ} 12'$ E. lat. $9^{\circ} 55'$ N.

Maeler, lake of Sweden 80 ms. long and 20 broad, between the provinces of Westmania and Sudermania.

Maelstrom, very extraordinary and dangerous whirlpool, on the coast of Norway, in 68° N. lat. in the province of Nordland and district of Lofoden, near the island of Moskoe, whence it is also named *Moskoeastrum*. The mountains of *Relseggen*, in Lofoden, lie a league from the island of Moskoe, and between these two, runs this large and dreadful stream, the depth of which is from 36 to 40 fathoms. When it is flood, the stream runs up the country between Lofoden and Moskoe with a boisterous rapidity; but the roar of its impetuous ebb to the sea is scarcely equalled by the loudest cataract. The whirlpool is of such an extent and depth, that if a ship comes within its attraction, it is inevitably absorbed and beat to pieces against the rocks below; and when the water relaxes, the fragments come up again. The intervals of tranquillity are only at the turn of the ebb and flood, and calm weather; they last but a quarter of an hour, its violence gradually returning. When the stream is most boisterous, and its fury heightened by a storm, vessels have been reached by it at the distance of 5 ms.

Maerna, town of Germany, in Tyrol, 23 ms. WSW. of Trent.

Maeseyk, town of the Netherlands, in the territory of Liege, on the river Meuse, 10 ms. SSW. of Ruremonde.

Maeslandshuis, town of South Holland, near the mouth of the Meuse, 10 ms. W. of Rotterdam.

Maestricht, city of the Netherlands, about 4 ms. in circumference, seated on the Meuse, opposite Wyck, with which it communicates by a stone bridge. The number of inhabitants is estimated at 18,000. It has a college, formerly belonging to the Jesuits, a council house with its library, and manufactures of cloth, and fire-arms. The fortification, and situation of Maestricht are such, that it is deemed one of the strongest places in Europe. It is 14 ms. NNE. of Leige, and 58 E. of Brussels. Lon. $5^{\circ} 48'$ E. lat. $50^{\circ} 49'$ N.

Mafra, town of Portugal, in Estremadura, with a college founded in 1772. The town is seated near the sea, 18 ms. NNW. of Lisbon.

Magadi, or *Magheru*, town of Hindoostan, in Mysore, seated in a hilly country, abounding in timber-trees, stone, and iron, 24 ms. W. of Bangalore.

Magadoxo, capital of a kingdom of the same name, on the coast of Ajan, with a citadel, and

good harbour. It stands at the mouth of a river of its name, which is supposed to have a long course, having regular inundations that fertilize the country to a great extent. The king and his court are Mohammedans; his subjects, of what extract soever, (for some of them are white, others tawny and olive, and others quite black,) all speak the Arabic tongue; they are stout and warlike, and among other weapons, use poisoned arrows and lances. The city is a place of great commerce, receiving from Adel and other parts, cotton, silk, spices, and drugs, in exchange for gold, ivory, wax, and other commodities. Lon. $46^{\circ} 25'$ E. lat. $2^{\circ} 10'$ N.

Magdalena, river of South America, formed by two large branches rising in the province of Popayan, and near the city of Popayan. Magdalena Proper, has its source in a small mountain lake, about 70 ms. SE. from Popayan, at N. lat. $1^{\circ} 45'$, and about $45'$ of lon. E. from W. C. The Canca, or western branch, rises at the city of Popayan. The two branches inclining a little to the E. of N., flow nearly parallel down two mountain valleys, to N. lat. $9^{\circ} 30'$, or upwards of 600 ms. Below their junction, the united stream inclining a little W. of N., is finally lost in the Caribbean sea, at N. lat. 11° , after a comparative course of nearly 1000 ms. A branch of the Andes extends from Popayan, between the two branches of this river, which only terminates a few miles above their junction. Neither branch receives any large tributaries, being augmented by mere mountain torrents.

The city of Popayan stands upwards of 5900 feet above the level of the ocean; therefore, the Magdalena, has a fall, from source to the point of discharge, of more than 6000 feet. When compared with length of course, the Magdalena is a very unnavigable stream. Though discharged into the Atlantic, the extreme SW. sources of the Canca branch of Magdalena, rise within 70 ms. of the Pacific ocean, at the bay of Choco.

Magdeburg, dutchy of Germany, in Lower Saxony, bounded on the N. and E. by Brandenburg, S. by Anhalt, and Haberstadt, and W. by Brunswick. It is divided into four circles, Hols, Saal, Jerich, and Ziesar. The country is in general level, and the parts which are not marshy, and overgrown with wood, are very fertile. The salt springs are of such richness, that they are able to supply all Germany with salt. This dutchy belongs to the king of Prussia.

Magdeburg, fortified city, capital of the dutchy of the same name. It has a handsome palace, a citadel with a fine arsenal, and a magnificent cathedral, which contains the superb mausoleum of Ocho the Great. This city is happily situated for trade, having an easy communication with Hamburg by the Elbe, therefore, they carry on manufactures of cotton, linen, &c., to a great extent, but their principal merchandise is silk and woollen. It is the strongest place belonging to the Prussian majesty, where his principal magazines and foundries are established. It is 40 ms. W. of Brandenburg, and 125 SE. of Hamburg. Lon. $11^{\circ} 45'$ E. lat. $52^{\circ} 11'$ N.

Magellan, strait of South America, between

the continent, and island of Terra del Fuego, discovered in 1520, by Magellan, a Portuguese in the service of Spain, since which time, it has been sailed through by several navigators; but the passage being dangerous and troublesome, they now sail to the Pacific Ocean round Cape Horn. The Spaniards call the country to the N. of this strait, Tierra Magallanica.

Magville, tp. Sunbury city. New Brunswick, on the right side of St. John's river.

Maginda, island of the Pacific Ocean, in Austral Asia; it is the most southern of the Philippines, and is about 300 ms. in length, but irregular and narrow.

Magindano, town and capital of the foregoing island, is situated at lon. 124° 40' E., and lat. 7° 9' N.

Maggia. See *Madia*.

Maggiore, or *Locarno*, lake of Italy, partly in the dutchy of Milan, and partly in the country of the Grisons, being about 35 ms. in length, and 6 in breadth.

Magliano small but populous town of Italy, in the territory of the pope, and district of Sabino, seated on a mountain near the river Tiber, 30 ms. SW. of Spoleto, and 30 N. of Rome. Lon. 42° 35' E. lat. 42° 25' N.

Magnavacca, town of Italy, in the Ferrarese, with a fort, seated at the mouth of the lake of Comachio, in the Gulf of Venice, 18 ms. N. of Ravenna. Lon. 12° 4' E. lat. 44° 52' N.

Mugra, river of Italy, which rises in the Apennines, in the valley of Magra, washes Pontremoli, and Sarzana, below which it falls into the Mediterranean.

Mugra, valley in the dutchy of Tuscany, 27 ms. in length, and 15 in breadth.

Magruder's, psto. Prince George's city. Md., 15 ms. from W. C., and 22 from Annapolis.

Maguelone, lake of France, in the department of Herault, near a town of the same name, which is seated on the coast of the Mediterranean, into which the lake enters by a canal, the beginning of the famous capital of Languedoc.

Mahadia. See *Elnadia*.

Mahulen, town of Egypt, capital of Garbia. It carries on a considerable trade in linen, cotton, and saunmoniac; and the inhabitants have ovens to hatch chickens. Lon. 30° 31' E. lat. 31° 30' N.

Mahanoy, river of Penn., rises in the northern part of Schuylkill city, in the tp. of Rush, and flowing WSW., about 50 ms., falls into the Susquehannah, 11 ms. below Sunbury. About one-half its course towards its mouth, is in Northumberland city.

Mahanoy Mountains, are one ridge between Mahanoy and Catawissy rivers; and another between Mahanoy river and Shamokin creeks.

Mahanoy, Little, tp. Northumberland city. Penn., between Line, and Mahanoy mountains. Pop. 1820, 447.

Mahanoy, Lower, tp. Northumberland city. Penn., along the Susquehannah, between Mahanoy and Mahantango rivers. Pop. 1820, 1214.

Mahanoy, Upper, tp. Northumberland city. Penn., enclosed by the Scire mountain, the N. W. limit of Schuylkill city. Mahantango creek, and the tp. of Lower Mahanoy. Pop. 1820, 1639.

Mahanotango Creek, stream of Penn. rises in the NW. angle of Schuylkill city, and flows WSW., and falls into the Susquehannah, 35 ms above Harrisburg. For about 12 ms. above its mouth, it separates Dauphin and Northumberland cities.

Mahanotango, Lower, tp. in the NW. angle of Schuylkill city. Pop. on Long Pine creek, or main branch of Mahantango. Pop. 1820, 937.

Mahanotango, Upper, tp. in the NW. angle of Schuylkill city, on Little Mahantango. Pop. 1820, 863.

Mahanuddy, or *Mahanady*, river of Hindoostan, which takes its rise in the NW. part of Berar. It falls by several mouths into the bay of Bengal, at Cattack; these mouths form an assemblage of low woody islands. At the mouth of the principal channel, near False Point, is a fortified island, named Cajung, or Codjung.

Mahoning, river of Penn., rises by one large branch in the western part of Jefferson, and by another in the western part of Indiana. These branches interlock with the extreme western sources of the Susquehannah, and flowing westward, unite at Nicholasburg in the NW. angle of Indiana, and the united stream continuing a little N. of W. about 20 ms., falls into the Alleghany river, 20 ms. above Kittanning. The entire length of the Mahoning is about 50 ms.

Mahoning, northern tp. of Indiana city. Penn., Pop. 1820, 1106.

Mahoning, NW. tp. of Mercer city. Penn., traversed by the Shenango and Mahoning creeks. Pop. 1820, 1647.

Mahoning, large creek, or small river rising in Columbiana, Stark, Portage, and Trumbull cities, Ohio, enters Penn. at the SE. angle of the latter and joins the Shenango, to form Big Beaver, in Beaver city. Penn.

Mahoning, tp. of Columbia city. Penn., on the right side of Susquehannah river, including the village of Danville. Pop. 1820, 1478.

Mahrattas, two large and powerful states of India, which derive their name from Mahrat, an ancient province of the Deccan. They are called the Poonah, or Western Mahrattas; and the Berar or Eastern. Collectively, they occupy all the S. part of Hindoostan Proper, with a large proportion of the Deccan. Malwa, Orissa, Candesh, and Visiapour, the principal parts of Berar, Guzerat, and Amere; and a small part of Dowlatabad, Agra, and Allahabad, are comprised within their empire, which extends from sea to sea, across the wuest part of the peninsula; and from the confines of Agra northward to the river Kishna southward; forming a tract of 1000 ms. long, and 700 broad. The western state, the capital of which is Poonah, is divided among a number of chiefs or princes, whose obedience to the paiswah, or head, like that of the German princes to the emperor, is merely nominal at any time; and in some instances, an opposition of interests begets wars, not only between the members of the empire

themselves, but also between the members and the head. Nagpou is the capital of the Eastern Mahrattas. Their armies are principally composed of light horse.

Maiden Creek, large branch of Schuylkill river, rising in the NW. angle of Lehigh city, flows nearly S. through Lehigh and Reading, and falls into Schuylkill, 6 ms. above Reading.

Maiden Creek, tp. of Berks, city, Penn., along the Schuylkill, on both sides of Maiden creek. Pop. 1820, 1192.

Maidenhead, corporate town of Eng. in Berkshire. It carries on a pretty considerable trade in malt, meal, and timber. It is on the Thames, over which is a bridge, 12 ms. E. by N. of Reading, and 26 W. by N. of London. Lon. 0° 40' W. lat. 51° 32' N.

Maidenhead, tp. of Hunterdon city, N. J. It is situated on the pstrl., about 6 ms. NE. of Trenton. Pop. 1820, 1354.

Maidstone, borough of Eng., and the city, town of Kent. It is seated on the Medway, a branch of which runs through the town, over which there is a bridge, and enjoys a brisk trade in exporting the commodities of the city, particularly its hops, of which there are numerous plantations around it. Here are likewise paper mills, and a manufacture of linen thread. It is 20 ms. W. of Canterbury, and 35 ESE. of London. Lon. 0° 38' E. lat. 51° 16' N.

Maidstone Township, Essex city, U. C., lies between Sandwich and Rochester, upon lake Erie.

Maidstone, tp. Essex city, Ver., 53 ms. N. from Montpelier. Pop. 200.

Maina, district of the Morea, ancient Peloponnesus, which answers in part to the ancient Laconia. It is mountainous and barren, and inhabited by a poor, bold, and hardy race, who have never entirely submitted to the Turkish yoke. Maina, though sometimes so stated by authors, is not commensurate with ancient Laconia, but is restricted to that mountainous and barren point of land, extending into the Mediterranean, between the Gulfs of Coron and Kolokythia. What may be the numbers of the brigands who inhabit this rude tract is unknown, but their territory does not exceed 30 ms. in length, with 10 ms. in width, or about 300 sqms. Maina is, except the point of Gibraltar, the most southern promontory of Europe. See *Mainotes*.

Maine, river of Germany, which rises in the circle of Franconia, runs by Bamberg, Wurtzburg, Aschaffenburg, Hanau, and Frankfurt, falls into the Rhine, at Mentz.

Maine, Upper and Lower, two circles of Bavaria. The former including the principalities of Upper Bamberg, Bareuth, with the northern part of the Upper Palatinate. Lower Maine contains the grand duchy of Wurtzburg, principality of Fulda, with part of the duchies of Hesse and Fulda. The two circles were in great part annexations made by the congress of Vienna, in 1815, and extend over 6,700 sqms. and peopled by 860,000 inhabitants.

Maining, or *Mayenne*, department of France, which includes the late province of the same name. It takes its name from the river Maine, which, soon after its junction with the Sarthe, falls into the Loire. Laval is the capital.

Maine, northeastern state of the U. S., bound-

ed by the Atlantic Ocean SE., N. H. SW, L. C. NW. and N., and New Brunswick E.

Ms.
Maine has an external limit on the Atlantic Ocean of - - - - - 200
On Passamaquoddy bay and St. Croix river 100
A frontier curved limit on New Brunswick and Lower Canada, - - - - - 400
A limit in common with New Hampshire of 150

Having an entire outline of 850

Its area 35,000 sqms. or 22,400,000 acres.
Extreme south, N. lat. 43° 4'; extreme north, N. lat. 48°.

The greatest length of Maine is by a line drawn from its SW to NE. angle, 350 ms. Greatest width, nearly on lat. 45° N., 200 ms.

Extending through 5° of lat., very serious difference of climate is experienced at the two extremities of Maine. The inhabited Atlantic border has a comparatively mild climate. The surface of the state, though not mountainous, may be viewed as rough and hilly. The soil, however, is generally well adapted to the purposes of agriculture, though varying very much in quality. The Atlantic border is indented and chequered more by peninsulas and islands than any other part of the coast of the U. S. This highly diversified zone is followed by another more elevated; the falls of the rivers marking the line of separation. The inhabited part of the state extends about 100 ns. inland, and is followed by a region abounding with lakes, and but imperfectly known.

Beside many of lesser note, Maine is drained by the three fine rivers, Androscoggin, Kennebec, and Penobscot. The two former, are, however in strictness, only one river. See the articles *Kennebec* and *Penobscot*. The sea border of this state, is in a peculiar manner remarkable for the number and excellence of its harbours; and the excessive rise and ebb of the tides, tends to break the ice, and preserve the harbours of this and all other parts of the coast of the U. S., NE. from Cape Cod more open in winter than could be expected in ordinary cases, from relative lat.

The principal productions of Maine, are grain, such as wheat, rye, oats, maize, and barley, meadow grasses, and flax. The immense interior forests, supply large quantities of lumber. The latter may indeed be viewed as the primary staple of the state. Its principal ports are, Portland, Hallowell, Penobscot, Bangor, and Eastport.

This state has, like other sections of New England, paid early and steady attention to the interests of education. Amongst its principal literary institutions, may be enumerated, Bowdoin college in Brunswick. The Maine Charity School at Bangor, and the Literary and Theological school or institution at Waterville. Maine was admitted a state of the U. S. March 3d, 1820.

Politically Maine is subdivided into the cities of

Maine and Loire, department of France, which includes the late province of Anjou. It has its name from two rivers of the same name. Angers is the capital.

Maineville, town of France in the department of Eure, and late province of Normandy. Lon. $1^{\circ} 26'$ E. lat. $49^{\circ} 2'$ N.

Mainland, the principal of the Shetland Isles, 60 ms. long, from N. to S., but its breadth seldom exceeds six. The face of the country exhibits a prospect of black, craggy mountains, and marshy plains, interspersed with some verdant spots, which appear smooth and fertile. Neither tree or shrub is to be seen, except the juniper and the heath. The inhabitants are a stout, well-made, comely people; the lower sort of a swarthy complexion. The gentry are allowed, by all who have conversed with them, to be most of them polite, shrewd, sensible, lively, active and intelligent persons: they manufacture a strong coarse cloth for their own use, as also linen. They make likewise of their own wool very fine stockings. They export some herrings, and other fish, with a considerable quantity of butter and train oil, otter and seal skins, and no inconsiderable quantity of the fine stockings just mentioned. Their chief trade is to Leith, London, Hamburg, Spain, and to the Straits. Kirkwall is the capital.

Mainotes, a people of Greece in the Morea, inhabiting the district of Maina. As early as the reign of Constantine Porphyrogenitus, during the latter part of the eighth century the Eleuthero-Laconians, had acquired the name of Mainotes. From what nation or nations has sprung this race of savages is uncertain and unimportant, as Cape Ténacrus, now Metapan, the most southern extremity of the Morea, has been from remote antiquity inhabited by savages, who have been pirates, and murderers of all those so unfortunate as to fall into their power. The well known character of these ruffians has gained for them, from the Greeks of the Morea, the title of Cacovougries, "*villains of the mountains*." The existence of a band of cut-throats on the European side of the Mediterranean; even under the Turkish government may well excite wonder. The Mainotes, before the late revolution in Greece, were considered sometimes as independent, and at other times as subjected to the Pacha of Tripolizza. See *Maina*.

Maintenon, town of France, in the department of Eure and Loire and late province of Beauce, seated on the Eure, between two mountains. It is 5 ms. N. by E. of Chartres. Lon. $1^{\circ} 36'$ E. lat. $48^{\circ} 31'$ N.

Maire, Le, strait of S. America, between Staten Island and Tierra del Fuego, in lat. 55° S.

Through this strait ships sometimes sail in their passage to Cape Horn.

Maisy, town of France in the department of Calvados, and late province of Normandy. Lon. $1^{\circ} 2' W.$ lat. $49^{\circ} 24' N.$

Mairant, *St.* ancient town of France, in the department of the two Sevrès and late province of Poitou. It carries on a trade in corn, stockings, and woollen stuffs; and is seated on the Sevre, 26 ms. SW. of Poitiers. Lon. $0^{\circ} 7' W.$ lat. $46^{\circ} 24' N.$

Majas, pronounced and written, but improperly, Macas, a district of the province of Majas, and Quijos in Peru, now part of Colombia. It lies E. from the Angles, on the sources of the Napo, nearly on the meridian of Washington, and from the Equator 40 lat. $2^{\circ} 30' S.$

Majorca, island of Spain, 60 ms. long and 45 broad, situate in the Mediterranean sea, between Ivica and Minorca. The whole coast is lined with strong towers. The NW. part is mountainous; the rest produces good corn, olive-trees, fine honey, and delicate wine. It has no rivers, though there are a great many fine fountains and wells. The inhabitants are robust and lively, and make good sailors.

Majorca, strong city, capital of the island of the same name. The public squares, the cathedral, and the royal palace, are magnificent. It contains 4 000 houses, built after the antique manner; a university, more ancient than celebrated; and 22 churches, beside the cathedral. The harbour is extremely good. It is seated on the SW. side of the island. Lon. $2^{\circ} 30' E.$ lat. $39^{\circ} 35' N.$

Makefield, pstv. Bucks cy. Penn.

Makefield, Lower, tp. Bucks cy. Penn., on the Delaware, commencing opposite Trenton in N. J. Pop. 1820, 1201.

Makefield, Upper, tp. of Bucks cy. Penn., along the Del. above Lower Makefield. Pop. in 1820, 1367.

Macarex, town of Russia, in the government of Niznei Novogorod, situate on the Volga, 24 ms. ENE. of Niznei Novogorod.

Makrief, or *Makaren*, town of Russia, in the government of Kostroma. It is the capital of the province of Unza, and situate on the river Unza, 80 ms. E. of Kostroma. Lon. $44^{\circ} 14' E.$ lat. $58^{\circ} 50' N.$

Maker, village of Eng. in Cornwall, 7 ms. SE. of St. Germans, on an eminence, forming the W. point of the Hamoaze, at Plymouth. The steeple of the church, called Maker Tower, is a noted seamark. Lon. $4^{\circ} 10' W.$ lat. $50^{\circ} 21' N.$

Makoonli, town of Hindoostan, in the country of Allahabad, 66 ms. S. of Allahabad, and 110 NNE. of Gurrâh. Lon. $84^{\circ} 37' E.$ $24^{\circ} 33' N.$

Makran. See *Mecran*.

Malabar, western coast of the peninsula of Hindoostan, lying between 9 and $14^{\circ} N.$ lat. It is divided among several petty princes, and states. The customs and manners of the inhabitants are very different as well as the productions. The people are, generally, of a dark, olive complexion, with long black hair, and good features. In some places they are distinguished into tribes, or casts, all of which are brought up to the same employments as their parents. These are the Gentoo, of whom see an account under the article *Hindoostan*.

Malacca, or *Malaya*, peninsula of Asia, con-

aining several petty kingdoms; bounded on the N. by Siam, E. by the ocean, and SW. by the strait of Malacca, which separates it from Sumatra. It is 560 ms. in length, and 160 in breadth. It produces few commodities for trade, except tin and elephant teeth; but there are a great many excellent fruits and roots, pepper and other spices, with some precious gums and woods. The pine-apples are the best in the world; and the cocoa-nuts have shells that will hold an English quart. The inhabitants are fond of navigation, war, plunder, migration, adventures, and gallantry. They talk incessantly of their honour and bravery, and speak the softest language of Asia; yet they are deemed the most treacherous, ferocious people on the face of the globe. Their religion is a mixture of Mahometanism.

Malacca, seaport, and the capital of a kingdom of the same name, in the peninsula of Malaya, seated on the strait of its name, 480 miles SE. of Acheen. Lon. $102^{\circ} 5'$ E. lat. $2^{\circ} 12'$ N.

Malaga, seaport and episcopal town of Spain, in Grenada, with two castles, and a good harbour. Its commerce is principally in raisins and excellent wines; and it has a manufacture of cards. The inhabitants are about 40,000. It is seated on the Mediterranean, surrounded by hills, 70 ms. WSW. of Grenada. Lon. $4^{\circ} 10'$ W. lat. $36^{\circ} 35'$ N.

Malaga, pstv. Gloucester city. N. J., 30 ms. S. from Philadelphia.

Malaga, pstv. Monroe city. Ohio, by pstrd. 147 ms. SE. by E. from Columbus.

Malasia, town of Asiatic Turkey, in Aladulia, seated on the W. side of the Euphrates, 90 ms. WNW. of Diarbekar. Lon. $37^{\circ} 50'$ E. lat. $37^{\circ} 30'$ N.

Malawully, town of Hindoostan, in Mysore, with a large mud fort, separated into two parts by a transverse wall. Here is a fruit garden of great extent, planted by the late sultans. It is 27 ms. E. of Seringapatam.

Malchin, town of Lower Saxony, in the duchy of Mecklenburg, seated on the river Peene, where it forms the Lake Camrow, 22 ms. ESE. of Gustrow.

Malcha, town of Lower Saxony, in the duchy of Mecklenburg, between the Lakes Calpin and Plau, 23 ms. ESE. of Gustrow.

Maldegghina, town of France, in the department of Lys, 10 ms. E. of Bruges.

Malden, borough of Eng. in Essex, seated on an eminence on the river Blackwater. Vessels of a moderate burden come up to the town, but large ships are obliged to unload at a distance below, in Blackwater Bay. The custom of Borough-English is kept up here, by which the youngest son, and not the eldest, succeeds to the burgage tenure, on the death of his father. This town carries on a considerable trade, chiefly in corn, salt, coal, iron, deals, and wine. It is 10 ms. E. of Chelmsford, and 27 NE. of London.

Malden, village of Eng. in Surry, 2 ms. SE. of Kingston, with some gunpowder mills, on a stream that flows from Ewel to Kingston.

Malden, Fort now in ruins, was situated on the river Detroit, Essex city. U. C., opposite Isle au Bois Blanc; it is a post of considerable

importance. The village, now Amherstburg, contains about 100 houses. The anchorage between the island au Bois Blanc, and Amherstburg is perfectly safe, and the shore of the main convenient for the erection of wharves, and other naval and commercial purposes. See *Amherstburg*.

Malden, tp. in the city of Essex, U. C., is situated at the mouth of Detroit river, on the E. side of the strait, having Colchester to the E., and Huron to the N., and includes the village of Amherstburg.

Malden, pst. Middlesex city. Mass., it is situated between Medford and Lynn, 5 ms. NE. from Boston. It is united to Charlestown by Mystic bridge. Pop. 1810, 1384; in 1820, 1731.

Maldives, a cluster of small islands, in the Indian Ocean, lying SW. of Cape Comorin. The northernmost, called Head of the Isles, or Kelly, is in lon. $73^{\circ} 4'$ E., lat. $7^{\circ} 5'$ N.; and Maldiva, in which the king resides, is in lon. $75^{\circ} 35'$ E., lat. $4^{\circ} 15'$ N. They are innumerable; but all low and sandy, and most of them uninhabited. They are divided into 13 antolons, or provinces, each having its separate governor, who rules with great oppression. The subjects are miserably poor, and appear to be a mixture of Arabs and Hindoos from Malabar. They supply ships with sails and cordage, cocoa-nuts, oil, honey, dry fish, tortoise-shell, and especially coorics. The king assumes the title of Sultan of the Maldives, king of 13 provinces, and 12,000 Isles.

Malta, an island in the Mediterranean, between Africa and Sicily, 20 ms. long, and 12 broad. It was formerly reckoned a part of Africa, but now belongs to Europe. It was anciently little else than a barren rock; but such quantities of soil have been brought from Africa, that it is now become a fertile island. They sow, however, but little corn, because they can purchase it cheap in Sicily; but they cultivate large quantities of lemon, cotton-trees, and vines, which produce excellent wine.—The number of inhabitants is said to be about 90,000, who speak Arabic and Italian. After the taking of Rhodes, the emperor, Charles V. gave this island to the grand master of the order of St. John of Jerusalem. By the treaty of Paris, in 1814, this island has been guaranteed to Great Britain. Valette is the capital. It is about 60 ms. S. of Sicily, and 200 E. of Tunis in Africa.

Manchester, large and populous town of Eng., in Lancashire, between the rivers Irk and Irwell, and is a place of great antiquity. It has been long noted for various branches of the linen, silk, and cotton manufactures, and is now principally conspicuous as the centre of the cotton trade, which has been much improved by the invention of dyeing and printing. The labours of a very populous neighbourhood are collected at Manchester, whence they are sent to London, Liverpool, Hull, &c. These consist of a great variety of cotton and mixed goods, of which they export vast quantities, particularly to the West Indies, and the coast of Guinea. The manufactures of tapes and other small wares, of silk goods, and of hats, are also carried on at Manchester, from which various sources of wealth it has attained greater opulence than almost any of the trading towns in Eng. Its chief ornaments are the college, the exchange, the collegiate church, another large church, and a spacious market place. By the Irwell, over which is an ancient and lofty stone bridge, it has a communication with the Mersey, and all the late various extensions of inland navigation, particularly the duke of Bridgewater's canal, which is 7 ms. from it. Manilla, large and populous city, capital of Luconia, and the other Philippine Islands. Most of the public structures are built of wood, on account of the frequent earthquakes, by one of which, in 1617, a mountain was levelled;

in 1625, a third part of the city was overthrown by another, when 3000 persons perished in the ruins; and, the next year, there was another less violent. This city is seated on the SE. side of the island, where a large river falls into the sea, and forms a noble bay 30 leagues in compass, to which the Spaniards have given the name of Bahi, because the river runs out of the great lake Bahi, which lies at the distance of six leagues behind it. On the S. it is washed by the sea, and on the N. and E. by the river; being also strongly fortified with walls, bastions, forts, and batteries. Manilla contains about 30,000 souls, who are a very motley race. Here stands the arsenal, where the galleons are built, for which there are from 300 to 600 or 800 men constantly employed, who are relieved every month, and while upon duty, are maintained at the king's expense. The royal revenue is computed at about half a million pieces of eight, exclusive of casualties. Lon. $120^{\circ} 53'$ E. lat. $14^{\circ} 36'$ N.

Mantaca. See *Mataca*.

Mantshuree, conquered China in the 17th century. Their country lies N. from China, and with the utmost absurdity, generally called Eastern Chinese Tartary, in our geographical works. The Tartars, Mongols, and Mantshures, are essentially different nations, more so even than are the French, Germans, and Russians. It would be as correct to call the people of the U. S. northern Spaniards, as to designate the Mantshures, Mongols, or Tartars.

Mantshuria, vast region in Asia, having China proper S., Mongolia W., the Russian Asiatic territories NW. and N., and the sea of Japan, and the Channel of Tartary, or La Peyrouse straits E. It is in a great part occupied by the basin of the Amur, and separated from Asiatic Russia by the vast chain of Yablonoy mountains, stretching from Kiachta to the sea of Ochotsk, between the basins of the Amur and Lena rivers. It was one of the native chieftains of this country who, in 1644, took advantage of the revolution in China, which terminated the dynasty of Ming, in the person of the emperor Zunt-chin, or Tong-tching, and placed himself on the throne of China, and established the now reigning dynasty of Dyn-Fsing. Of the Mantshur family, there have been five monarchs; Thunti, Cang-hi, Kong-tching, Kieulong, and Kai-king. It is very remarkable that two of the Mantshur-Chinese sovereigns have jointly reigned 124 years; Cang-hi from 1661 to 1721, 60 years; and Kien-long from 1735 to 1799, 64 years.

Mantes, town of France, in the department of Seine and Oise, and late province of the Isle

of France. It is famous for its wines, and is seated on the Seine, and over it is a bridge, the great arch of which, although elliptical, is 120 feet wide. It is 31 ms. NW. of Paris. Lon. $1^{\circ} 51' E.$ lat. $49^{\circ} 1' N.$

Mantua, or *Mantuan*, duchy of Italy, lying along the river Po, which divides it into two parts. It is bounded on the N. by the Veronese, on the S. by the dutchies of Reggio, Modena, and Mirandola, on the E. by the Ferrarese, and on the W. by the Cremonese. It is 50 ms. long, and 27 broad, and fruitful in corn, pastures, flax, fruits, and excellent wine. The Mantuan comprehends the dutchies of Mantua and Sabioneta; the principalities of Castiglione Solforina, and Bosolo; likewise the cty. of Novellara. The principal rivers of this country are the Po, the Oglio, and the Vinchio.

Mantua, capital of a duchy of the same name, in Italy, with an archbishop's see, and a university, seated on an island in the middle of a lake. The streets are broad and straight, and it has 8 gates, 21 parishes, 40 convents and nunneries, a quarter for the Jews to live in, and above 16,000 inhabitants. It was greatly noted for its silks, and silk manufactures, which are now much decayed. The air in the summer is very unwholesome; and the lake is formed by the inundations of the Mincio. Virgil was born at a village near this city. It is 35 ms. NE. of Parma, 22 SW. of Verona, and 220 N. by W. of Rome. Lon. $10^{\circ} 50' E.$ lat. $45^{\circ} 10' N.$

Mantua, village on the Schuylkill, opposite the Philadelphia upper bridge, and in Blockley tp. It is strictly a suburb of Philadelphia; its situation is peculiarly eligible for a summer residence to the wealthy inhabitants of the city. The site swells gradually from the Schuylkill, and gives a rich variety to the various buildings and gardens by which it is decorated.

Mantua, flourishing pst. situated in the northern borders of Portage cty. Ohio, and through the southeastern quarter of which runs the Cuyahoga river. Besides several common schools, here is a tolerably respectable grammar school. It contains about 93 families, and 541 inhabitants.

Marmora, sea between Europe and Asia, which communicates with the Archipelago, by the strait of Gallipoli on the SW., and with the Black Sea, by the strait of Constantinople on the NE. It has two castles, one on the Asian, and one on the European side. It is 120 ms. in length, and 50 in breadth, and was anciently called the Propontis.

As the ancient name of the strait between the Archipelago and the Marmora sea, is more used in common conversation in the U. States, than either Dardanelles, or Gallipoli, the modern names, I have thought it necessary to be more particular with this article. There is some difficulty in fixing the limits which the ancients gave to the Hellespont, from the usual vagueness attending their descriptive writing. It is probable, in reality, that neither towards the Archipelago, or Marmora, did ancient authors consider any particular point, as where the strait and sea united. If we turn our eye to a map of that part of Asia and Europe, however, it is easy to fix the general boundaries of the strait in question. A line drawn from Cape Janissary, to the nearest point of the Chersonesus, seems the natural boundary towards the Egean, and where the tranquil surface of the Marmora is changed to a current, must decide the commencement of the Hellespont on the side of Gallipoli. Strabo seems to have viewed the Hellespont as a sea, and not as a strait. With the limits I have stated, the Hellespont is from Cape Janissary, to the opening of the Marmora, above Gallipoli, 36 ms. The current is not equal, but as might be supposed, most violent at the most contracted points. The

mean width, perhaps, falls short of two ms., and at the Dardanelles and Gallipoli, less than one. At these narrows, the current is rapid, particularly in the spring season, when the large confluent of the Black Sea are overflowed. The winds, according to Hobhouse, blow great part of the year, down the strait. This author, like many others established, I cannot but think, a general theory on the phenomena which occurred during his own visit. The Salsetfrigate, in which Mr. Hobhouse passed the Hellespont, was wind-bound at Cape Janissary, from the 14th to the 30th of April. The thermometer stood, according to his own account, between 60° and 70° during the stay of the frigate in the mouth of the Hellespont. With this heat increased, as it is in summer, to between 80° and 100°, the land must become more heated than the water, and of course, an aerial current superinduced from the Mediterranean, towards the plains of Russia. If I was to form an opinion from geographical position, I should say, that during winter and spring, the wind must be down, but on the contrary, during summer and autumn, up the Hellespont; and that the prevalent current must be down, though in not so great a proportion as two to one. The depth of the water between the Egean and Marmora, admits the passage of the largest ships of the line.

The scenery of its shores, from the description given by Hobhouse, must bear a considerable resemblance to many places on St. Lawrence. Generally rising by acclivities more or less abrupt, the prospects are variegated and fine. From some places on the European side, and in clear weather, the summits of Ida are visible, but the climate of that country, from the prevalence of NE. winds, is not remarkable for serenity.

Marseilles, flourishing seaport of France, in the department of the Mouths of the Rhone. The inhabitants are computed at 90,000. It was so celebrated in the time of the Romans, that Cicero styled it the Athens of the Gauls, and Pliny called it the Mistress of Education. It is situated on the Mediterranean, at the upper end of a gulf in which are many small islands; and is partly on the declivity of a hill, and partly in a plain. It is divided into the Old Town and the New. The first appears like an amphitheatre, to the vessels which enter the port; but the houses are mean, and the streets dirty, narrow, and steep. In this part is the principal church, built by the Goths, on the ruins of the temple of Diana. The New town is, in every respect, a perfect contrast to the city, with which it has a communication by one of the finest streets imaginable. The other streets and squares, as well as the public buildings in general, are very elegant. With respect to commerce, Marseilles has been eminent since the days of antiquity; and is now sometimes called Europe in miniature, on account of the variety of dresses and languages. The port is a basin of an oval form, 3480 feet long, 960 broad at its widest part, with 18 or 20 feet depth of water. In the environs of Marseilles, are near 5000 little country boxes of the citizens, called Bastides. In 1640, the plague raged with great violence in Marseilles, and

with still greater in 1720, when it carried off 50,000 of the inhabitants. The late Lord Gadenstone mentions, that Marseilles was a little republic within itself, that the citizens elected their own magistrates, and that the expense of a law-suit never exceeded *two-pence halfpenny*, which sum was lodged by each party with the clerks of court, at the commencement of every process; after which no farther expense was incurred. Marseilles is 15 ms. S. of Aix, 13 NW. of Toulon, and 362 S. by E. of Paris Lon. $5^{\circ} 27'$ E. lat. $43^{\circ} 18'$ N.

Having an entire outline of 770
Area, exclusive of water, about 11,000 sqms.;
7,040,000 acres.

Mean length 150, and mean breadth about 75 ms.

Between lat. 38° and 39° 43' N.

Maryland is the most irregular in its form of any state of the U. S., and contains the least surface when compared with its outline. It is, also, in point of surface, soil, and climate, very much diversified. All those parts of Maryland lying E. from Chesapeake bay, and W. of that stream to the head of tide water, may be considered as alluvial in their formation, and comparatively level and sandy. Above tide water the surface rises, though not very rapidly, into hills, which reach the foot of the mountains. The soil of this middle zone is the best in the state. The mountainous region includes the residue, and presents the common features of the Appalachian system.

Maryland is the first state of the U. S., SW. from Delaware river, which embraces the three great zones of soil; that of alluvion, hilly, and mountainous. In the annexed table, the cities are distinguished which occupy each zone respectively.

The alluvial soil is generally level and sandy, but where due attention has been paid to agriculture, produces good crops of grain, tobacco, and even cotton towards the south. The middle, or hilly section, and some of the mountain valleys, are amongst the best parts of the U. S. for the production of grain, grass, and orchard fruit, tobacco, flax, and hemp. The flour and tobacco of some places on the higher waters of the Potomac, are justly estimated for their excellence.

Commercially, Maryland is naturally connected with some of the best cultivated, most populous, and wealthy cities of Penn.; good roads extend from Baltimore to W. C., Frederickstown, and Hagerstown. That to the latter extends up the Potomac to Cumberland, and from thence to Brownsville, Penn. Part of this road has been constructed by the U. S., and is toll free. The distance from Baltimore to Brownsville, by Frederickstown, Hagerstown, Hancockstown, and Cumberland, is 212 ms., being the shortest line of connexion between the Atlantic ports and the navigable waters of the Ohio.

Other roads intersect the state of Maryland, and connect it with the neighbouring states, particularly Pennsylvania, and facilitate inter-communication with Baltimore. The trade of the Susquehannah, is, however, that which enters most at Baltimore, and has contributed greatly to the rapid increase of that city. See *Baltimore*. The Legislature and people of Maryland, seem recently to have awakened to a full sense of the immense advantages naturally flowing down with the stream of the Sus-

quehannah, and also to those to be derived from opening a water communication between Chesapeake and Delaware Bays. It has been supposed that the produce already (October 1822,) brought down in the current year, from the Susquehannah, exceeds in value 1,000,000 dollars, and must annually increase. It is only necessary to examine the position of Baltimore on a general map of the U. S., to perceive its admirable situation as a commercial mart.

Maryland produces in itself iron ore and mineral coal, with inexhaustible masses of limestone, and other building stone. Furnaces and forges have been long established in this state. Flour and tobacco are its most abundant and valuable staples. Its manufactures are numerous and increasing. In the value of its shipping, it ranks as the third state of the U. S. In 1815, the tonnage exceeded 156,000. For the interests of education in Maryland, see *Baltimore*.

Politically, Maryland is subdivided into the cities of:

| | | Population. |
|-----------------|------------------------------------|---------------------|
| Alleghany | Mountainous | 8,654 |
| Anne Arundel | Hills and alluvion | 27,165 |

Maryport, town in Cumberland, with a good harbour. In 1750, it was only a poor fishing town; but it has now upwards of 3000 inhabitants, who employ many vessels, from 50 to 250 tons burden, in the coal or coasting trade. Here are two ship-yards and a cotton manufactory, and close by is the Roman station, Viro-sidum, where several altars and statues have

been dug up. Maryport is situate at the mouth of the Ellen, in the Irish Sea, 27 ms. SW. of Carlisle, and 297 NNW. of London. Lon. $3^{\circ} 22' W.$ lat. $54^{\circ} 35' N.$

Marysburg Township, in the cty. of Prince Edward, U. C., is situated at the eastern end of the peninsula, which forms the Bay of Quinte, and lies open to Lake Ontario on the S.

Marza Siroco, gulf on the SE. side of the isle of Malta. The Turks landed here in 1565, when they went to besiege Valetta. It is now defended by three forts, two at the entrance of the gulf, and one at the point of land that advances into the middle of it.

Marzilla, town of Spain, in the province of Navarre, near the river Arragon, 30 ms. S. of Pamplona.

Mas d'Angenis, town of France, in the department of Lot and Garonne, on the river Garonne, 24 ms. NW. of Agen, and 50 SE. of Bourdeaux.

Mas d'Aul, town of France, in the department of Arriège, on the rivulet Rise, 8 ms. SW. of Pamiers.

Masafuero, island in the Pacific Ocean, 80 ms. W. of Juan Fernandez. It is high and mountainous, but lowest to the N., and at a distance appears like one hill or rock. It is of a triangular form, about 25 ms. in circumference, and uninhabited, except by numerous seals and goats. There is also plenty of wood, but difficult to be got off, as the heavy surf allows of no good landing place. Lon. $81^{\circ} 40' W.$ lat. $33^{\circ} 40' S.$

Masbate, one of the Philippine islands, almost in the centre of them. It is 80 ms. in circumference, and the natives are tributary to the Spaniards. Lon. $122^{\circ} 25' E.$ lat. $11^{\circ} 36' N.$

Masbrough, village of Eng., in W. Yorkshire, on the river Don, adjoining the bridge of Rotherham. Here are considerable iron works, where all sorts of hammered and cast iron goods are made, from the most trifling article to a large cannon, of which great quantities are exported.

Mascara, the western province of the kingdom of Algiers, 370 ms. long and 130 broad. It is dry, barren, and mountainous, except on the N. side, where there are plains abounding in corn, fruit, and pastures. The S. parts are inhabited by independent wandering tribes, particularly the Agad tribe.

Mascara, capital of the province of the same name, in the kingdom of Algiers, with a strong castle, in which the bey resides. In 1732 it was an inconsiderable place; but is now the only one in the kingdom, which, under the domination of the Turks, perceptibly increases in prosperity and extent. It is not so large as Tremesan, but surpasses it in beauty, having a great number of good houses and newly erected mosques. It stands in the centre of a fertile and populous district, 45 ms. ESE. of Oran, and 19 SW. of Algiers. Lon. $0^{\circ} 40' E.$ lat. $35^{\circ} 54' N.$

Mascat, seaport of Arabia Felix, and the chief town in the province of Oman, with an excellent harbour. It has a castle on a rock, and is very strong both by nature and art, though the buildings are mean. It was taken, in 1508, by the Portuguese, who retained it for a century and a half. The cathedral, built by the Portuguese, is now the king's palace. There is no vegetation to be seen on the sea coast near it, and only a few date trees in a valley at the back of the town, though the inhabitants have all things in plenty. The weather is so hot from May to September, that no people are to be seen in the streets from ten in the morning till four in the afternoon. The bazars or market places are covered with the leaves of date trees, laid on beams which reach from the house tops on one side to those on the other. The products of the country are horses, dates, fine brimstone, coffee, and ru'nos, a root that dies red. Lon. $57^{\circ} 26' E.$ lat. $24^{\circ} N.$

Mascomy, river of N. H., which rises between Dorehester and Lyme, flows into, and carries the water of Mascomy Pond into Connecticut river, 5 ms. below Hanover.

Musk D'Aul, town of France, in the department of Arriège and late cty. of Foix, with a late rich Benedictine abbey. It is seated on the rivulet Rise, 8 ms. SW. of Pamiers.

Musk, lake of Ireland, partly in Galway, and partly in Mayo, about 12 ms. in length and from 1 to 4 wide, and having no visible outlet. It lies N. from lake Corril.

Muskelyne's Isles, group of small but beautiful islands, in the S. Pacific Ocean, lying off the SE. point of Malicollo, one of the New Hebrides.

Muskinonge, river of L. C., flows from a pond of the same name, on the line between Warwick and St. Maurice ctes. L. C., flows SE. and falls into the head of lake St. Peters.

Muskinonge, SW. seigniority of St. Maurice cty. L. C., on lake St. Peters, on both sides of Muskinonge river.

Mason, tp. Hillsborough cty. N. H., 36 ms. S. from Concord. Pop. 1820, 1313.

Mason, cty. Virg., bounded by Ohio river W. and NW., by Wood NE., Kenhawa SE., and Cabell SW.; length 40, mean width 20 ms.; area 800 sqms.

This cty. is washed in its entire length by Ohio, and traversed by Great Kenhawa river. Surface very broken and hilly, though much of the soil near the streams is excellent. Considerable quantities of salt are made on Kenhawa river, from salt water procured by deep digging. Staples of this cty., grain, and flour. Chief

town, Mount Pleasant. Pop. 1820, 4868. Lat. 39° N. and lon. W. C. 5° W. intersect in this city.

Mason, city, Kent.; bounded by the Ohio river NE., Lewis E., and Fleming SE. and S., Nicholas SW. and Bracken W.; length 18, mean width 14 ms.; area 250 sqms. Surface hilly, though very considerable tracts of excellent soil skirt the streams, particularly the Ohio. Staples, grain, flour, whiskey, &c. Massachusetts, in point of soil, is divisible into three distinct zones; mountainous in the west, hilly in the central, and low and sandy in the eastern, or rather south-eastern sections. The state is traversed by three ranges of mountains; one along its western border, separating the basins of the Housatonic from the creeks flowing into the Hudson; a second separating the basins of the Housatonic and Connecticut; and a third between the Connecticut basin, and the streams discharging E. and SE. into the Atlantic Ocean. The last range is not, it is true, a compact ridge, but is nevertheless entitled to the distinction of a mountain, and produces on the geographical features of the state all the effect arising from mountain scenery.

East and SE. of this latter ridge, the soil of Massachusetts is comparatively of an inferior quality, and receding from the mountains towards the sea imperceptibly sinks from hills to plains, flat, sandy, and sterile. This level and sandy character, is, however, in a great degree confined to the SE. cities. In Norfolk, Middlesex, and Essex cities., the hills approach the ocean, and the tide, from the rapid acclivity of the country, ascends but a very short distance inland. Beyond the eastern range of mountains, the valleys of Massachusetts possess a fine, deep, strong, and in many places, an exuberantly fertile soil. The cities of Berkshire, Franklin, Hampden, and Hampshire, are amongst the most diversified, and best cultivated tracts in the U. S., producing grain, pasture, and orchard fruits, in abundance.

Of mineral productions, iron and marble are the only substances of great value found plentifully in this state. Iron is found in Plymouth, and in several other parts of the state; marble is quarried and wrought to considerable extent near Stockbridge. The fine granite of Chelmsford, and Teignmouth, is brought to Boston by the Middlesex canal.

In a commercial point of view, Massachusetts is well situated. Its coast is indented by a number of fine bays, of which the harbours of Boston, Salem, and Plymouth, are the principal. Connecticut river traverses the state, and Merrimac enters the ocean in its NE. angle. From the latter stream to Boston harbour, a fine navigable canal conveys the lumber, stone, and other products of its shores to a profitable market. The obstructions in Connecticut river, have been so far removed, or remedied by short canals, as to open that stream to boat navigation, above the northern limit of Massachusetts.

From the epoch of the first settlement of the colonies of Plymouth and Massachusetts bay, from which was formed the present Massachusetts, its inhabitants have been distinguished for their steady attention to the interests of education. Harvard university at Cambridge holds the first rank in the literary institutions of the U. S. The theological seminary in Andover, Williams college in Williamstown, and Phillips academy in Andover, are all highly respectable institutions. Academies have been established throughout the state, in all the principal towns; and common schools are universal. According to Mr. Morse, there were in 1817, 401 religious congregations; of these, 366 were congregationalists; 91 were baptists; 32 were friends; 14 were episcopaleans, and 8 presbyterians.

The manufactures of Massachusetts are extensive and valuable. As early as 1810, their value amounted to near 22,000,000 of dollars. With the political changes, since that epoch, the manufactures of Massachusetts, like those of other states of the U. S., have fluctuated, but still remain flourishing and respectable. Boston, in respect to tonnage, is the first port, and Massachusetts the first state in the confederacy. With Maine, in 1815, the joint tonnage amounted to upwards of 452,000 tons. The citizens in the seaport towns of this state, are very generally engaged in the fisheries.

The staple exports, are, lumber, whale oil, various manufactures, salted provisions and ar-

dent spirits. In 1820, the domestic produce exported amounted to \$3,861,435.

Politically Massachusetts is subdivided into the following counties:

Massachusetts Bay, is that part of the Atlantic ocean E. from Mass., between cape Cod, cape Ann, and the coast.

Massacre Isle, island of Alabama, to the W. from Dauphin island.

Masserne Mountains. This chain has but recently been introduced to public notice, though a very distinct system, and though unequal, in mass or in elevation to the Alleghanies or Appalachian, is very little, if any less extensive as to range. The Masserne rises first into regular mountain ridges in Missu, about 70 ms. SW. from St. Louis, and preserving a SW. direction through Missu, Ark., and Texas, is lost towards the Rio Grand del Norte. It is pierced by the Arkansasw, Red, Brassos a Dios and Colorado rivers. Its geological structure has never been scientifically examined, and the result published. There is a very remarkable parallelism, between the Appalachian and Masserne systems, and the very singular curvature produced on its rivers by the former, is also produced by the latter. The Masernes are called the Ozark mountains by Hall, as it probably was not known to this author, that Ozark is the vulgarism for Arkansasw, used by hunters, trappers, &c.

Mecca, ancient and very famous town of Asia, in Arabia the Happy; seated on a barren spot, in a valley, surrounded with little hills, about a day's journey from the Red Sea. It is commonly, though erroneously supposed, that Mecca became an object of religious veneration to the Arabians, from being the birth place, and seat of Mahomet's mission. It was considered a holy city by that people, many ages before the birth of Mahomet. Two ms. from the town, is the hill where they say Abraham went to offer up his son Isaac. Mecca is governed by a sheref, who is a temporal prince, and his revenue is increased by the donations of Mahometan sovereigns. It is 34 ms. ENE. of Jidda, the seaport of Mecca, and 220 S. by E. of Medina. Its present pop. about 18 or 20,000. Lon. $40^{\circ} 55'$ E. lat. $21^{\circ} 40'$ N.

Mechoacan, ancient province, now a state of the republic of Mexico. Whilst the Spanish power existed in Mexico, Mechoacan was known as the intendancy of Valladolid. Situated on

the western declivity of Anahuac, intersected with hills and charming valleys, which exhibit to the eye of the traveller, a very uncommon appearance under the torrid zone, extensive and well watered meadows. Valladolid enjoys generally a mild and temperate climate, exceedingly conducive to the health of the inhabitants. It is only when we descend the table land of Arico, and approach the coast, that we find a climate in which the new colonists, and frequently even the old inhabitants, are subject to the scourge of intermittent and putrid fevers. The general level, independent of particular mountain summits, differs in relative elevation from the low shores of the Pacific to the fine plain between the hills of Aguascalientes, and the villages of Teipa, and Petatlan, 6396 feet above the surface of the ocean.

In this fine country, the fruits and grain of the temperate, is followed, and frequently intermixed with the plants of the torrid zone. Cotton and indigo, are its most valuable vegetable staples.

Valladolid contains two cities of considerable magnitude, Valladolid the capital, and Pascararo. Tzintzontzan, bears the name of a city, but is in reality, a poor Indian village. It contains a part of the volcanic regions of Mexico. See *Torullo*. Within its limits, are the mines of Zitiquaro, Anganguero, Tlapaxahua, the Real del Oro, and Inguarón.

Mechoacan is from NE. to SW., about 250 ms., with a mean width of 100; area 25,000 sqms. It lies between lat. 18° and $20^{\circ} 40'$ N., and is in a peculiar manner devoid of rivers, or harbours. It is bounded by the Pacific Ocean W., Jalisco, or Guadalupe NW., Guanajuato N., Queretaro and Mexico E., and Mexico S. and southwest.

Mechoacan, capital of the state of the same name, is elevated 6396 feet above the level of the ocean, at lat. $19^{\circ} 42'$ N. Snow has been known to fall in its streets. The aqueduct which supplies this city with potable water, cost upwards of 900,000 dollars. See *Mechoacan* and *Valladolid de Mechoacan*.

Mediterranean, sea between Asia, Africa, and Europe, extending from the straits of Gibraltar to the coasts of Syria and Palestine, above 2400 ms. but of unequal breadth. It communicates with the Atlantic Ocean by the straits of Gibraltar, and with the Marmora by the strait of Gallipoli. There is no tide in this sea, and a constant current sets in from the Atlantic through the straits of Gibraltar. It contains many islands, several of them large, as Majorca, Corsica, Sardinia, Sicily, Candia, and Cyprus. The eastern part of its borders, and Asia, is sometimes called the *Indus*, and the W. to 37° E. lat. 31° to 44° N.

The Mediterranean is the largest body of that name, which extends to the eastern coast of Africa from 30° to 40° N. lat. The articles Black Sea, Danube, Dnieper, &c. have already been taken notice of, and which are connected with the Black Sea, taken in its

utmost extent, the Mediterranean basin extends from the sources of the Nile, about N. lat. 8° , to those of the Dnieper, N. lat. 55° , or through 43° of lat., equal to 2988 English ms. Lat. 38° N. is about the mean parallel of the Mediterranean Sea itself, though its extremes reach from lat. 31° to 46° N. This great inland sea is not alone a separating water, between Europe and Africa, but also between two strongly contrasted land tracts, as respects their fitness for human residence. The European side is as remarkable for the number of rivers, deep gulfs, and fertility of soil, as is the coast of Africa for its dull uniformity of outline, general want of rivers, and aridity of soil. The Nile pours its far drawn volume into the NE. angle, and a narrow strip of arable surface stretches along the African coast, opposite the western extremity of the Mediterranean; but except the delta of the Nile, and the confined tract of Barbary, the far greater part of northern Africa is desert sands and rocks. The African, or more correctly, the Arabian desert, is again protruded northwards, between the Mediterranean and Euphrates. Thus from Tripoli to Cilicia, with very partial exceptions, the Mediterranean is skirted with a wide waste of sand and rocks, extending 1400 ms. With Asia Minor these harsh features disappear; and from Cilicia to the Atlantic Ocean, expand around the Euxine, Marmora, Ægean, Adriatick, and the western Mediterranean, one of the finest regions of the Earth.

The Mediterranean is naturally divided into two unequal sections by the projecting coasts of Africa and Italy, and the intervening island of Sicily. The western gulf lies in form of a triangle; base 1200 ms. from the Straits of Gibraltar to Calabria, and altitude 500 from the African to the French coast, with an area of 300,000 sqms. The eastern Mediterranean extends from the coast of Tunis and Tripoli, to that of Syria, 1500 ms., and including the Archipelago and Gulf of Venice, will average 500 in width, and comprise an area of 750,000 sqms. The whole surface of this sea will therefore exceed a million of sqms. The effect of the Mediterranean on the climate of Europe, I have slightly noticed in the article *Earth*.

The Straits of Gibraltar, have a constant current setting eastward into the Mediterranean. Evaporation on the recipient and the greatly superior area of the Atlantic, satisfactorily accounts for this current. Though there is, it is probable, a small tide of attraction, in the Mediterranean, it is rendered imperceptible by the constant fluctuating and unequal wind tides. In addition there is not much difference between the water in the Atlantic Ocean and Mediterranean. The surface of the latter has either lowered in the last 2500 years, or, the ancient harbours and coasts have been raised by alluvion. The admission of one of these revolutions is necessary to reconcile to truth the general facts of history.

From the geography of the liad, the eastern branch of this stream, ought to be the least, but is found far the most considerable. They unite, however, and are lost in the marshes of the Hellespont near Koum Kale.

Mendham, pst. Morris cty. N. J., 7 ms. W. from Morristown. Pop. 1820, 136.

Mendip-Hills, mountainous tract of Eng. in the NE. of Somersetshire, famous for its coal, calamine, and lead; the latter said to be of a harder quality than that of other counties. Copper, manganese, bole, and red ochre, are also found in these hills. On their summits are large swampy flats, dangerous to cross.

Mendlesham, small town of Eng. in Suffolk, 18 ms. E. of Bury St. Edmunds, and 82 NE. of London. Lon. $1^{\circ} 12'$ E. lat. $52^{\circ} 24'$ N.

Mendoceo, Cape, cape of N. America, on the Pacific coast. Lon. W. C. 48° W. lat. 49° N.

Mendon, pst. Worcester cty. Mass., 37 ms. S. W. of Boston, and 12 N. of Providence, R. I. Pop. 1810, 1819, in 1820, 2251.

Mendon, tp. Monroe cty. N. Y., 12 ms. S. from Rochester. Pop. 1820, 2012.

Mendoza, city of Cordova, in the United Provinces of La Plata, at the foot of the Andes, on one of the sources of the Colorado, about 120 ms. SSE. from Santiago in Chili. Lon. W. C. 9° E. lat. $33^{\circ} 50'$ S.

Mendrah, province of the kingdom of Fezzan, with a town of the same name, 60 ms. S. of Mourzook. Although much of the land in this province, is a continued level of hard, and barren soil, the quantity of trona, a species of fossil alkali, that floats on the surface, or settles on the banks of its numerous smoking lakes, has given it a higher importance than that of the most fertile districts.

Menehould, St., ancient and considerable town of France, in the department of Murne, and late province of Champagne. St. Menehould is 20 ms. NE. of Chalons, and 110 E. of Paris. Lon. $4^{\circ} 59'$ E. lat. 2° N.

Mentor, pst. Geauga cty. Ohio, on Lake Erie, W. from Grand river, and opposite Painsville. Pop. 1820, 452.

Mentz, late archbishopric and electorate of Germany, in the circle of Lower Rhine; bounded on the N. by Hesse and Wetteravia, E. by Franconia, S. by the palatinate of the Rhine, and W. by the electorate of Treves. It produces much corn, fine garden fruits, and abundance of excellent wines. In 1798, this archbishopric and electorate, then the first state of the empire, was moved to Ratisbon, and all other bishoprics were secularized.

Mentz, or *Mayence*, city of Germany, capital of the late electorate of Mentz. It is well fortified, and deemed to be a barrier fortress. The palace, called Martinsburg, is a considerable building, partly ancient and partly modern; and opposite the mouth of the Maine, is a castle, called Favorita, with its fine gardens and water-works. The university, founded in 1477, has lately received considerable improvements. Of the hospitals, that of St. Roch is worthy of notice for its printing-office, and manufactures of stuffs and stockings. The city is built in an irregular manner, and plentifully provided with churches. In the cathedral, which is a gloomy fabric, is what they call a treasury, containing a number of clumsy jewels, some relics, and a rich wardrobe of sacerdotal vestments. Mentz is one of the towns which claim the invention of printing; and the growth of the best Rhenish wine, is limited to a circle of about 5 ms. round it. It is seated on the Rhine, just below the influx of the Maine, and on the opposite side, is the town of Cassel, connected with it by a bridge of boats. It is 22 ms. WSW. of Frankfurt, and 70 E. by N. of Treves. Lon. $8^{\circ} 10'$ E. lat. $49^{\circ} 58'$ N.

Mentz, tp. Cayuga cty. N. Y., on the Great Western Canal. The pstv. in Mentz, is called Montezuma; 12 ms. NW. from Auburn. Pop. 1820, 3010.

Mennuf, town of Egypt, situate in a well-cultivated country, near that branch of Nile which flows to Rosetta, 40 ms. NNW. of Cairo.

Menzala, town of Egypt, situate near a lake of the same name, 60 ms. long, separated from the Mediterranean by a narrow slip of land. It is 20 ms. SSE. of Damietta, and 73 NNE. of Cairo. Lon. $32^{\circ} 2'$ E. lat. $31^{\circ} 3'$ N.

Mequinenza, town of Spain, in Arragon, at the conflux of the Segra with the Ebro, 58 ms. ESE. of Saragossa, and 180 ENE. of Madrid.

Mequinez, city of the kingdom of Fez, and a capital of the empire of Morocco. It is seated in a delightful plain, having a serene and clear air, for which reason the emperor resides in this place in preference to Fez. Mequinez is 58 ms. W. of Fez. Lon. $5^{\circ} 46'$ W. lat. $33^{\circ} 40'$ N.

Mer, town of France, in the department of Loire and Cher, 11 ms. NNW. of Blois.

Meran, handsome trading town of Germany in the Tirol, capital of Erschland, seated on the Adige, 12 ms. W. of Salzburg, and 100 S. by S. of Longon. Lon. $2^{\circ} 25'$ W. lat. $47^{\circ} 51'$ N.

Mercer, pstv. Somerset cty. Maine, by road 94 ms. NNE. from Portland.

Mercer, *cty.* Penn., bounded by Trumbull *cty.* Ohio, W., Crawford *cty.* Penn. N., Venango E., Butler SE. and Beaver S.; length 52 ms., breadth 26; area 830 sqms. This *cty.* is drained by the Shenango, and Neshanoc branches of Big Beaver. Surface moderately hilly, and soil productive in grain, meadow grass, and orchard fruits. Staples, grain, flour, whiskey, &c. Chief town, Mercer, 57 ms. a little W. of N. from Pittsburg. Pop. 1820, 11,681. Ctl. lat. $41^{\circ} 15'$ N. lon. W. C. $3^{\circ} 15'$ W.

Mercer, *pslv.* borough, and seat of justice, Mercer *cty.* Penn., on the W. side of Neshanoc creek, 57 ms. a little W. of N. from Pittsburg. Pop. 1820, 506. Lat. $41^{\circ} 13'$ N. lon. W. C. $3^{\circ} 15'$ W.

Mercer, NW. tp. of Butler *cty.* Penn., on the waters of Slippery-rock creek. Pop. 1820, 641.

Mercer, *cty.* of Kent., bounded by Lincoln SE., Casey S., Washington W., Franklin N., Kentucky river, or Woodford and Jessamine NE., and Garrard or Dick's river E. Length 26 ms., mean width 14; area 350 sqms. Chief town, Harrodsburg. Pop. 1820, 15,587. Ctl. lat. $37^{\circ} 47'$ N. lon. W. C. $7^{\circ} 32'$ W.

Mercer, *cty.* Ohio, bounded W. by Ind., N. by Vauwert, E. by Allen and Shelby, and S. by Darke. Length 25 ms., breadth 24; area 560 sqms. The surface of this *cty.* is generally level, and in part marshy. An extensive inundated tract in its centre gives source to the Wabash and Miami rivers. The soil, where sufficiently dry for agricultural purposes, is excellent. It was formed from the new purchase, and therefore not included in the census of 1820. Ctl. lat. $40^{\circ} 34'$, lon. W. C. $7^{\circ} 32'$ W.

Mercersburg, *pslv.* Franklin *cty.* Penn., on the W. branch of Conegocheaque, 16 ms. SW. from Chambersburg.

Meriden, *pslv.* Madison *cty.* Miss.

Merion, Lower, tp. Montgomery *cty.* Penn., the lowest of the two tps. of that *cty.* SW. from the Schuylkill. Its E. angle is 5 ms. above Philadelphia. Pop. 1820, 2256.

Merion, Upper, tp. Montgomery *cty.* Penn., above the preceding. Pop. 1820, 1385.

Merionethshire, *cty.* of N. Wales, bounded on the N. by Caernarvonshire and Denbighshire, on the E. by the *cty.* of Montgomery, on the S. by Cardiganshire, and on the W. by the Irish sea. It is 36 ms. long, and 34 broad. The principal rivers are the Dee and Dovy; and it has a great mountain, the Cader Idris, one of the highest in Wales. The air is sharp, but the country feeds great herds of cattle. Merionethshire contains 6 hundreds, four market towns, 57 parishes, and sends one member to parliament. Harlech is the capital. Pop. 1801, 29,506; in 1811, 30,924, and in 1821, 33,911.

Merutz, Meritch, or *Merrich*, an important fortress and city of the Deccan of Hindoostan, situated near the N. bank of the river Kistna, 70 ms. SW. of Visapour.

Merk, river of the Netherlands, which running N. by Breda, afterwards turns W., and falls into the Maese, opposite the island of Overflacker, in Holland.

Mermentau river, rises in the prairies of Opelousas, interlocking with the sources of the Calcasieu and Teche. The Mermentau is formed by the Nezpique, Cane, Plaquemine Brulé, and Quene Tortue. This stream may indeed be strictly called the river of Opelousas, as it drains the central parts of that district, and all the intermediate ground between the water courses, except a very narrow strip of wood on their immediate banks, is prairie. The whole country watered by this river is flat, and totally without stone, not even a pebble is to be seen. The timber in the woods is oak, hickory, ash, sweet gum, in the swamps cypress, and many other kinds of trees; pine is also found in more or less quantity on all the confluent of Mermentau, but towards the NW. sources of the Nezpique this tree is found in great abundance; oak is, however, the principal timber. Below the junction of the Plaquemine Brulé, Cane, and Nezpique, live oak begins to appear, and towards the sea coast, is found in considerable quantity, growing upon low ridges, which run parallel to, and appear to have been, at some past time, isles in the gulf. The tide rises in the Mermentau above the junction of Nezpique, Cane, and Plaquemine Brulé; however, when the waters of the Sabine Calcasieu and Mermentau are swelled by rain, and the NW., N., or NE. winds prevail, no tide passes their respective outlets. The soil on Mermentau is generally sterile, though superior in fertility to that on the Calcasieu and Sabine.

Mermentau Lake, is in every respect similar to those of the Sabine and Calcasieu, except in point of extent, being considerably less extensive than either of the two latter. Mermentau lake is less destitute of timber along its border than the other lakes westward, though the greatest part of the extent in its vicinity is a grassy morass. The outlet from the lake to the sea, is about one-fourth of a mile wide, very winding, and in many parts dilated into small lakes. A bar at the mouth prevents the entrance of vessels drawing more than four feet water.

Merom, pst. and scat of Justice, Sullivan cty. Ind. See *Miriam*.

Mero, strong town of Asia, in the peninsula beyond the Ganges, and in the kingdom of Pegu, 140 ms. SW. of the town of Pegu. Lon. $98^{\circ} 36'$ E. lat. 16° N.

Merrimack, river of the U. S. which rises in Grafton cty. N. H., and after running in a SE. direction through the state, enters Mass., near Dunstable. It then makes a sudden turn to the NE. and empties into the Atlantic Ocean at Newburyport. Its course is very crooked, and the navigation interrupted by frequent falls and cataracts. The Merrimack basin is about 130 ms. in length, with a mean width of 36; and embraces an area of 4359 sqms. The navigation of this stream has been more improved by art than any other stream of the U. S. Newburyport stands on the S. side of the bay at its mouth; vessels of 100 tons ascend to Haverhill, 12 ms. to the head of tide water. From Haverhill to Concord the navigation of the Merrimack is artificially improved. The Middlesex canal was cut from Boston Harbour, to the banks of the Merrimack, at the falls above Chelmsford. The great feeder of this canal is Concord river, flowing N. out of Mass., and precipitated from the table land of Middlesex into the valley of the Merrimack, below Chelmsford. The canal commences above Patucket falls. It is carried over, and on the level of Concord river 11 ms., and thence down the sloping intervening ground to Boston harbour. The whole length of this line canal is $29\frac{1}{2}$ ms., an entire fall of 1007 feet, by 13 locks. The canal is 24 feet wide, with a depth of 4 feet. The locks are 90 feet by 12 feet, and of excellent masonry. Another fall has been cut around Patucket falls, in order to connect the navigable water above, and the Middlesex canal with the tide water below. The Patucket canal does not reach tide water, but below the falls the stream, though rapid, is navigable, and in 43 ms. falls 36 feet, and reaches the tide at Haverhill. Above the outlet of the Middlesex canal, are three other short cuts at several places. The Bow canal occurs first below Concord; is followed 6 ms. still lower down by Hookset canal; Amoskeag canal was made 8 ms. below Hookset; and in 9 ms. below the latter 6 short cuts have been made round as many rapids or falls. Cromwell's falls have also been passed by a canal 14 ms. below Amoskeag; and 15 ms. still lower is the Wicase canal, the last above that of Middlesex. See *Massachusetts* and *New Hampshire*.

Merrimack, cty. of N. H., formed recently from the tps. adjacent to, and including the state capital, Concord. For cty. lat. see Concord.

Metzger's, pst. Bedford city. Penn.

Metzora, village of Greece on the mountains between Albania and Thessaly. From this village it is supposed that the modern name of Pindus has been taken.

Metzova Mountains, or the modern Pindus, chain which separates Thessaly from Albania. Mount Oeta, branching SE. towards the Gulf of Euboea, the chain of Othrys separating southern from northern Thessaly, and terminating near the Egean Sea, in Pelion, Parnassus, and Parnassus, are ramifications of the Metzova. The nucleus of this mountain system is about N. lat. $39^{\circ} 20'$, where it rises into the region of perpetual snow. The rivers flow in various directions from this elevated tract; the Aita, ancient Arachthus, into the Gulf of Arta; the Archelous, now Aspropotamo, and the Evenus, now Fidaic, into the Gulf of Cephalonia; the Cephusus, now Mavroneri, into Lake Toplias, and the Peneus, now Salembria, or Selampria, into the Egean Sea.

The whole system of Pindus, is, however, only a minor continuation of the vast mass of mountains which separate Macedonia from Albania, and which latter is again only an embanchment of the still more considerable chain of Myria or Haemus. The ancient Drilo, now the Driu, with a number of other mountain streams, drain Albania, and flow W. into the Gulf of Venice; whilst from the same chain rise the numerous sources of the Axios, now Vardari, and after having watered the fine valley of Macedonia, enter their common recipient, the Gulf of Salonica.

Meulan, ancient town of France, in the department of Seine and Oise, and late province of the Isle of France, built in the form of an amphitheatre, on the banks of the river Seine, over which are two bridges, 20 ms. NW. of Paris. Lon. $1^{\circ} 57'$ E. lat. $49^{\circ} 1'$ N.

Meurthe, department of France, including

part of the late province of Lorraine. It is so called from a river that rises in the department of the Vosges, and watering Lunéville and Nanci, falls into the Moselle. Nanci is the episcopal see of this department.

Meuse, department of France, including the late duchy of Bar. It takes its name from the river Meuse, or Maese. Bar-le-Duc is the capital. See *Muese*.

Mewari, considerable town of Japan, in the island of Nippon, with a royal palace, where the king sometimes resides. It is seated on a hill, at the foot of which are vast fields of wheat and rice, with fine orchards, full of excellent plums.

Meout, hilly and woody tract of Hindoostan Proper, lying on the S.W. of Delhi, and on the W. of Agra, confining the low country, along the W. bank of the Jumna, to a comparatively narrow slip, and extending westward about 130 ms. in length. From N. to S. it is 90 ms.

Mearco, Republic of, an immense region of N. America.

The country out of which this republic has been formed, is peculiar as respects the features of its geography. It extends from lat. 15° 50' to 42° N.: the intermediate space embracing every variety of soil, from the most recent alluvion to mountain valleys, or rather plains, of near 8000 feet above the contiguous oceans. These elevated plains are again broken and decorated by colossal summits, rising from 12 to upwards of 17,000 feet.

In one of those aerial valleys, stands the city of Mexico, 7,400 feet above the level of the Gulf of Mexico. From this difference of elevation, and from embracing such an extensive range within and without the tropics, Mexico may be considered as possessing every climate of the earth, and capable of producing every vegetable necessary to the wants or the luxuries of human life. Its metallic wealth is no less abundant than its vegetables. From its bowels are extracted many of the most useful, and all the precious metals.

Mexico is perhaps better calculated than any other part of the earth, to form a political community capable of producing within its own limits, all that the necessities, the arts, or elegancies of society can demand.

As a vice-royalty of Spain, Mexico was subdivided into the following intendancies.

The above table was constructed from the data afforded by Humboldt, in his Political Essay on New Spain, Black's Translation, vol. ii., rejecting fractions. There is some confusion and contradiction in the statements of this author, which diminish their authority; but we may suppose that in the aggregate he was nearly correct. Humboldt's estimate is for 1803, or 23 years past. If the ratio of increase given by this author is adopted, Mexico must now contain 8,481,000 inhabitants. If we compare the two countries of the U. S. and Mexico, and allow for the former the advantage of better political institutions, and to the latter superior mildness of climate, we may reasonably concede that their respective rates of increase cannot be very widely different. In the middle of 1803, the pop. of the U. S. did not materially differ from 6,000,000; now, August, 1822, it amounts, it is probable, to very nearly 11,000,000, but with a small excess above that number. Therefore, if we compare the two masses together by a simple statement of the rules of proportion, Mexico ought now to possess upwards of 10,700,000 inhabitants, and making every allowance for the ravages of war, it is evident, that if the basis of the calculation given by Humboldt is admitted, Mexico must now contain at least, eight and a half millions of inhabitants.

It may be observed, that in this table, No. 2, are included the three small territories of Colima, in Jalisco; Tlascala, in Puebla; and New Mexico, or rather Santa Fe, of New Mexico.

Table No. 1 expresses the area actually peopled, but No. 2 embraces the entire superficies of the Mexican republic. No. 2 is taken in great part from Tanner's map, and exhibits, if correct, how nearly accurate were the estimates appended to No. 1, as respects the progressive pop. of this country.

About one half the extent and pop. of Mexico is within the great river system of the Gulf of Mexico. It is in vain to attempt any specification of the Mexican pop., as our data is too vague to admit decisive estimates. One circumstance is too striking, however, to be omitted. Mexico has no slaves worth notice in a general statistical survey; that class of its pop. not amounting, at the utmost, to more than 10,000; or as 1 to 384 of the entire body of the people. The civilized Indians form more than two-fifths of the whole, and are the labouring, productive, and efficient, though not the ruling people.

Few civilized regions of the earth are less known than Mexico. The following account of the manufactures of Mexico is an extract from an English work, and deserves very serious attention.

The two first of the Mexican manufactures are those of cotton and wool, which are established upon a very large scale in the cities of Queretaro, Pueblo, and St. Michael, in the immediate neighbourhood of Mexico. The country itself furnishes the cotton and wool in great abundance, it being a mistake of English writers, that no part of America can afford the ordinary and staple wool of manufactures. This wool is as easily raised in Mexico, as in Lancashire or Lanarkshire. We are now translating from a French author who visited Queretaro, the Manchester of Mexico, sixteen years ago. "I visited Queretaro," he adds "with the greatest interest, that I might inform myself of the extent of the wool and cotton manufactures, and I am therefore enabled to say that, except the principal towns in France and Eng., Queretaro is a manufacturing town of the first rate and magnitude. The establishments at his period (1803) were divided into factories and workshops, in the latter of which the workman worked at home at the cost of their masters.—There were cotton factories, as large as any cotton factories in France, and more than 300 workshops. They had worked up last year about two millions worth (in dollars) of woollen cloths, bay, druggets, serges, and cotton stuffs."

The next fabric is that of leather, chiefly in anning, which is carried to great perfection. It is unnecessary to add that the vast plains afford hides in abundance, and that the bark is equally plentiful. The Mexicans thus produce all the leather for their own consumption, and under general commerce might export much.

The linen and silk factories have not as yet attained to any extent, but from no other reason than because Spain, whilst they were dependent upon her, discouraged all linen fabrics, and completely destroyed a most flourishing silk trade. Will it be credited by the people in Eng. that about forty years ago silk was nearly as common in Mexico, as in Asia and Italy; but that the Mexicans, on rising one

morning, found all the mulberry trees in the empire cut down, and of course the silk universally destroyed. It seems that the Cadiz merchants, finding their commerce affected, had procured this secret order of the Viceroy, who had contrived to execute it with the same secrecy. The history of the world does not furnish a more atrocious example of the true spirit of monopoly.

The manufactory next in order is that of tobacco, which is made into segars and in part supplies all Europe. This produce is very great amounting to nearly ten millions of dollars annually. An article of the first importance, when we consider the quantity consumed in Eng., and for the supply of which we now depend upon the Americans.

The next manufacture is that of gunpowder, which is equally as considerable as that of tobacco and which, by the way, proves the sugatory nature of the recent proclamations in Europe against supplying the independents with stores of War—Gunpowder is as plentiful in Mexico as in Eng.; and all America may hereafter be supplied from that quarter.

Soap and soda are the manufactures next in order, both as to quantity and value; soda being particularly abundant, and so cheaply raised and worked as to become an article of vast future export. This soda very far exceeds in quality, any that can be procured from any other quarter, and the French chemists and dyers most sanguinely anticipate, that Europe may hereafter draw nearly the whole of her soda from S. America, as she imports her potash from the U. S.—Oil, tallow, spermaceti, honey and wax, abound likewise in every Intendancy, and must greatly add to the future value of this immense empire to the general commerce of Europe. "In no part of the world," says the French author from whom we are translating, "is there such a variety and abundance of every thing necessary to every want of man as in this kingdom of Mexico; in no country is every thing raised so cheaply."

Besides the manufactures above enumerated, every town almost through this vast empire has its own manufacture, and particularly the large towns in the immediate vicinity of the capital. We have before had occasion to say that the country is in shape like a hat—the high main and table land of Mexico being the crown, and the narrow line of the coast being the rim. In the middle of this crown, or table land, is the city of Mexico, half way, or 300 ms. from Vera Cruz the Atlantic port, and the same distance from Acapulco, the chief port of the Mexican empire on the Pacific Ocean.

The country as we have before said, is divided into fifteen Intendancies, each of which has a subordinate Governor and a bishop's see, and cathedral of its own. In all these great cities are seated some manufacture peculiar to the places; some of them are celebrated for their pottery, some for their hats, some for their work in jewellery. Indeed, in this latter work the Mexicans so particularly excel, as to rival any manufactory in Europe, not even excepting the establishments in Switzerland and the workman of the Palais Royal.

In these interesting particulars the

we doubt not, will be strongly impressed with the same conclusion with ourselves; namely, how infinitely various and important is the produce, and must be the future exports, of Spanish America, in comparison with those of the U. S.; and thence, by a necessary consequence, what a formidable rival the former will be to the latter. And let it not escape our attention, that in the rivalry Great Britain must be the gainer, as her magazine and market are proportionably extended."

See the different states under their respective heads.

From its position, Mexico has a natural connexion with Asia, Europe, and with every part of N. and S. America. It is rather deficient in both Oceans in good harbours, and from the elevation of the interior country it can never derive much benefit from the few rivers which flow from its mountain valleys. The interior and transport commerce is carried on with mules of burden. Goods to the value of upwards of 18,000,000 of dollars, are thus annually transported from the Atlantic coast over the interior table land, whilst the flour, hides and metals descend from the central table land to Vera Cruz. Humboldt has shown, that through the city of Mexico, if a canal was otherwise practicable, it would demand from 330 to 340 locks to unite the two oceans, and concludes rationally that land carriage is alone practicable, for useful commercial purposes, between that great city, and the opposite oceans. The following condensed view of the rivers of the Mexican empire, flowing into the Mexican Gulf will close this article.

The following are the principal rivers of Mexico, which are discharged into the Gulf of Mexico. No stream of any consequence exists on the western coast of Yucatan; and, it is only when reaching the influence of the mountains of Guatemala, and Mexico, that rivers of much magnitude are found flowing from the interior country.

The Sumasinta is discharged into the Bay or Gulf Terminos, which is, indeed, rather an estuary of a number of rivers, than a mere bay.

The St. Pedro falls into the Bay of Campeachy to the W. of the Sumasinta. Both of these streams rise in the mountainous table land of Guatemala, and are of considerable magnitude, but the interior country, or even the coast, is very imperfectly known.

The Guassacualco is a short but very important stream, falling into the Gulf of Mexico at its extreme southern extension. This stream rises in Oaxaca, interlocking with the source of the Chimalapa, within 50 direct ms. from its mouth. This is one of the channels of communication mentioned by Humboldt, as suitable to unite the waters of the two American oceans. The entire distance from the Gulf of Mexico to the Pacific Ocean, by the valleys of the two rivers Chimalapa, Guassacualco, does not exceed 120 ms., but the nature of the intermediate country is too little known, to admit the formation of any rational conclusion, upon the practicability of an artificial connexion of the sources of these rivers.

The Alvarado follows the Guassacualco, and like the Sumasinta, is poured into a spacious

bay, the recipient of many streams, precipitated from the high table land of Oaxaca. The Alvarado interlocks with the sources of the Chicometepec, and both roll down steep slopes forming an entire descent of upwards of 7000 feet. We are now arrived upon the extensive mountain plains of Anahuac, and though within the tropics, in a very temperate climate. The elevations are, however, such as to preclude not only much natural, but extensive improvements of the artificial navigation by water into the interior. In summer the rivers are nearly exhausted by evaporation, and in winter swelled to torrents. The main spine of the chain of Anahuac also approaching so much nearer to the Gulf of Mexico than to the Pacific Ocean, renders the rivers in this region much more abridged in their length, which enter the former, than those falling into the latter recipient.

The Rio Blanco, the north-western branch of the Alvarado, rises at the base of the enormous volcanic summit of Orizaba, the Citlaltepeltl of the Aztecas. It is, I believe, from the Rio Blanco, that the immense quantities of the pumice stone, scattered along the shores of the Mexican gulf, have been floated. I have seen this substance in great abundance upon the coasts of Louisiana, and Texas.

From the Alvarado to the bay of Tampico, in a distance of 300 ms., not one deep indenting of the coast, except Tamiagua, exists. The city of Vera Cruz intervenes, but that entrepot of Mexican commerce, and rendezvous of the Spanish navy, is built upon a low sandy beach, without either a harbour or fresh water. The coast, indeed, entirely round the Gulf of Mexico, with very partial exceptions, is low, sandy, or marshy, and in most places very unhealthy in summer and autumn.

The mouth of the Tampico bay is at N. lat. 22° 20' W. lon. W. C. 21° 15'. The Tampico receives the united waters of the Rio Altamira, from the intendancy of St. Louis Potosi, and the Tula, or Moctezuma, from the valley of Tenochtitlan, in which the city of Mexico is situated. The Tula, as it is called, in the higher part of its course on the Moctezuma, is in many respects one of the most remarkable streams of the earth. The valley of Tenochtitlan, from which it flows, cannot be better represented than by a saucer turned bottom upwards; the rim representing the spines of the mountains out of the intervening valley of which it flows. This valley, known by its Aztec name of Tenochtitlan, comprises about 1700 sqms., of which one-tenth part is covered by lakes. In its natural state, only one narrow brook, between very high and precipitous banks, issued from this extraordinary valley, and carried its waters into the Tula.

There are beside some smaller five principal lakes, Zumpango, San Christobal, Chalco, Xochimilco, and Tezcuco. They do not lie upon a level, Zumpango is nearly 30 English feet above that of Tezcuco, and Xochimilco forms a mean between the two former.

The higher lakes are composed of fresh water, but the lowest, that of Tezcuco, is salt. Their proportions and extent, as given by Humboldt, by whom they were surveyed, are Xochimilco

and Chalco 50 sqms.; the lake of Tescuco 80 sqms.; San Christobal 28, and Zumpangnio 10 sqms.

These lakes are supplied by a few small rivers and innumerable torrents poured down from the adjacent mountain slopes. The Tezcucuo receives the rivers of Papolotla, Tezcucuo, Teotihuacan, and Tepeyacac (Guadaloupé;) and the Zumpagno is supplied by the streams of the Pachuca, and Guatitlan, the latter is the largest river of the Mexican valley.

It may be noted as a curious fact, that the two cities of the great river system of the Atlantic, in North America, which occupy the extremes of elevation, New Orleans and Mexico, that both are subject to partial inundation, and both stand indebted to artificial defence for preservation against the encroachments of water. Mexico stands 7468 feet above New Orleans, and is, nevertheless, of the two cities, most liable to submersion.

In ordinary seasons the quantity of rain which falls at Mexico, according to Humboldt, is nearly 5 feet in perpendicular depth. This enormous mass of fluid falls also in a short period of time, and before any other outlet existed, except the inadequate channel of the brook (arroyo) Fiquisquiac, the lower part of this elevated basin was liable to complete submersion.

The Aztec annals have noticed many instances of those destructive inundations, and some remains still are shown of very extensive works erected during the existence of the Aztec monarchy, to obviate their effects. One of the Aztec kings, Ahuitzotl, lost his life in attempting to escape from a flood of water, he had himself contributed to augment, by some injudicious embankments thrown up to prevent such a catastrophe.

Beside many of lesser magnitude, the Spanish historians mention 5 ruinous floods, which intervened in a little more than a century after the conquest of Mexico by Cortes. The first in 1553, under the viceroyalty of Don Louis de Velasco, the elder; the second in 1580, during the viceroyalty of Don Martin Enriquez de Alamanza; the third in 1604, under the viceroy Montescalros; the fourth in 1607, under the viceroy Don Louis Velasco the second; and fifthly, in 1629, whilst the Marquis de Cerralvo was viceroy.

The peculiar structure of the valley, and such alarming accidents, aroused the attention of the Spaniards, and as early as 1580, galleries or canals of evacuation were suggested, in order to carry the surplus floods through the gorges of the mountains near Nochistongo into the Tula; but no actual operation of that kind was effected until 1607, when the viceroy, the Marquis Salinas, employed an able engineer, Enrico Martinez, supposed to be a Dutchman, to make, in conjunction with some other mathematicians, an exact survey of the valley. This survey led to the commencement of the truly stupendous hydraulic work, the Desague (drain) of Huenuetoca.

Like all great national undertakings, the advance of the Desague was slow and interrupted. It was commenced on the 28th of November, 1607, by the hand of the viceroy, in the presence of the Audiencia. It was in the first instance

only a deep gallery upwards of 4 ms. in length, nearly 14 feet in depth, and 11½ feet wide. The water first entered it on the 17th of September, 1608, in less than 10 months from the original undertaking. Could we abstract our minds from the melancholy fact that this stupendous execution was effected by the forced labour of the Indians, we must admire a work, which even now, in the most populous nations, could not be considered other than extraordinary. Our admiration is enhanced also, by the additional labour performed in the same time, to carry the waters from the northern opening of the Desague to the Rio Tula. A dyke, upwards of 5 ms. in length, was cut to effect the latter object, and led the superabundant waters of the valley of Tenochtitlan towards the Gulf of Mexico.

A regular and detailed history of this singular work, is given by Humboldt in his description of the Intendancy of Mexico, and forms one of the most instructive parts of his Political Essay on New Spain. From this account we find that the Desague, though still unfinished, has eventuated in an enormous open cut (tajo abierto) through the mountains. "The Desague," says Humboldt, "in its actual state, is undoubtedly one of the most gigantic hydraulic operations ever executed by man (from 262 to 328 feet wide, and from 161 to 196 feet deep.) We look upon it with a species of admiration, particularly when we consider the nature of the ground, and the enormous length, breadth, and depth of the aperture. If this cut was filled with water 10 metres (32.8 English feet) the largest vessels of war could pass through the range of mountains which bound the plain of Mexico to the NE."

From its commencement within the valley to its discharge, (salto,) the Desague, is 67,535 feet (12.8 ms.) in length, and in one point 196 feet deep, with a mean width at top of about 320 feet. The head of the Desague, in the channel of the Rio Guatitlan, is 10½ varas, or 29½ feet above, and below the Salto del Rio, or discharge, it is 167½ varas, or 295 feet below the level of the lake of Tezcucuo; having an entire fall of 324½ feet. The expense at various periods, nearly \$6,000,000. Those who wish information more in detail than is in my power to give in this place, upon the topography of this remarkable region, will do well to read the third book of the Political Essay: the reading of this valuable document will explain the cause of the unnavigable nature of the Mexican rivers.

The Altamira, or northern branch of the river of Tampico, rises on the arid elevated plains of Zacatecas, and of San Louis Potosi, more than 2° of lat. N. of the valley of Tenochtitlan. Near the sources of the latter river, commences the North American desert. See *Couahuila y Texas Zacatecas*.

At the bar of Tamigua, 50 or 60 ms. SE. from the mouth of the Tampico river, commences a range of long sandy islands, which extend parallel to the continent as far as the mouth of the Trinity. The general range of the coast from the Guasacualco, to the Tampico, distant from each other upwards of 400 ms., is from SE. to NW.; but at the latter place turns to

nearly N., and maintains that direction, through nearly 7° of lat., or between 4 and 500 ms.

Having the parched surface of Zacatecas in the rear, the space of 250 ms. from the Tampico to Rio Grande, affords no rivers of any particular consequence. St. Ander, and San Fernando, are two mountain streams, which rise in Zacatecas and New Biscay, and flowing eastward carry comparatively little water into the Gulf of Mexico. The different structure of the two countries may be conceived from the fact, that those two rivers have as great length of course, as have most of those of the Atlantic slope of the U. S.; and yet the former hardly can be said to have mouths.

At N. lat. 25° 55' W. lon. W. C. 20° 30', the Rio Grande del Norte falls into the Gulf of Mexico. This is the first great river flowing from the Mexican interior provinces, into the Gulf of Mexico. The Rio Grande, according to most of our maps of that part of America, rises at N. lat. 41° 30', lon. 34° W. from W. C.; its mouth, as determined by Humboldt, is at N. lat. 25° 55', W. lon. of Paris 99° 51'; it flows through more than 15° of lat. and 13° 30' of lon., having a comparative course of upwards of 1400 ms. with a general course of nearly SE.

The extent of surface drained by this river, or the quantity of water it yields at its mouth, bears very inadequate proportion to its great length, which, on a comparative scale, would be only exceeded in N. America, by the Missouri and Lower Mississippi united, by the St. Lawrence, Saskatchewan, and Unjiga; it exceeds the length of both the Colorado and Columbia, though it is probable that either of the two latter streams carries to its respective recipient, more than ten times the mass of water discharged by Rio Grande. From its source N. lat. 41° 30', to the mouth of its first considerable branch, the Rio Conchos, from New Biscay, N. lat. 30° 20', or above 10° of lat. it flows in a very narrow valley, not averaging 100 ms. wide. Below the mouth of the Conchos, the river gradually turns to the E. and NE.; here the basin is the widest, being from NE. to SW. above 400 ms. Within this sweep, the largest tributary of the Rio Grande, the Rio Puerco, enters from the N., and some distance below its junction, the main stream again resumes its SE. course, which it pursues to its final discharge into the Gulf of Mexico. The Rio Grande, drains an area of about 150,000 sq. ms.

As we are now approaching the U. S., and as the phenomena of the climate of the regions watered by the Rio Grande, are necessary elements to determine many problems in the meteorological analysis of the seasons of the former, I here beg leave to quote the observations of Humboldt upon this river, and the country it drains.

"It is sufficiently remarkable," says that author, "to see that after the lapse of two centuries of colonization, the province of N. Mexico does not yet join the intendency of New Biscay. The two provinces are separated by a desert; this desert extends from the Passo del Norte, towards the town of Albuquerque, N. lat. 35° 40'. Before 1680, in which year there was a general revolt among the Indians of New

Mexico, this extent of uncultivated and uninhabited country, was much less considerable than it is now. There were then three villages, San Pascual, Semillette, and Socorro, which were situated between the marsh of Muerto, and the town of Santa Fe; Bishop Tamaron, perceived their ruins in 1760, and he found apricots growing wild in the fields, an indication of the former cultivation of the country.

"The desert of the Muerto, is a plain 30 leagues (near 90 ms.) in length, destitute of water. The whole of this country is, in general, of an alarming degree of aridity; for the mountains *de los Mansos*, situated to the E. of the road from Durango to Santa Fe, do not give rise to a single brook. Notwithstanding the mildness of the climate, and the progress of industry, a great part of this country, as well as old California, and several districts of New Biscay, and of the intendency of Guadalupe, will never admit of any considerable population.

"New Mexico, though under the same latitude with Syria, and Central Persia, has a remarkable cold climate. It freezes there in the middle of May. Near Santa Fe, and a little further N., under the parallel of the Morea, the Rio del Norte is sometimes covered, for a succession of several years, with ice thick enough to admit the passage of horses and carriages. We are ignorant of the elevation of the soil of the province of New Mexico; but I do not believe, that under the 37° of lat., the bed of the river is more than 7 or 800 metres, (2296 or 2624 feet) of elevation, above the elevation of the ocean. The mountains which bound the valley of the Rio del Norte, and even those, at the foot of which the village of Taos is situated, lose their snow towards the beginning of June.

"The great river of the North, rises in the Sierra Verd, which is the point of separation, between the streams which flow into the Gulf of Mexico, and those which flow into the South Sea. It has its periodical rises, like the Orinoco, the Mississippi, and a great number of rivers of both continents. The waters of the Rio del Norte begin to swell in the month of April, they are at their height in the beginning of May, and they fall towards the end of June. The inhabitants can only ford the river on horses of an extraordinary size, during the drought of summer, when the strength of the current is greatly diminished.

"The water of the Rio del Norte, like that of the Orinoco, and all the great rivers of S. America, is extremely muddy. In New Biscay they consider a small river called Rio Puerco, the mouth of which lies S. from the town of Albuquerque, near Valentia, as the cause of this phenomenon; but M. Tamaron observed that its waters were muddy far above Santa Fe, and the town of Taos. The inhabitants of the Passo del Norte, have preserved the recollection of a very extraordinary event which took place in 1752. The whole bed of the river became dry all of a sudden for more than 30 leagues above, and 20 below the Passo; and the water of the river precipitated itself into a newly formed chasm, and only made its reappearance near the Presidio de San Blas; and

this loss of the Rio del Norte remained for a considerable time. The fine plains which surround the Passo, and which are intersected with small canals of irrigation, remained without water, and the inhabitants dug wells in the sand, with which the bed of the river was filled. At length, after the lapse of several weeks, the water resumed its ancient course, no doubt because the chasm and subterraneous conductors were filled up.

The Rio Grande del Norte is the true American Nile, and except flowing in an opposite direction, the two rivers have very strong traits of resemblance.

In the angle between the Rio Grande and Red river, rises a series of streams flowing into the Gulf of Mexico. The first of these from the Rio Grande is the Rio Neuces, or Walnut river, rising in the plains of Texas, at N. lat. 31° W. lon. W. C. $23^{\circ} 30'$, flowing parallel to the Rio Grande 250 ms. it falls into the Laguna Madre, N. lat. $27^{\circ} 20'$, W. lon. W. C. 21° draining about 15,000 sqms.

The shore of the Gulf of Mexico, NE. from the Rio Grande, is as remarkable for the abundance, as is that S. from that stream for the scarcity of its rivers. The Neuces is followed by the united streams of the St. Marco and Guadalupe. It is probable from the phenomena of the rivers of these regions that the substrata are calcareous. The circumstance quoted from Humboldt, of the sinking of the waters of the Rio Grande, almost superinduces the supposition of a calcareous base. The St. Marks (San Marco) rises in the mountains of St. Saba, and is remarkable for the number of excessively large fountains, another almost unerring mark of a calcareous formation. It may seem incredible, but it is nevertheless true, that few parts of this continent are more imperfectly known than the angle between Rio Grande and Red river W. and NW. from the Sabine. The names of the rivers, as they follow in succession, were communicated to me by a number of persons who had travelled the country, and particularly by Mr. Davenport, who resided many years at Nacogdoches, and by a French gentleman of the name of Laforest, who also resided a considerable time in Texas. Neither the shores or interior have ever been surveyed, or even visited, by any scientific traveller. The sources and courses of the rivers are very imperfectly known; their mere relative names were all I could procure beyond the extent of my own sphere of observation, which was limited by the waters of the Sabine, which I intersected at N. lat. 32° , and surveyed from thence to its mouth.

It is well known, however, that the rivers from the Rio Grande to Missouri inclusive, have gained from the configuration of the intermediate country a very singular corresponding curve. These curves give to a map of the rivers of Texas, Arkansas, and Missouri, a regularity which appears artificial. It is from such a source that the Colorado of the Gulf of Mexico presents so singular an aspect. With a comparative length of 700 ms., the basin of the river does not exceed 60 ms. in mean width. The courses of most rivers make more or less approach to the form of an ellipse, and the dif-

ference between the greatest breadth seldom amounts to so great a disproportion as three to one; in the case of the Colorado the difference is double the ordinary scale of comparison.

That river rises at N. lat. 34° W. lon. W. C. 28° , and flowing south-east by east 500 ms., turns 150 to the south-east and about a similar distance to the S. falls into the Gulf of Mexico, at N. lat. 29° W. lon. W. C. $19^{\circ} 40'$. This stream has its regular spring and summer inundations similar to the Rio Grande, and about the same period. The parched and open nature of the country, from which they both flow, causes an excessive depression in the latter end of summer and in autumn. Indeed the overwhelming rains that sometimes deluge, and the long droughts which occasionally parch the interior of Texas, and which extend their effects into Lou., Ark., and Miss., are amongst the most singular phenomena of physical geography. Whilst I was in Lou. there intervened near 3 years, I believe, 1800, 1801, and 1802, without rain at St. Antonio de Behar, and over an immense extent of the interior regions. During the 2 first years of that series the Mississippi did not overflow its banks.

The basin of the Brassos a Dios, follows that of the Colorado, and partakes of a similar structure. The sources of the latter are, however, in the mountains of San Saba, upwards of 300 ms. E. of those of the former. The Brassos rises at N. lat. 33° W. lon. W. C. 25° , and flowing nearly parallel to the Colorado falls into the Gulf of Mexico after a comparative course of 400 ms., with also a very narrow basin of less than 50 ms. mean width.

The Trinity is the last river of Texas beyond the Sabine. These two streams rise in the same plain S. of Red river, at about N. lat. $32^{\circ} 30'$ and both flow nearly parallel to each other, with a general course to the S., curving to the eastward by a semi-elliptical sweep; each having a comparative course of about 300 ms.

We may turn and cast a cursory retrospective glance upon the rivers of Texas. I may observe that by the name of Texas, is designated all the country between Louisiana and New Mexico, and between the boundary of the U. S., the Rio Grande, and Gulf of Mexico.

Though the coast of Texas is amply indented with bays, many of which are of extent and depth to admit vessels of any draught, the rivers are extremely shallow, and, except during floods, unnavigable. No large falls, or even cataracts, are known to exist. The very slight tides in the Gulf of Mexico, give little aid to the commercial facilities in the confluent rivers.

Similar to the Atlantic coast, SW. from New York, that of the Gulf of Mexico is every where low, and either sandy or marshy. This gives a peculiar character to the rivers of both, which distinguish them from such as flow from a rocky or bold shore. Bars of sand or mud interrupt the navigation, more or less, of all the rivers of the world, but in a high degree those whose egress to their recipients are made through shores having but little declination above the water level.

Mexico is bounded by the Republic of Mexico, bounded by the Atlantic Ocean SW., by Mechoacan NW., and N. by Queretaro N., and by

Puebla de los Angeles E., length 220 ms., mean width 130, and area about 30,480 sq.ms. It extends from lat. $16^{\circ} 34'$ to $20^{\circ} 15'$ N. The state of Queretaro, has been recently formed out of the northern part of the late intendancy of Mexico. See *Queretaro*.

More than two thirds of the former intendancy of Mexico are mountainous, in which there are immense plains elevated from 6,560, to 7,550 feet above the level of the ocean. From Chalco, Queretaro, are almost uninterrupted plains of 150 ms. in length, and from 25 to 30 wide, on the low Pacific border the climate is sultry and unhealthy. Near the gigantic summits of Popocatepetl, and Fitzacihuatl, the highest peak of the state of Mexico, the Nevado de Toluca, is 15,156 feet above the level of the ocean. The particular valley of Mexico, or Tenochtitlan, surrounded by the mountains of Anahuac, is one of the most singular features of our globe. Its form is oval; length about 55 ms. and breadth 38; area about 1,700 sq.ms. of which one tenth is covered by water. Its circumference 200 ms. The surrounding Cordillera, or porphyritic rim has a mean height of 9,840 feet. In this extraordinary vale or basin are 5 lakes, near one of which the city of Mexico is situated. See, *article Mexico republic of Queretaro, and city of Mexico*.

From the outside of the basin the water flows in every direction towards the Atlantic and Pacific Oceans, but from the basin itself, only one outlet exists, carrying the water into the Tula or Moctezuma river. And what is peculiarly remarkable, this outlet is in a great degree artificial. For the rivers of this intendancy, and for those of the Mexican empire in general, which enter the Gulf of Mexico. See *Empire of Mexico*. The sources of the Rio Grande de Santiago rise on the western slopes of the mountains of Anahuac, and cannot be considered a stream of the intendancy of Mexico. The river of Xacatlutla rises near Cuernavaca, and drains the SW. part of the intendancy. It is a region which, though exposed to excessive annual rains, the rivers are few in number and comparatively small.

In a region of such difference of level, and such excessive difference of moisture the seasons must also offer almost every change of temperature. The high plains of Anahuac are as remarkable for the purity of the air, as are those of the Pacific coast, for their insalubrity. The two climates are clearly distinguished by the inhabitants. The cities of the elevated table land are called, *ciudades de tierra fria*, or cities of the cold region, whilst those near the coast, are designated, *ciudades de tierra caliente*, or cities of the hot region. Its most important mines are, La Veta Biscaino de Real del Monte, Zimopan, and Tehuillotepec.

The cities of the intendancy of Mexico, are Mexico, Tezcucuo, Cuyoacan, Tacubaya, Tucu-ba, Cuernavaca, Chilpanzinco, Tasco, Acapulco, Zacatlula, Lerma, Toluca, Pachuca, Caderieta, San Juan del Rio, and Queretaro.

Mexico, city of, capital of the intendancy of the same name, and of the whole republic, is situated at lat. $19^{\circ} 26'$ N. lon. W. C. $2^{\circ} 5'$ W., on or near the W. shore of the Lake Tez-

cucuo, and in the central part of the valley of Tenochtitlan, and also nearly mid-distance between Vera Cruz and Acapulco. The site of Mexico is elevated 7470 feet above the ocean level. The name of this city, and of the country is a subject of some doubtful speculation, there is good reason to believe the name, however, to be derived from Mezitli, or Huitzilopochtli, the Mexican god of war. The valley was called Tenochtitlan from Tenochques a national appellation of the Aztecs. It was founded according to the Aztec historians, in 1321, precisely two centuries before the Spanish conquest. The ancient city was divided into four quarters, Teopan or Xochimilco, Atzacualco, Moyotla, and Creepopan; and the old limits are preserved in St. Paul, St. Sebastian, St. John, and St. Mary. The present streets have for the most part the same direction with the old ones, running from N. to S., and from E. to W. But what gives the new city a peculiar and distinctive character, is, that it is situated entirely on the continent, between the extremities of the two Lakes of Tezcucuo, and Xochimilco, and that it only receives by navigable canals the fresh water of the Xochimilco. The ancient city was placed on an alluvial plain, or rather morass, which has been by the mere operations of nature in five centuries, raised to a considerable elevation, and the shores of the lakes restricted. The surface of Lake Tezcucuo is 7468 feet above the level of the ocean, and its waters are salt; Lake Xochimilco, is higher, and composed of fresh water. Before, and for more than a century after the Spanish conquest, no city of the world was so subject to destructive inundations as Mexico. This casualty has been diminished in its effects and occurrence by increased evaporation arising from the destruction of the adjacent forests, and more efficaciously by the great drain *Desague*. See *Republic of Mexico*, "Mexico is undoubtedly one of the finest cities ever built by Europeans in either hemisphere," says Humboldt, with the exception of Petersburg, Berlin, Philadelphia, and some quarters of Westminster, there does not exist a city of the same extent, which can be compared to the capital of New Spain, for the uniform level of the ground on which it stands, for the regularity and breadth of the streets, and the extent of the public places. The architecture is generally of a very pure style, and there are even edifices of very beautiful structure. The exterior of the houses is not loaded with ornaments. Two sorts of hewn stone, the porous amygdoloid, called tet-zoutli, and especially a porphyry of vitreous feldspath, without quartz, give to the Mexican buildings an air of solidity, and sometimes even magnificence. There are none of those wooden balconies, and galleries to be seen, which so much disfigure all other cities built by Europeans in both Indies. The balustrades and gates are all of Biscay iron, ornamented with bronze, and the houses instead of roofs, have terraces, like those in Italy, and other southern countries."

The edifice, destined to the school of mines for which the richest individuals of the country furnished a sum of more than three millions of francs, 554,112 dollars, would adorn the princi-

pal places, of Paris, or London. Two great palaces, or hotels, have been constructed by Mexican artists, pupils of the Academy of Fine Arts of the capital. One of these palaces in the Quarter della Traspansa, exhibits in the interior of the court a very beautiful oval peristyle of coupled columns. The traveller justly admires a vast circumference paved with porphyry flags, and enclosed with an iron railing, richly ornamented with bronze containing an equestrian statue of king Charles IV. placed on a pedestal of Mexican marble, in the midst of the Plazo Mayor of Mexico, opposite the cathedral and the Viceroy's palace. It is much less, however, from the grandeur and beauty of the monuments, than from the breadth and straightness of the streets; and much less from its edifices, than from its uniform regularity and from its extent and position that the city of Mexico attracts the admiration of Europeans. "From a singular coincidence of circumstances," says Humboldt, "I have seen successively, within a very short space of time, Lima, Mexico, Philadelphia, Washington, Paris, Rome, Naples, and the largest cities of Germany. By comparing together impressions which follow in rapid succession, we are enabled to rectify any opinion, which we may have too easily adopted. Notwithstanding such unavoidable comparisons, of which several, one would think, must have proved disadvantageous for the capital of Mexico, it has left in me a recollection of grandeur, which I principally attribute to the majestic character of its situation, and to the surrounding scenery.

In fact nothing can present a more rich and varied appearance than the valley, when, in a fine summer morning, the sky without a cloud, and of that deep azure, which is peculiar to the dry and rarified air of high mountains, we transport ourselves to the top of one of the towers of the cathedral of Mexico, or ascend the hill of Chapultepec. A beautiful vegetation surrounds this hill. Old cypress trunks of more than 49 to 52 feet in circumference raise their naked heads above those of the schinus, which resemble in their appearance, the weeping willows of the E. From the centre of this solitude, the summit of the porphyritic rock of Chapultepec, the eye sweeps over a vast plain of carefully cultivated fields, which extend to the very foot of the colossal mountains covered with eternal snow. The city appears as if washed by the waters of the lake Tezcucotlan, whose basin, surrounded with villages and amlets, brings to mind the most beautiful lakes of the mountains of Switzerland. Large avenues of elms and poplars, lead in every direction to the capital; and two aqueducts, constructed over arches of very great elevation, cross the plain, and exhibit an appearance equally agreeable and interesting. The magnificent convent of Nuestra Señora de Guadalupe appears joined to the mountains of Tepetaca, among ravines, which shelter a few dates, and young Yucca trees. Towards the S., the whole tract between St. Angel, Tacabaya, and Augustine de las Cuevas, appears an immense garden of orange, peach, apple, cherry, and European fruit trees. This beautiful scene forms a singular contrast with the

wild appearance of the naked mountains which enclose the valley, among which, the famous volcanoes of La Puebla, Popocatepetl, and Iztaccihuatl, are the most distinguished. The first of these forms an enormous cone, of which the crater, continually inflamed and throwing up smoke and ashes, opens in the midst of eternal snow.

The police of Mexico is good, the streets are wide, clean, and well lighted. The city is supplied with fresh water from two sources, one on Chapultepec hill, and the other near the mountain which separates the valley of Tenochtitlan from that of Iztapa, and Toluca. To convey this water, two great aqueducts have been constructed. The water of Chapultepec, enters the city at the Salto del Agua, by an aqueduct of 10,836 feet; and that of Santa Fe, is brought along Alameda, and terminates near la Traspansa, at the bridge de la Maresca, by an aqueduct of 33,464 feet, or upwards of 6 and one-third ms. The latter stream is most pure. What is very remarkable, the ancient city was supplied in the same manner, and by aqueducts not less massive or lengthy, than those erected by the Spaniards.

In its actual state Mexico is no doubt considerably the most extensive, and best populated city of either America. Its existing population, is, however, difficult to fix with any precision, but must from all concurrent testimony exceed 180,000.

Mexico, Gulf of. inland sea of North America; having the Mexican provinces SE., SW., and NW., the U. S. N., and NE., and Cuba E. It extends from lat. 18° to 31° 20' N., and from lon. W. C. 4° to 21° W. From the mouth of the Alvarado, to that of the Apalachicola, in a NE. and SW. direction upwards of 1000 ms., its mean width from SE. to NW. about 600 ms., superficial area exceeding 600,000 sqms. The Gulf of Mexico is connected with the Caribbean sea by the channel of Cuba, and with the Atlantic Ocean by the Florida stream. The current generated by the trade winds, and by the rotation of the earth on its axis, is carried into the Mexican Gulf by the Cuba Channel, and discharged by the Florida stream; the Gulf being an immense reservoir.

It is about 310 ms. in length, including the straits of Michilimackinack. Its width varies from 20 to 70 ms. The area covered by this lake amounts to about 15,000 sqms. Green bay is connected with it to the NW. and lake Huron NE. It is navigable for vessels drawing 12 feet water, through the straits of Michilimackinack, and within the body of the lake for those of the largest class.

Michigan Territory.—This expanse is composed of two parts naturally divided or separated. The first is formed by the peninsula between the lakes Erie, Huron, and Michigan; the second from the immense former NW. territory between the river Mississippi, N. lat. 49° , the river Rain, the lakes Superior, Huron, Michigan, and the northern limits of the state of Illinois, on N. lat. $42^{\circ} 30'$.

The second part is merely annexed to the first for temporary purposes of civil government.

It is about 650 ms. from the NE. angle of the state of Illinois, to the NW. angle of Michigan territory on Red river. Its breadth is very irregular, but averages about 200 ms.

Of this immense region, much remains unknown; and of those parts which have been explored, our information is generally imperfect. The peninsular section, though much more correctly delineated on our maps than the more remote, and more inaccessible parts to the NW. remains still extremely defective in its representation. It may seem strange, but it is nevertheless a fact, that I was myself the first to publish the names and positions of several of the most important rivers in the very environs of the city of Detroit.

In general description, little will suffice on the whole of this region. It is less variegated than any section of the U. S. of equal extent. The surface is in a great measure flat, or gently rolling or waving. The peninsula contains some prairie, but is in much the greater part covered with a dense forest. On the trans-peninsular division, the prairies are more expansive, and the forests, where they do occur, composed of more humble and less numerous specific material. The soil of the peninsula is, perhaps, in proportion to extent, equal, if not superior, to any equal continuous area in the U. S., the state of Illinois excepted.

In point of climate, it must be obvious that very sensible extremes must be felt in a country stretching over $6\frac{1}{2}^{\circ}$ of lat.; but these extremes are very little affected in Michigan by inequality of surface. On some maps, mountains are drawn near the sources of Ouisconsin and Fox rivers, where no such elevations exist. The country is there hilly, but by no means mountainous, and towards either the lakes or Mississippi river, becomes comparatively level. It is needless, however, to amplify on objects of remote importance, and concerning which our information is at once vague, and of doubtful authority; we will, therefore, confine our observations respecting Michigan more particularly to the part contained in the peninsula.

I may merely observe, that this point of land is generally level in its interior, with a sloping border towards the circumscribing lakes and river. Its superstructure is in every respect analogous to the northern parts of Ohio and Indiana. A prolongation of the table land mentioned in my general view of those states, passes through Michigan, and reaches to the straits of Michilimackinack. This plain is no doubt underlaid with the same secondary base, reaching from Ohio river, and a similar superstratum is found in Michigan, which spreads over the schist of Ohio, Indiana, and Illinois.

Almost all the rivers of Michigan are precipitated over ridges of either limestone or sandstone rocks, a few miles before joining their respective recipients. Above these falls, the country gradually becomes flat and marshy; below it is dry, sloping, and very productive. In one respect, the features of Michigan very essentially differ from those of Ohio and Indiana. In the two latter sections, the mouths of the confluents of Ohio river, surrounded by

hills, whose true character I have drawn; whilst in the former, the approach to the discharge of its streams is made down a very gradual and but little broken plain. In one instance, the original inclined plain was gradually cut into ravines by the Ohio, and other streams; in the second instance, the original plain was simply refracted, by the formation of a sloping border, whose inclination was greater than the interior and remaining fragment of the primitive level.

It has been seen that Lake Michigan was only elevated above the Atlantic tides about 600 feet. From any data yet procured, no part of the peninsula can be elevated above that lake 200 feet, or 800 feet above the ocean.

The straits of St. Mary, uniting Lake Huron with Lake Superior, has but little current, except at the rapid of St. Mary, a distance of 2 or 3 ms. Fifty feet is as much as can be allowed for all the depression from Lake Superior to Huron, giving to the former an elevation above the Atlantic tides of 650 feet.

It will at once be seen from the elements given, that a Canadian sea is a species of valley, reaching far into the interior of the continent, with an elevation, at its utmost extremity, not so great by 150 feet as the ground on which stands the city of Pittsburg.

I mention these striking facts in this place, as they present, in a striking manner, the peculiar structure of the widely extended connexion between the two great basins of Mississippi and St. Lawrence; and in order to introduce some brief observations on a phenomenon which has excited considerable surprise and observation. It has been found, that in receding from the central parts of New York, and even Pennsylvania, that though advancing into a higher lat., when proceeding to the margins of Lakes Erie and Ontario, that the seasons became more mild. The quantum of the change, as in all similar cases, has been, no doubt, very much exaggerated; but that such an effect is actually perceptible, admits of no serious doubt. The cause remains to be explained. We have already repeatedly adverted to the elevated region which protrudes from New York and Pennsylvania, into Ohio, and which gradually depresses, advancing SW., until it finally subsides into a level table land, in the NW. part of Ohio, and NE. part of Indiana. In the region skirting the southeastern side of Lake Erie, we have found the summit level of the ridge in question about 1200 feet in height, whilst that of Lake Erie was not half so much.

Pittsburgh is upwards of 200 feet above Detroit, and about on a level with the table land of Michigan. It ought not, therefore, to excite surprise, that places elevated from 500 to 800 feet above others, should be more exposed to the action of frost.

The peach tree flourishes on the S. shore of Ontario, whilst it languishes a degree of latitude more southwardly for the very reasons I have assigned. In 1818, in September, I travelled from Buffalo to Albany, and found indications of approaching winter, in proportion to my recession from the level shores of Erie, and entrance on the hilly and broken tracts contained in Seneca, Cayuga, Onondago, Cortland, Madison, Chenango, Otsego, Schoharie, and

Green cities. In my previous route from Buffalo to Detroit, the contrary aspect was very visible, though at a less advanced season. The time of harvest is more than a week earlier at Detroit, than at Buffalo, though the difference of lat. is only about 30'. In the central and elevated parts of N. York, due E. from Detroit, the seasons differ in length near a month. Not as has been supposed, from relative E. and W. position, but from relative height, and proximity to water.

It may not be irrelevant to observe, that causes remote and doubtful, ought never to be resorted to, when those near and obvious, will satisfactorily account for the phenomena under examination. The effects of the trade winds have been by Volney, and some others, stated to exist far beyond their possible actual sphere of influence. It demands but a very limited knowledge of the physical and chemical properties of air, to enable the mind to conceive, that every thing else equal, the cold mass of atmospheric air in the higher parts of the Mississippi basin, was more liable from its superior weight, to extend its effects towards the lower parts of the basin, than for the heated and buoyant mass at that lower part to not only resist, but actually force a heavier body to recede to the higher and superior section.

The extent of the cities of Michigan, is too vague to admit any relative estimate. The inhabited parts of this territory are, a strip along the southeastern side of the peninsula, extending from the mouth of the Maumee, to the discharge of St. Clair river, from Lake Huron about 140 ms., and reaching inland about 30 ms.; with an area 4200 sqms., and with 7125 inhabitants, not quite an average of 13 to the sqm. At an interval of 250 ms., we find 819 inhabitants at and around Michilimackinack; and 150 ms. still further, 952 in Brown city, embracing the region adjacent to Green Bay, and Fox river. The whole inhabited and cultivated extent of the Mich. territory, may be estimated at about 5000 sqms.

The progressive population of this fine, and naturally-favoured country, has been, from various causes, extremely slow, but is now, since the completion of the N. Y. canal, rapidly increasing. It is within the range of reasonable anticipation, that the completion of the N. Y. western canal, will produce a flood of emigration to Michigan, and to the NW. part of the state of Ohio. It is hardly within the powers of imagination, to conceive a place better adapted for inland commerce, than is the city of De-

troit; nor a finer country for all the purposes of agriculture suitable to its climate, than is the peninsula of Michigan.

Detroit stands at lat. 42° 25' N., and lon. W. C. 5° 50' W. The site is a gently sloping bank, rising 50 or 40 feet, into the centre of the city, and thence spreading into an extensive plain in its rear. The town is yet small, but has an active and prosperous aspect. It contained in 1820, 1422 inhabitants.

Michilimackinaw, straits and island of, between Lakes Michigan and Huron. The straits extend about 40 ms. in length, but with very unequal breadth. A gentle current sets through it from Michigan into Huron, which at the narrows near the island where the strait is restricted to about 4 ms. width, is most sensibly felt. The island is about 7 ms. in circumference. See *Michilimackinaw* city.

Michilimackinaw, city. Mich. Territory, embracing the foregoing island, and adjacent shores. The principal settlement is on the island, which contains a court-house, jail, and about 100 houses. The island rises to some considerable height in many places, one of which hills is elevated 300 feet above the level of the lake. The name of this island is said to be derived from Michi, Mackinaw, or Great Turtle, from its form. The town is, during summer, a place of very considerable resort, being a complete thoroughfare between the lower and higher parts of the Canadian sea. It has a regular custom-house, and is a port of entry.

Milan, city of Italy, capital of the duchy of the same name, and the see of an archbishop. It was the ancient capital of Lombardy, and also of the late kingdom of Italy, Napoleon Bonaparte being here crowned king of Italy, on May 26, 1805. The city is 10 ms. in circumference; but the garden grounds are so extensive, that it does not contain above 140,000 inhabitants. It stands in a delightful plain, between the rivers Adda and Tesin, which communicate with the city, by means of two canals. The town itself has no other fortifications than a high wall and ramparts; but the citadel, called *Castello di Porta Zobbia*, is a place of great strength. Here are 22 gates, a university, several colleges, many fine palaces, 230 churches, of which 96 are parochial, 90 convents, 100 religious fraternities, and a great number of hospitals. The cathedral is in the centre of the city, and next to St. Peters at Rome, is the most considerable in Italy. This vast fabric is built of white marble, supported by 50 columns, and adorned within and without by a prodigious number of marble statues; and its treasury is reckoned the richest in Italy next to that of Loreto. The college of St. Ambrose has a library, which, beside a prodigious number of manuscripts, contains 60,000 printed books; and its superb gallery is adorned with rich paintings. Milan has considerable commerce in grain, especially rice, with cattle and cheese; and has manufactures of silk and velvet stuffs, stockings, handkerchiefs, ribbons, gold and silver lace, and embroideries, woollen and linen cloths, glass, porcelain, and curious works in steel, crystal, agate, hyacinth, and other gems. It has been many times taken in the wars that have desolated Italy. It is now the seat of an Austrian Viceroy, and capital of the Lombardo-Venetian kingdom, or Austrian Italy. It is 165 ms. NW. of Florence. Lon. $9^{\circ} 12'$ E. lat. $45^{\circ} 28'$ N.

Milan, or the *Milanese*, late duchy and considerable country of Italy, included in the late Italian republic. It was bounded on the N. by Switzerland, and the country of the Grisons; on the E. by the republic of Venice, and the duchies of Parma and Mantua; on the S. by the duchy of Parma, and the territory of Genoa, and on the W. by Piedmont and Montferrat; being 150 ms. in length, and 78 in breadth. The soil is every where fertile in corn, wine, fruits, rice, and olives; and there are also plenty of cattle. The rivers are the Secchia, Tesin, Adda, and Oglio. There are likewise several lakes, the three principal of which are Maggiore, Como, Lugano. It is a peculiarly fertile and productive region, and cultivated with the utmost skill and care. It is now divided between Austria and Sardinia. Austrian Milan contains about 8000 sqms. and 2,000,000 of inhabitants. Sardinian Milanese extends over 3300 sqms. and is peopled by 35,000 inhabitants.

Mississauga River, of U. C. runs into Lake Huron, between le Serpent and Thessalon River, on the N. shore.

Mississauga Point, of U. C., in the tp. of New-ark, lies on the W. side of the entrance of the river Niagara, and opposite the fortress of Niagara.

Mississauga Island, U. C., lies opposite the mouth of the Trent, and about the same distance from the portage at the head of the bay of Quinte.

Missiscoui, or *Mississaki*, river rising in Canada, enters Vermont in Franklin city, whence it flows nearly in a western course to Michiscou or Missiscou bay, a branch of lake Champlain.

Mississippi River. From their magnitude and importance of this great stream, the following comprehensive view is taken, not alone of its constituents properly so called, but also, those in the vicinity of its delta, which enter the Gulf of Mexico in the U. S.

The most south-western stream of the U. S. is that of the Sabine. This river has its source in the province of Texas, N. lat. $32^{\circ} 30'$. It flows in a general course nearly S. but curves to the eastward about mid-distance between its source and mouth. At N. lat. 30° , it expands into a large lake, of 30 ms. in length, and from 10 to 8 wide; which at its lower extremity, again contracts into a river and discharges into the Gulf of Mexico, at N. lat. $29^{\circ} 28'$, W. lon. from W. C. $15^{\circ} 45'$.

The Sabine affords no navigation of consequence, having only 3 feet water on the bar at its mouth; the Sabine lake is also shallow, not having more than 4 or 5.

The Calcasieu is the next stream E. of the Sabine. The former rises in the angle between the latter and Red river; flows nearly S. about 120 ms. and falls into the Gulf of Mexico, 50° E. of the mouth of the Sabine. The Calcasieu, similar to the Sabine, expands into a lake, and again contracts into a river channel, before its final discharge. The former is also similar to the latter in its navigation being impeded by a bar, and by the shallowness of its large lake. The mouth of the Calcasieu river is at N. lat. $29^{\circ} 20'$.

Following the coast of the Gulf of Mexico, comes the discharge of the Calcasieu, and the entrance of the Mermentau. This area is formed by a number of branches, having their sources in the prairies of Opelousas. The general course of the Mermentau is from N. to W. about 100 ms. It is remarkable for being similar in nature to the Calcasieu and Sabine rivers, and similar also in a defective navigation, being from 4 to 6 at the entrance, and by the shallowness of its large lake, neither affording more than 3 or 4 feet water.

An interval near 60 ms. stretches E. of the mouth of the Mermentau to that of the Vermilion, a fine but small stream, rising in Ope-

lousas, but flowing through Attacapas into the Gulf of Mexico, after an entire course of about 80 ms. The lands along the Vermilion river are of the first quality, producing cotton, and towards the mouth some plantations of sugarcane have been successfully attempted; but vessels drawing more than 5 feet water cannot enter. The Vermilion enters the Gulf of Mexico at N. lat. $29^{\circ} 45'$.

The united streams of Atchafalaya, Teche, and Courtableau, form a river of much greater importance and magnitude than any other in the U. S. W. of the Mississippi.

The Atchafalaya is the upper mouth of the Mississippi, and leaves the latter at N. lat. 31° , and W. lon. from W. C. $14^{\circ} 47'$, by a stream 110 yards wide; its course is a little E. of S., and by its windings 48 ms. to where it receives the Courtableau from the NW. Below the Courtableau, the Atchafalaya flows 80 ms., and is again augmented by the Teche, also from the NW. After receiving the Teche the Atchafalaya flows 20 ms., where it is lost in a large bay, known by the same name. The Atchafalaya bay is about 23 ms. long, and 13 wide, and is enclosed on the SW. by two long narrow points of land, Point Chevreuil, and Point au Fer. Between those two points extends a bar, over which there is 9 feet water, and within the bay and river sufficient depth to permit the passage of any vessel to the mouth of the Teche, which can pass the bar. The mouth of Atchafalaya is at N. lat. $29^{\circ} 21'$, W. lon. from W. C. $14^{\circ} 22'$.

The Teche rises in Opelousas, and flowing 30 ms., enters Attacapas, where it receives a creek from the W., and assumes the form of a river. After entering Attacapas, the Teche continues, by a very winding course of 80 ms., a little E. of S., to New Iberia, N. lat. $30^{\circ} 2'$. The town of New Iberia stands upon the right bank of the Teche, at the head of schooner or sloop navigation. Vessels, however, drawing 5 feet water, can ascend to this place at all seasons. The Teche, below New Iberia, gradually widens from about 30 to 100 yards, and deepens from 5 to 30 or 40 feet. Its stream now turns ESE. and continues 90 ms., where it unites its waters with the Atchafalaya.

The Teche is small, but very singular and important stream. In all its length, of about 130 ms. it drains one of the most fertile tracts in the U. S. On its upper waters cotton, and towards its mouth sugar and molasses, are the staples produced for market.

New Iberia is a port of entry, and vessels are frequently cleared out from that place, but the general commercial communication with the city of New Orleans, through the Atchafalaya, Plaquemine, and Mississippi, or by the lakes Palourde and Veret, and the Lafourche and Mississippi rivers.

The Plaquemine is an outlet of the Mississippi, 117 ms. above New Orleans. It is only during the seasons of flood that water is discharged into the Plaquemine, which, after a very circuitous course of 15 ms., joins the Atchafalaya. Through the Plaquemine is, however, transported most of the merchandise for the supply of the very flourishing settlements of Attacapas and Opelousas; and by this route

is also sent to market the valuable staples of those places.

Boats from 15 or 20, to 50 or 60 tons, ascend from New Orleans, and entering the Plaquemine, pass into the Atchafalaya. Those destined to the lower parts of Attacapas descend the latter river, and enter by the mouth of Teechie. Those bound to the central part of Attacapas ascend the Atchafalaya about 20 ms., and thence, by an outlet and Lake Chetima-ches, proceed to the Pause Point landing. Here is a portage of 10 or 12 ms. to St. Marlinville, the chief town of Attacapas. Another outlet and a chain of small lakes and bayous (creeks,) enable vessels to be conveyed to the upper part of Attacapas, and the lower part of Opelousas. Vessels destined for the higher and central parts of Opelousas, ascend the Atchafalaya to the mouth of Courtableau, and thence up the latter river to Lemell's landing, 6 ms., or into Bayou Carron, within 4 ms. from St. Landré, seat of justice and chief town of Opelousas.

The Courtableau is a fine little river, formed by the united streams of Crocodile and Bœuf. The two latter creeks unite at N. lat. $30^{\circ} 34'$. The general course of the Courtableau is SE., about 30 ms. in length. It affords, during high water, part of a very eligible channel of communication between the settlements of Opelousas, and the lower part of Rapides, with the banks of the Mississippi.

The navigation of the Atchafalaya is entirely obstructed by rafts of timber, above the mouth of the Courtableau. These extraordinary masses of trees commence 26 ms. below the efflux of the Atchafalaya from the Mississippi, and extend by intervals to within 5 ms. of its junction with the Courtableau.

Advancing along the Gulf of Mexico, eastward from the mouth of Atchafalaya, the Lafourche is the first inlet of consequence, in a commercial point of view. In the intermediate distance of 60 ms., several small creeks enter the Gulf, but from their very abridged length of course are unimportant.

The Lafourche, (the Fork,) as its name imports, is an outlet of the Mississippi, and the second from the right in descending from the Atchafalaya, the Plaquemine being the first. The outlet of the Lafourche is at N. lat $30^{\circ} 6'$ W. lon. from W. C. $14^{\circ} 1'$. After leaving the Mississippi, the general course of the Lafourche is SE. by S. 90 ms. It enters the Gulf of Mexico at N. lat. $28^{\circ} 57'$, W. lon. from W. C. $13^{\circ} 30'$.

The Lafourche is one of the most important inlets of Louisiana, having 9 feet water on its bar, and admitting vessels drawing 4 or 5 feet to within 30 ms. of its efflux. An arable border of extremely productive soil, skirts both banks of the Lafourche for 60 or 70 ms. from the Mississippi. Cotton and sugar are the principal staples. Most of the produce and merchandise of the settlements along its banks, are transported by the Mississippi, to and from New Orleans.

Between the mouth of the Lafourche and that of the Mississippi, several inlets admit a boat navigation to New Orleans. The principal of these bays is that of Barataria, by which,

and a number of lakes and interlocking streams a direct communication exists from the Gulf of Mexico to the Mississippi at New Orleans.

The Mississippi itself has 3 main and 3 lesser passes or outlets. The most frequented of which is that of the SE., upon the bar of which there are 12 feet water at low tides. Next to that of the SE. that of the SW. is the best entrance. The latter has indeed as great a depth of water as the former. Upon the South Pass there are 8 feet water. These three are the chief outlets of this great stream. The West, North, and pass à la Loutre, have from 5 to 8 feet water on their respective bars.

Between New Orleans and Mobile bay, a very interesting inland navigation exists, through Lake Pontchartrain, the Rigolets, Lake Borgne, Pass au Christian, and Pass au Heron. This channel is formed by a chain of islands, the low marshy expanse NE. of the Mississippi river, and the main shore of Lou. and Miss. Vessels above 5 feet draught cannot make this passage, as over either the shoals of the Pass au Christian, or Heron, that is the ordinary depth.

This interior channel is continued to the NW. of New Orleans, by Lake Pontchartrain, Pass au Manchac, Lake Maurepas, Amite river, and Bayou Iberville, to the Mississippi, river, 125 ms., by water, above that city. Schooners drawing 5 feet water, go up as far as Galveztown, at the confluence of Bayou Iberville and Amite rivers. From the efflux of the Iberville to the Pass of Heron is about 200 ms., 80 of which are to the NW., and 120 to the NE. by E. of New Orleans. Into this extensive channel are discharged, exclusive of the Amite and Mobile rivers, the Tickfaha, into Lake Maurepas; the Tangipao and Chifuncte, into Lake Pontchartrain; Pearl river into the Rigolets; and the Pascagoula, opposite Horn island. Each of these minor streams afford less or more facilities to navigation, but do not admit vessels of more than 5 feet draught, but a very short distance from the sea. Schooners are most commonly used in the commerce of these inlets and shallow rivers. A steamboat plies, however between New Orleans, and Mobile and Blakley.

Mobile bay is a fine sheet of water, of 30 ms. in length, with a mean width of 11 ms. Dauphin island, and Mobile point, land-lock Mobile bay. The main entrance, with 18 feet of water, lies between the island and point. Pass au Heron, with 5 feet, lies between Dauphin island and the main shore of Alabama. A bar, with only 10 feet of water, crosses Mobile bay, about 5 ms. below the town of Mobile.

Above Mobile town the bay gradually ceases, and is succeeded by a low sunken tract of 30 ms. in length, and from 3 to 5 ms. wide. Through this occasionally inundated tract, beside many minor streams, meanders the Mobile and Tensaw rivers; the former being the continuation of the Tombigbee, and the latter of the Alabama river. Vessels drawing five feet water are taken as high in the Tombigbee as Fort St. Stephens, and in the Alabama to Fort Claiborne. At each of those two latter places, shoals impede the farther navigation of the rivers respectively, with vessels propelled by sails, though boats ascend and descend, in the

Tombigbee, to Cotton Gin port, and in the Alabama, to its head at the junction of Coosa and Tallapoosa.

East of Mobile, Pensacola is the first harbour of any consequence. The Perdido intervenes, but having but little water, and terminating in a barren uninteresting country, merits no particular notice. Pensacola, to its depth of water, is one of the finest havens of the world. Its entrance is at N. lat. $30^{\circ} 23'$, W. lon. from W. C. $10^{\circ} 20'$. The entrance between Rose island and Carancas point is over a bar having 22 feet water, upon a fine sandy bottom. The bay is about 20 ms. in length, with a mean width of about 3 ms. The anchorage is, in every part, a soft mud or sand. No rocky banks or dangerous shoals environ this noble sheet of water. The bay, above the town of Pensacola, is divided into two arms; one, stretching N. receives the Escambia, and the other, to the NE. the Yellow Water river.

The basin of the Appalachicola is remarkable as forming the connecting link between the waters which flow into the Gulf of Mexico, from those which enter the Atlantic Ocean. The Appalachicola is formed by two streams, the Chatahochee and Flint rivers. The former rises in the Appalachian mountains, at N. lat. 35° , interlocking with the sources of Tennessee, Oakmulgee, Oconee, and Savannah rivers, and flowing SW. by S. through 2° of lat., turns thence nearly due S., to N. lat. $30^{\circ} 45'$, where it receives the Flint. The latter, an inferior stream to the former, has its sources in the angle between the Oakmulgee and Chatahochee rivers, at N. lat. $33^{\circ} 40'$, and flowing SW. by S., 200 ms., unites with the Chatahochee, and forms the Appalachicola.

This latter fine river flows a little W. of S. to N. lat. $29^{\circ} 50'$, having an entire course of about 70 ms., its mouth is into St. George's sound.

The basin of the Appalachicola affords an inland navigable expanse of 400 ms. in length, with a mean width of 150, and having an area of about 20,000 sqms. Though interrupted by some falls, and many shoals, the rivers of Chatahochee and Flint are navigable almost to their sources; and schooners of considerable size ascend the Appalachicola to its head.

Cotton, tobacco, grain, tar and lumber, are the common staples of this basin.

In all the immense distance from Pensacola to the bay of Espiritu Santo, except the mouth of the Appalachicola, there is no inlet of any commercial consequence in a general view.

The fine bay of Espiritu Santo is situated upon the W. coast of the peninsula of East Florida, at N. lat. $27^{\circ} 40'$, W. lon. from W. C. $6^{\circ} 20'$. There is about 2 feet more water on the bar of Espiritu Santo than upon that of Pensacola, but the country round the latter remains so imperfectly known, that its commercial value cannot be estimated with any certainty at present.

Having followed in regular order the minor streams flowing into the Gulf of Mexico, we now turn to a review of the basin of the Mississippi.

This great stream, forming a river of the first order, demands particular notice in an element-

ary work. Under the general term Mississippi, we include not only that river properly so called, but every secondary or confluent body of water which enters into, or contributes to augment the mass of the main recipient.

Following this plan, the basin of the Mississippi may be naturally divided into four grand sections; first, advancing from E. to W., the valley of Ohio and its tributary waters; that of Mississippi and its branches; that of Missouri and its branches; and that of the lower Mississippi, below the mouth of Missouri. Of these sections in order.

Ohio valley.—This very important region embraces about 200,000 sqms. of area, equal to 128,000,000 of U. S. acres. Its greatest length is from the NE. sources of the Alleghany river to the head of Bear creek, a branch of Tennessee river, 750 ms. Its greatest breadth, from the sources of the French Broad, to those of the Wabash river, 500 ms. In point of climate, it extends from N. lat. 34° to $42^{\circ} 30'$, or through 7° of lat., affording a very considerable difference of seasons and temperature.

It has been long the opinion of the author of this article, an opinion formed from the fruits of many years' observation, that the Ohio basin once formed an immense inclined plane; and that the beds of all the rivers have been formed by abrasion of water. This theory is supported by Mr. A. Bourne, author of a large and valuable map of the state of Ohio. The following is a quotation from a manuscript letter from that gentleman on the subject. "The hills are generally found near the rivers or large creeks, and parallel to them on each side, having between them the alluvial valley, through which the stream meanders, usually near the middle, but sometimes washes the foot of either hill alternately. Perhaps the best idea of the topography of this state may be obtained, by conceiving the state to be one vast elevated plain, near the centre of which the streams rise, and in their course wearing down a bed or valley, whose depth is in proportion to their size, or the density of the earth over which they flow. So that our hills, with some few exceptions, are nothing more or less than cliffs or banks made by the action of the streams; and although these cliffs or banks, on the rivers and larger creeks approach the size of mountains, yet their tops are generally level, being the remains of the ancient plain. In the eastern part of the state, some few hills are found in sharp ridges similar to those in the eastern states. The base of the hills is generally composed of limestone, free, or sandstone, slate, and gravel, admixed mineral coal, ochre, &c."—Bourne.

The author of this article surveyed, in 1815, Pittsburgh and its environs, and found the rocks there, as in every other part of the Ohio valley, perfectly parallel to the horizon, of course, speaking technically, floetz formation. The circumstance most conclusive of the fact, that the hills and valleys of this region were formed by abrasion, is the uniformity of elevation and similar material of corresponding strata on the opposing banks of the streams; phenomena every where visible, where the nature of the country will admit accurate observation. The coal strata near Pittsburgh are in every place

ound about 340 feet above low water level in the rivers of that vicinity.

Embracing the whole Ohio valley in one perspective, it is found divided into two very unequal portions by that river, leaving 120,000 qms. to the SE., and 80,000 on the NW. The Ohio, forming a common recipient for the water of the minor streams of both slopes, flows in a very deep ravine, S. 64° W., 478 geographical, or 548 ms., in a direct line from Pittsburgh to the junction of this river with the Mississippi. The entire length of Ohio by its meanders, is by actual admeasurement 948 ms.

The peculiar features of this river, and its immediate banks, have led to most of the gross misrepresentations respecting the valley in general. The low water surface of the Monongahela at Brownsville, has been found to amount to 850 feet above high tide in the Chesapeake bay. Estimating the fall in the Monongahela to be 20 feet from the borough of Brownsville to the city of Pittsburgh, would produce 830 feet as the elevation of the latter place above the Atlantic Ocean. The apex of the hills in the vicinity of Pittsburgh, are within a small fraction of 460 above the low water level of the Monongahela, Alleghany, and Ohio rivers. By these elements we have 460 added to 830, or 1290 feet as the extreme elevation of the hills near Pittsburgh, above the Atlantic tides. We may, therefore, if the correctness of our previous theory is admitted, suppose that the latter elevation was that of this part of the original plain from which the valley has been formed. This elevation evidently declined towards the now mouth of the Ohio, leaving a descent for the waters.

The actual elevation of the present surface of the country, adjacent to the great central junction of the Mississippi with its confluent, is not determined with the same precision with that of Pittsburgh; but, from the length of the Mississippi below the mouth of Ohio, a near approximation may be obtained. From the mouth of Ohio to that of the Mississippi, the distance is within a small fraction of 1100 ms., which, at 3 inches to the mile, yields 3850 inches, 320.8 feet, as the entire depression of the Mississippi river from the mouth of Ohio to the Gulf of Mexico.

The fall in the Ohio river exceeds that of the Mississippi, and has been estimated at about 5 inches to the mile, consequently, if we multiply 948 ms., the entire length of Ohio, by 5, we have 4740 inches, or 395 feet, as the amount of descent in that stream; and adding 395 to 320.8 feet, we find 715.8 feet, as the declivity of the waters from the confluence of the Monongahela and Alleghany rivers, at the city of Pittsburgh, to the Gulf of Mexico.

A very remarkable difference is perceptible between the different elevations of Pittsburgh above the Chesapeake bay and Gulf of Mexico, amounting to more than 125 feet, in favour of the former sheet of water. This apparent phenomenon is explicable on the simplest laws of hydrostatics. The Gulf stream flows from the Gulf of Mexico towards that part of the Atlantic Ocean adjacent to the Chesapeake bay, demonstrating that a difference of level must exist between the extremes, sufficiently great to admit a current of considerable velocity. That velo-

city has never been very accurately determined; but, if we allow only 1½ inches per mile, would yield in 900 ms., 11¼ feet. That the actual fall from Florida channel to the mouth of Chesapeake bay, considerably exceeds 100 feet, there can be no rational doubt, when the necessary geographical phenomena are duly examined.

We may, from the data given, consider the valley of Ohio composed of an inclined plane, chequered by the deep channels of the rivers, hills, and extensive flats, the whole resting upon a base of secondary formation. In many parts of this interesting region, as in the state of Kent., the beds of the rivers are vast chasms, rather than valleys, in the true acceptance of the latter term. The two opposing slopes exhibit some very curious contrasts. Though considerably most extensive, the southeastern slope has no extensive remains of the ancient plain; the northwestern slope, on the contrary, contains immense remains of the former plain. The rivers, which enter the main recipient from the former, rising in or near the northwestern ridge of the Appalachian mountains, are precipitated from their sources, flowing, as already observed, in very deep chagnels; whilst those streams which enter from the northwestern slope, rise out of a level continuous plain, in many places morass, as in part of the states of Ohio and Indiana. The latter rivers are sluggish towards their sources, gaining velocity in their advance towards the Ohio river.

The secondary rivers of the southeastern slope are, the Monongahela, Little Kenhawa, Great Kenhawa, Sandy, Mooking, Kentucky, Greene, Cumberland, and Tennessee. Those flowing from the northwestern slope are, the Alleghany, Beaver, Muskingum, Hockhocking, Sciota, Miami, and Wabash. Of these streams, the Alleghany rises in Penn., flows into N. Y., and winding from NW. to W. and SW., again enters Penn., forming the northwestern, or rather northern constituent of Ohio. No branch of the Alleghany flows from the high table land; the region it waters is in some parts mountainous, and every where hilly; the sources of the Alleghany flow, however, from the highest point of the valley of Ohio. Advancing westward from the region watered by the Alleghany, the sources of the Beaver exhibit the commencement of the great central plain, which separates the two great basins of the Mississippi and St. Lawrence. This plain stretches westward, and widening in extent through the states of Ohio, Indiana, and Illinois, reaches the Mississippi river. In its natural state, the valley of Ohio was, in the greatest part of its extent, covered by a dense forest, but the central plain presented a very remarkable exception. As far E. as the sources of Muskingum, commenced open savannas, covered with grass, and devoid of timber. Similar to the plain itself, those savannas extended to the westward, and on the waters of the river opened into immense natural meadows, generally known under the denomination of prairies.

We have dwelt with more minuteness on this central plain than we would otherwise have done, from a conviction that it is a phenomenon highly illustrative of the peculiar structure

of that part of North America. It has been shown in this article, that the surface of Ohio, at the city of Pittsburgh, was 830 feet above the nearest tide water of the Atlantic Ocean, and 715.8 feet above the surface of the Gulf of Mexico. Lake Erie has been found by actual admeasurement, 565 feet above the tide water of the Hudson at Albany; consequently, the Ohio at Pittsburgh is 265 feet above the surface of Lake Erie; the intermediate distance, in a direct line, 103 ms. Therefore if a channel was opened from the Ohio river at Pittsburgh to Lake Erie, as deep as the bottom of the river, and sloping towards the lake by gradual descent to its surface, the waters of Alleghany and Monongahela would, in place of flowing down Ohio, rush into Lake Erie with the enormous velocity arising from a fall of 265 feet in 103 ms., or upwards of $2\frac{1}{2}$ feet per mile. When these mathematically established facts are contrasted with the circumstance, that the extreme north-western waters of Alleghany, those of Lake Chataughque, rise within 3 ms. of Lake Erie, the singular but real construction of the country becomes apparent. Nothing but actual measurement could render credible, that Pittsburgh, situated at the confluence of two streams, each of which, following their meanders, have flown, above 200 ms., and one of which, (Alleghany,) having part of its sources so near the very margin of Lake Erie, and yet, that the city of Pittsburgh should be elevated 265 feet above the surface of the lake.

But by far the most remarkable feature of the Ohio valley is, that its real slope does not correspond to the courses of its rivers. It is a fact not well known, that loaded boats at high water can pass from Lake Michigan into Illinois river, and vice versa. We have seen that Lake Erie was 565 feet above the level of the Atlantic tides. The elevation of Lake Michigan above Lake Erie, cannot, from the shortness and gentle currents of Detroit river, St. Clair river, and straits of Michilimackinac, exceed 35 feet. We may, therefore, assume 600 feet as the level of Lake Michigan. This would correspond very nearly with that of the Ohio river, between the mouths of Miami and Kentucky rivers. Illinois river, we will see, presents much more the aspect of a canal than that of a river, whilst the central table land we have reviewed, is so elevated, as to produce water courses, whose descent is rapid, and those flowing into Lake Erie all precipitated over falls before reaching their recipient. During the continuance of spring flood, loaded boats of large tonnage may be navigated from the rapids of Ohio, by that river, the Mississippi and Illinois rivers, and through the Canadian sea to the cataract of Niagara, without meeting a single rapid; whilst the direct line between the extremes of this navigation, would pass over an elevated ridge. When due attention is paid to the real phenomena of the connected basins of Mississippi and St. Lawrence, the true causes of the apparent anomalies we have noticed are developed. It is once rendered apparent, that the true slope of the Ohio valley is nearly at right angles to the range of the Appalachian mountains, and that its lowest line of depression is the span of the Illinois and Mississippi rivers.

Soil, climate, and productions.—The soil of this interesting section of the earth, is by no means so uniform as is generally supposed, though, taken as a whole, it may be considered fertile. The alluvial bottoms of the streams, great and small, are generally a deep loam, exuberantly productive. This rich vegetable earth, in many places reaches the apex of the highest hills. Those hills present, however, great variety of soil; always clothed with timber, though often precipitous, rocky, and sterile. The extreme southeastern part, from the sources of Alleghany to the most southern part of the valley in the state of Alabama, presents a mountainous, or very broken, hilly tract of country, upwards of 700 ms. in length, with a mean width of about 100. The soil is on this region extremely varied, and as it contains at its extremities nearly the greatest contrast of lat. of the valley of which it forms a part, the vegetable productions, natural and artificial, are here also most varied. There are few timber trees known on this continent between N. lat. 34° and 42° , but which are here found. The most prominent and valuable species of which are 10 or 12 species of oak, hemlock, pine, the liriodendron tulipifera, five or six species of hickory and walnut, three species of maple, one of which, the acer saccharinum, is amongst the most singular and valuable trees known on this globe; three or four species of ash, with an immense variety of useful trees and shrubs not enumerated. The flora is also highly varied and elegant. Medical plants abound. Spring water is abundant and excellent.

Of naturalized plants, trees, and shrubs, the number and variety preclude a complete specification. Extending through 8° of lat. and presenting considerable difference of level, the climates admit the cultivation of plants whose powers of resisting the inclemencies, or of profiting by the changes of seasons, are very different. The cereal graminæ—wheat, rye, oats, barley, and Indian corn, or maize, is every where cultivated. Meadow grasses flourish best in an advance to the N. In the southern part, even where extensive settlements have been made, meadows are rare, but towards the northward, form a large part of rural economy. This observation, though in a more limited extent may be applied to orchards, and even gardens, where the crops become very valuable, horticulture is every where neglected, as are orchards, except in the vicinity of cities or large towns. In the region before us, below N. lat. 36° – 30° , cotton commences to be cultivated as a valuable crop. Some culture of this vegetable, extends N. of the assumed limit, but rather for domestic use than as an article of commerce. The quantity and quality of this vegetable is enhanced, soil and exposure being equal, in a very near ratio, with advance to the S. As we will have more occasion to dilate on this vegetable in the sequel of this article, it would be irrelevant to touch farther on the subject in this place.

The orchard trees generally cultivated in the region before us, are the apple, pear, peach, plum, nectarine, &c.

The mineral treasures of this region, compose a large share of its most valuable produc-

tions. Iron, salt, and mineral coal, are the most valuable and abundant. Iron ore is found in almost every section of this extensive line. The immense masses of mineral coal are very extensive; those near Pittsburgh are only the most abundant and best known. It is amongst the most remarkable features in the natural history of the U. States, that from Onondago in the state of N. York, to the S.W. angle of Virginia, the earth appears in every place, at a certain depth, to afford water saturated with *muriate of soda*, (common salt.) This indispensable mineral is found where, if wanting, it could not be obtained without very great expense. Salt is now made at Onondago in N. York, Conemaugh in Pennsylvania, and on the Kenhawa and other places in Virginia;—all in the same range.

The Ohio river bounds the tract we have reviewed, as far southward as the mouth of the Great Sandy. Here the former turns almost at right angles, and pursuing a course something N. of W. to the mouth of the Great Miami, again infects about S.W. by W. to its junction with the Mississippi. This wide curve, in conjunction with a part of the Mississippi, bounds the great limestone expanse of Kentucky, and W. Tennessee. This latter region, though adjoining the former, presents features essentially different. The base of the Kentucky section, appears to be in great part, flint or secondary limestone; the face of the earth becomes more monotonous; the rivers flow in many places in chasms, walled on both banks by precipices of limestone. Fresh water, in many places scarce. Minerals rare, if limestone is excepted. In point of climate and vegetable production, no very material difference appears between the contiguous parts of the two sections under review, except that which arises from soil. In respect to extent and fertility, the soil of Kentucky and W. Tennessee, is generally productive, and in a variety of places, highly fertile. Vegetables, either indigenous or exotic, are very nearly similar, on both sections, on the same line of latitude, and of equal exposure and elevation. From a lower surface, cotton, and other tender vegetables, are cultivated farther N., near the Ohio, than towards the north-western ridges of the Appalachian mountains. The climate of both will be more amply noticed in the sequel of this article.

Respecting the northwestern section of the Ohio valley, a few observations will suffice, after what has preceded respecting that of the SE., and on the review of the whole valley in general. Similar latitudes present, in great part, similar climate, phenomena, and vegetable products. From the peculiar structure of the northwestern section already delineated, it must be evident, that mineral products are rare, and such is the fact. Iron ore is found, though not abundantly, in the NW. part of Pennsylvania, and NE. part of Ohio. Mineral coal abounds along the Ohio, and on some other streams, as far down the valley as Cincinnati, and might, it is probable, be obtained in other places, if the earth were perforated to sufficient depth. Indications of *muriate of soda*, and some trifling fragments of sulphate of lime, (gypsum,) have been discovered, but neither to any con-

siderable extent. In the far greater part, however, of this section of the Ohio valley, few or no indications of minerals appear. The flatness and peculiar structure of two-thirds of the states of Ohio, Indiana, and Illinois, preclude the exposure of mineral bodies, if such existed. It has been by the action of water in wearing deep channels in the earth's surface, that mineral bodies have in most cases, been exposed to human view and use.

In point of soil, climate, and vegetable production, the southwestern section of the Ohio valley has been too highly coloured, though favourable in many respects to human residence. The range of country within 100 ms. of the Ohio river, being broken into hill and dale, good wholesome water is abundant, and exceeding the central table land, is in many places warmer. In most essential circumstances, as respects natural phenomena and human economy, strong analogies exist between the contiguous parts of the two great sections of Ohio valley, whilst their extremes present a total contrast. It would be mere repetition to state further, after what has been given on this subject; the foregoing observation was made in order to draw the reader's attention to features so strongly traced, and illustrative of the subject on which we are treating. It has been too generally prevalent with authors, as well as travellers, to represent the Ohio valley as a monotonous surface, uniform in aspect, climate, and fertility, whilst, in all these respects, perhaps no equal region of the earth presents, in all these points, more marked or more abrupt contrasts, if some very mountainous tracts are excepted.

Valley of the Mississippi Proper.—Before entering upon the physical survey of the particular valley of the Mississippi, above its junction with Missouri, it is necessary to take a view of the entire stream which now designates the whole basin.

In our defective state of information, it is impracticable to determine which is the most remote branch of the Mississippi, nor is it perhaps an object of much consequence. The latitude and longitude of its source are also undefined. Authorities on that subject differ so much, that no great confidence is due to any. It is probable, that like other rivers, no real certainty of the main source or latitude is attainable, without extraordinary pains and skill. We may, however, assume N. lat. 48°, and W. lon. W. C. 18°, as the source of that great river. Its general course is about SW. 300 ms. to the mouth of the Corbeau, which comes in from the right. Below the Corbeau, the Mississippi assumes a southeastern course, 60 ms. to St. Anthony's falls, at the foot of which it receives the St. Peter's, a large tributary stream from the NW. Below the falls, the St. Peter's, the Mississippi continues 100 ms., and in that distance, receives from the St. Croix, Chippewa, and Millelac. Between the two latter occurs a bend to the S., and 80 ms. below the former, the Black river, the Mississippi continues to the S., and 80 ms. below the latter, it receives from the left a large branch, the Osage, whence again turning to SE. 100 ms. is joined by the

river, a stream of considerable size, flowing from NE. to SW., and rising near Lake Michigan. Below Rock river, the Mississippi turns to a little W. of S. 100 ms. to its junction with the Lemoine river, a very considerable tributary stream from the NW. One hundred and twenty miles in a southeastern course, below the Lemoine, the Illinois unites with the Mississippi, and 15 ms. lower, the latter and Missouri form their junction. The entire length of the Mississippi above the mouth of Missouri, is by comparative estimate 995 ms. The country drained by this river, is generally, rather level than hilly, much of its surface prairie. Except towards its source, no lakes of any considerable consequence are found on any of its confluent. Its waters are tolerably limpid, and its current gentle. Though, from accidental circumstances, the Mississippi has gained the pre-eminence in giving name to the general recipient, it is nevertheless, a mere branch, and by no means the principal one, of Missouri. Below their junction, the united stream flows 198 ms. SE., where it receives an immense accession of water through the channel of Ohio; below which, the congregated mass turns a little W. of S., and flows in that direction 316 ms., receives the White river, and 14 ms. lower the Arkansas, both from the right. The Yazoo enters from the left, 187 ms. below the mouth of Arkansas; and 211 ms. below the mouth of Yazoo, the Mississippi receives its last tributary stream of consequence, the Red river, from the right. Two ms. below Red river, the Atchafalaya flows out to the S. From the mouth of Arkansas, to the efflux of Atchafalaya, the general course of the Mississippi is nearly from N. to S. Below the former, the latter assumes a southeast course, which it pursues 347 ms. to its final exit into the Gulf of Mexico. The entire length of the Mississippi, below the mouth of Missouri, is 1273 miles, by the windings of the stream. If one-third is added to its comparative length above Missouri, for its particular meanders, the result will give 1327 ms., which added to 1273, yields 2600 ms. as the entire length of the Mississippi, following the bends.

Like all rivers of great length, the Mississippi is subject to an annual rise and fall. The periods of these floods are tolerably regular, but the quantity and elevation of the water differs continually, and often to many feet in two succeeding seasons. The river commences its swell generally in March, or the beginning of April. The increase of water, at first rapid, gradually becomes more slow, until the supply beginning to exhaust, the volume commences its fall or decrease, which at Natchez, is in a long series of years, from the 19th to the 20th of June, and at New Orleans, in the first week in July. There is, however, in most years, a lesser and earlier flood, which varies in time, much more than that of the spring and summer. In October, November, or December, this lesser flood intervenes, generally in the last days of December, and first of January. This lesser flood seldom rises so high as to overflow the banks, and it has been observed, when the earlier flood is more than 100 ms. high, the later flood is in proportion,

lower than common. The efflux of Plaquemine, is the common scale in the Delta, of the excess and period of both floods.

The velocity of the current of the Mississippi, has been greatly mistaken. Taking the motion of its swells, the only safe criterion, it is found that, below Ohio, the entire mass does not move as much as one mile per hour. The line of upper current moves more rapidly than the mass, but even the former does not move by any means with the rapidity usually supposed.

The depth of water in the Mississippi varies of course with the increase and decrease of its floods, but this difference of elevation is more perceptible above, than in the delta. At Natchez, it is from 30 to 40 feet, at Lafourche about 23 feet, and at New Orleans about 9 feet. There is usually about 12 feet water on the bars of the Northeast and Southwest Passes. In the South and West Passes 9 feet, and in those of the North and Pass à la Louche 8 feet. Above the passes, the river deepens to upwards of 100 feet. At New Orleans, it is upwards of 120, and at the Lafourche, 153 feet at high water. There is no place below the mouth of Ohio, where the channel is ever less than 12 feet in depth.

Valley of the Mississippi Proper; above the mouth of the Missouri.—In point of area, the valley of the Mississippi proper, is not so extensive as that of Ohio, the former only extending over a surface of 184,000 sqms. Its greatest length is from the sources of the Mississippi river, to the junction of that stream with the Missouri 650 ms., and its greatest breadth, from the sources of the Ouabosin to those of Lemoine river, 350 ms.

Before proceeding farther, however, with the descriptive geographical detail, it may not be considered irrelevant, to review one of those great natural features of North America; without attention to which, no correct conception of its peculiar topography can be obtained. This feature is the great natural meadows known by the name of Prairie. In a state of nature, with but very partial exceptions, a dense forest covered all those parts of the continent of North America contained in the Atlantic slope of the lower part of the basin of St. Lawrence, below the head of Lake Erie, and two-thirds of that basin to its extreme northwestern point; N. of the St. Lawrence basin to the 55° of N. lat.; four-fifths of the valley of Ohio; the residue of the continent E. of the Mississippi river, to the Gulf of Mexico; and W. of that stream from 50 to 100 ms. This enormous forest, one of the largest on the globe, remains yet 19 parts in 20; the efforts of man having made but partial inroads on either its mass or extent. This great forest is bounded on its western limit by another region of much greater area, but with a very different character. The second may be strictly called the grassy section of the continent of North America, which from all that is correctly known, stretches from the forest region indefinitely westward, and from the Gulf of Mexico, to the farthest Arctic limits of the continent. The two regions are not divided by a determinate limit. In passing from one to the other, the features respect-

ively are so blended, that the change is in most places imperceptible; though in some instances extremely abrupt.

In general, the prairie region is less hilly, mountainous, or rocky, than that of the forest; but exceptions in both cases are frequent. Plains of great extent exist in the latter, and mountains of no trifling elevation and mass chequer the former section. We are now to approach the survey of regions, in which prairie forms no small part of the entire surface, and will in the sequel reach others, where those seas of grass extend over almost the whole superficies.

The extreme northern source of the Mississippi, strange as it may appear, continues unknown. In McSh's map, it is laid down at Turtle lake, $47^{\circ} 45'$ N. lat. whilst in Schoolcraft's map, lately published, the sources of that great river are extended to the Lakes, Labelish and Turtle, both extending above N. lat. 49° & discrepancy between these two authorities of course exists of $1^{\circ} 14'$ of lat. The nature of the country, indeed, renders precision on this point difficult, without extreme expence of labour and time. We will assume N. lat. 48° as the source of this great river; its junction with Missouri being at N. lat. $38^{\circ} 56'$, it flows consequently through 9° of lat., within a trifling fraction. The length of the Mississippi above the mouth of the Missouri, is still less accurately known than the position of its source; every authority differing from each other on the former subject. That nearly all estimates of its length are overrated, there are many weighty reasons to believe. Compared with the Ohio, on most maps, no essential difference appears, when the Alleghany is added to the latter. The actual length of the Ohio, by its meanders, we have shown to be 948 ms., that of the Alleghany is about 250, the two distances united amount to 1198, say 1200 ms. For a long period, the Ohio itself was estimated at 1180; more correct information corrected the error. On all maps, and from every information we have seen the sinuosities of the Ohio are at least as great as that of the Mississippi; we may, therefore, without much risk of material error, give 1327 ms. as the maximum length of the latter stream.

The confluent rivers of the Mississippi, advancing from its source along its right bank, are, Leech Lake, River, Vermilion, Pine river, Riviere de Corbeau, Elk, Sac, and Crow rivers; these enter above the Falls of St. Anthony; below that point are, St. Peter's, Upper Iowa, Turkey, Little Maquaque, Otter, Great, Maquaque, Lower Iowa, Lemone, and a few other streams of little note between the mouth of Lemone, and that of Missouri. From the left the Mississippi receives advancing from its source, Thornberry river, Round Lake river, Turtle, Portage River, Chevreuil, Prairie, Trout, Sandy Lake river, St. Francis, and Hum rivers. These streams enter above the falls of St. Anthony. Below that point are, St. Croix, Chipeway, Black Prairie, Leveque, Quiscouin, Sisnawa, Riviere, and River, Rock, Handerson's, and the Illinois. These streams are given, in most part, from the authority of Mr. Schoolcraft, and are also more minutely detailed, from

the circumstances that the valley of the Mississippi proper is yet imperfectly known, of great importance in the geography of the U. S., and that the source of intelligence is recent and respectable.

Mr. Schoolcraft estimates the elevation of the sources of the Mississippi at 1330 feet above the Atlantic. From comparison with our calculations respecting the descent of the Ohio, a very remarkable coincidence appears, though founded upon totally independent data.

The valley of the Mississippi, though contiguous to that of Ohio, exhibits an aspect essentially different. The sources of the latter we have found issuing from an elevated, mountainous, hilly, and broken country; those of the former, on the contrary, flow from an immense marshy plain, in great part devoid of timber. The humble elevation of the region from which the sources of the Mississippi are drawn, accounts for the adjacent country remaining in its primitive state, and fully corroborates the correctness of the theory assumed respecting the valley of Ohio.

One of the first observations which strikes the mind on a survey of this extensive tract, is its general monotony. No chains of mountains of note, or even lofty hills, rise to vary the perspective. Some elevations there are towards the sources of the largest confluent, and a few solitary hills, dignified, for want of contrast, by the title of mountains. The Mississippi is traversed by several falls, such as those of Pe-cagama, about midway between Sandy and Winnipeg lakes, at N. lat. $47^{\circ} 30'$; the Little Falls, at N. lat. 45° ; the Big Falls, below the mouth of the Sac river, and those of St. Anthony, at N. lat. 44° , immediately above the mouth of St. Peter's river. The view of extensive prairies, when first seen, has an awful and imposing effect on the mind, but that impression is soon lost, and a dreary void, obtrudes in its place. Many parts of the Mississippi banks are high, broken, and precipitous; but taken as a whole, this great valley presents few objects upon which those can dwell with interest who pass from the rich ever-varying scenery of Ohio, particularly that of its banks and southeastern slope.

Had the head waters of the Mississippi descended from a mountainous, or even a very high table land, similar to that from which flows the Ohio, with a slope of sufficient inclination, the general face of the country, drained by the former river, would have now assumed an aspect similar to that from which flow the head waters of the latter. But in reality though on a much larger scale, the Mississippi resembles those of the NW. slope of the Ohio valley. In the circumstance of flowing from a flat table land, and in gaining ascent and depth of channel in their progress towards their respective recipients. It is a feature peculiar to the Mississippi, that the country adjoining its source and that near its final discharge are in so great a degree similar in their general physiognomy. A difference of lat. of 10° or 12° presents much resemblance in vegetable nature and animal productions. Henceforth we follow Schoolcraft, who traced its sources in the month of July; the migratory water fowl found there at

that time of the year, are very nearly specifically the same found at its mouth in the months of December, January, February, and March. "It is also deserving of remark," says that writer, "that its sources lie in a region of almost continual winter, while it enters the ocean under the lat. of perpetual verdure."

Climate, Soil, and Production.—Extending through 9° of lat., the change of climate in the valley of the Mississippi proper, is greater than found in any other valley in the basin of which it forms a part, except the more northern parts of that of Missouri. So defective is our information respecting the larger tributaries which enter the Mississippi above Missouri, that little more need be added respecting the Mississippi valley in general. Suffice to say, that in point of soil, vegetable and mineral productions, lead excepted, this valley is in every respect inferior to that of Ohio. The ordinary timber in similar latitudes are nearly the same in both valleys, but towards the sources of the Mississippi, pine, spruce, cedar, maple, and white birch are the prevalent timber trees. In fact, the far greater part of the upper, and much of the lower part of the valley is composed of prairie, low swamp, or lakes. Much good alluvial land, particularly on the Illinois, borders the streams, but in no moderate proportion to what is found in the valley of Ohio.

In the lower part of the Mississippi valley the exotic vegetables cultivated are, in most part, the same found in our middle states generally. The climate being rather more severe in a given latitude, in the Mississippi basin than on the SE. side of the Appalachian mountains, some small difference of vegetable location may exist, but not to any very great amount.

Towards the sources of the Mississippi, the wild rice (*Zizania aquatica*) abounds in the swamp, and along the low margins of the rivers and lakes, and constitutes no small part of the food of the natives. Perhaps in an advanced state of society, this species of cerealia, which can be cultivated in places unsuitable to any other vegetable, may become the resource of civilized man, and under skilful culture attain a development similar to what has taken place with other grains, such as wheat, rye, oats, barley, and maize. In fine, in the valley of the Mississippi, we find every object denoting our approach to the wide spreading waste on which we are now to enter.

Valley of Missouri, above its junction with the Mississippi.—The Mississippi having been first discovered, has by prescription given name to the whole basin; but the Missouri, above their junction, is a stream which has drained a country of more than 24 times the extent of the valley of the former. The error is now without remedy; therefore, though of so much greater magnitude, it must, in a geographical point of view, be considered as a tributary stream to the Mississippi.

Missouri river rises in the Chippewas, or, as they are absurdly called, Rocky Mountains. What is by pre-eminence called Missouri, is not the main stream, it is one map, and even tolerably correct. The Yellow Stone river is longer than Missouri above their junction, and receives larger and longer tributary streams. Assuming,

however, Jefferson's river as the extreme source of Missouri, the latter will rise at N. lat. 44° 20' W. lon. from W. City 35°. The general course for about 120 ms. is NE., receiving in that distance several tributary streams. It thence turns N. 120 ms. and about N. lat. 46° 20', is augmented by Dearborne's river from the NW. It thence curves to the NE. 80 ms., to the entrance of Marias river from the NW. Below is junction with the Marias river, the Missouri pursues an eastern course, 120 ms. and thence a northeasterly course of 150 ms. to the mouth of Yellow Stone river. Estimating the distance from its source by either branch, along the streams the Missouri has flowed, at its junction with Yellow Stone river, more than 1000 ms., and has drained above 150,000 sqms. of surface, mostly prairie. Its volume is here, perhaps, as wide and deep as at its junction with the Mississippi. After receiving the Yellow Stone, the Missouri curves first NE., and thence SE., 200 ms., to the Mandan villages, at N. lat. 47° 25'. Between the mouth of Yellow Stone river and the Mandan villages, the volume of Missouri has gained its extreme, bent at N. lat. 48° 20', and has, besides many lesser tributaries, received the Little Missouri from the right, flowing from SW. to NE. Nearly opposite to the mouth of the latter, the Moose river branch of Assiniboin rises within less than one mile from the bank of the Missouri. At the Mandan villages, the Missouri turns directly S., and flows in that course through 4° 20' of lat., or near 300 ms. In this distance it has received a few unimportant tributaries from the left, and from the right the large streams of Cannon Ball, Wetahook, Sawareama, Chayenne, Teton, and White rivers. Below the mouth of the latter, the Missouri turns to the SE., E., and S., 300 ms., to its junction with the La Platte, an immense body of water flowing from the W. and heading with the Arkansas, Lewis's, and Yellow Stone rivers. In the latter course, the Missouri has also received from the left the Jacques, and Great and Little Sioux rivers. Below its junction with the Platte, the Missouri flows 200 ms. SE. to the mouth of the Kansas river, a large tributary flowing from the W., and heading between the Arkansas and Platte rivers. The Missouri has now gained nearly the 39° of N. lat. and turning to a little S. of E. 250 ms., joins its vast volume to that of the Mississippi, after an entire comparative course of 1870 ms., and particular course of about 3000 ms. Between the mouths of the Kansas and Mississippi rivers, the Osage, a large branch, enters Missouri from the SW. The Osage is a considerable stream, rising in the angle between the Kansas, White, and Arkansas rivers.

Our geographical knowledge of the various branches of Missouri, is still more limited than respecting the Mississippi. Of the main stream, as high as the Mandan villages, our notions are tolerably ample. Lewis and Clarke, Standard, Brackenridge, Bradbury, and others, have enlarged the public stock of information on this interesting topic, but with all that has been published, a large part has been thrown upon those immense regions.

The greatest length of the basin of Missouri is from the mouth of that stream to the head of

Marais river, 1200 ms., its greatest breadth from the sources of the Platte to a few ms. SE. of the Mandan villages, 700 ms. The outline is too vaguely known to admit precision, as to the area of this vast extent; it must, however, equal not exceed 500,000 sqms., equal to 320,000,000 U. S. acres.

General Features.—Embracing the whole valley of Missouri in one view, two remarkable features must command pre-eminence; the forbidding muddy appearance of the water, and the very great difference in length and volume of the confluent streams from the right bank, when compared with those from the left bank of the main recipient. Whilst from the right, the Missouri receives such vast branches as the Yellow Stone, Chayenne, Quiccourse, Platte, Kansas, and Osage; from the left, all the branches are of minor importance. This characteristic continues to distinguish the valley of the lower Mississippi below the mouth of Ohio; where, to the great volumes of the White, Arkansas, and Red rivers, are opposed the very inferior streams of the Yazoo, Big Black, and Homochitto.

It would appear that the Mississippi basin is divided into two immense inclined planes, falling from the two opposing chains of mountains, that of the Chippewan, and the Appalachian; and that the two planes are in a very near ratio to the respective magnitude and elevation of the chains from which they decline. The line of contact between those planes is formed by the Illinois, and thence by the Mississippi, below the mouth of the former; and if we extend our views beyond the Mississippi basin, Lake Michigan is evidently the continuation of this line of depression to the N.; whilst to the SE., the rivers entering the Gulf of Mexico, as far as the Appalachicola inclusive, belong to the Appalachian plane; and to the SW., all streams flowing into the Gulf of Mexico, as far as the Rio Grande del Norte, or even to the Sumasina, appertain to the plane of Chippewan.

But to return to our particular subject, that of the Missouri valley. It would be useless to give a list of the smaller rivers of this tract, the names of which are hardly known. A general outline is all that ought to be attempted. The Missouri valley is bounded on the W. by the enormous chain of the Chippewan or Rocky mountains from which flow the sources of the Missouri and most of its largest branches. The exact elevation of the Chippewan, or indeed any of its peaks within the domain of the U. S., have never been determined, and the result made public. The general table land upon which those ridges rest, must, from the great length of the Missouri, exceed 3000 feet; perhaps about 3000 feet would be a safe estimate for the general elevation of the whole chain, particular peaks excepted.

The Chippewan partakes with the adjacent country the character of nakedness, timber being rare and of stunted growth. Like the Appalachian, and most other American mountains, the Chippewan is formed in collateral ridges, with deep intervening valleys. The rivers rise in these valleys and placidly flow down their course. The sources of Missouri are found along the chain through near 44° of lat., or

upwards of 500 ms. In this region the main stream and most of its tributaries flow to NE. The sources of Big Horn, a branch of the Yellow Stone river rise at N. lat. 41° 30', whilst Marias river has its most northern source above N. lat. 48° 30'. Some of the northern confluent of Missouri probably lie as far as N. lat. 50°.

Missouri leaves the Chippewan by falling over continued ledges of rocks, in a distance of 18 ms.; after which, this overwhelming mass of water is augmented every few ms. by large tributary waters, without falls or even shoals to its mouth. The channel is deep, and bounded by enormous precipices of rock. The immediate margin of the streams only excepted, this almost interminable expanse is prairie, devoid of timber; and except the deserts of Arabia, no part of the earth presents an equal surface, less inviting to civilized man, than the far greater part of the valley of Missouri. Its asperities become more apparent as information respecting its real features expand. The general character of this extensive valley may be completed in few words; that, with some very partial exceptions, it is a wide and arid waste in summer, and over which, in winter, the piercing winds of the N. sweep without impediment, and on which a dense civilized population can never exist.

Climate, Soil, and Productions.—In so wide an extent a very great diversity of climate must necessarily exist. From the considerable elevation of some parts, northern position of others, and the open exposure of nearly the whole extent, the winters are extremely severe. The whole of the valley, a small part of the south-eastern extremity excepted, has an aspect and climate with a striking resemblance to the steppes of central Asia; and like those steppes, must forever be thinly peopled.

With the exception of the alluvial banks of the streams, the soil is, as far as correct information has been obtained, dry, and sterile, which, added to the want of timber, and in many places of great extent, water, settlement of an agricultural people is rendered not only difficult but impossible.

The state of Missouri, embracing about 63,000 sqms., it is probable, if the advantages of climate are superadded to soil, possesses one-fourth part of the productive surface of this entire valley.

Of the indigenous vegetables of the Missouri valley little can be said. Mr. Bradbury was the only naturalist of sufficient skill to investigate the subject of its botany, who ever reached the interior of the valley, as far as the Mandan villages, and his opportunities of observation were so limited as to preclude extensive research.

It is probable that the mineral treasures of this extensive valley, may in some measure compensate for its many other disadvantages. Of the quantity of iron ore and minerals now laid open to the developing the banks of Missouri, Mr. Bradbury expresses himself in enthusiasm. So small a part has been examined, and so hastily, even by Mr. Bradbury, that no conclusive deductions can be made on any branch of the natural history of the valley of Missouri at present.

Valley of the Mississippi, below the mouth of the Missouri.—We now approach what may be strictly designated as the tropical region of the U. S., though the entire surface of the section under review is not included under that government. The common recipient, the Mississippi, has been noticed under the head of that river in general, we may therefore observe, that the section under review extends in its greatest length from the mouth of the Mississippi, to the sources of the Arkansas, 1400 ms.: the greatest width of the valley is, from the junction of the Mississippi and Missouri to the mouth of the Atchafalaya, 600 ms. The area of no section of the Mississippi basin can be determined with more difficulty than that under review. The sources and length of the two most considerable confluent remain uncertain to a very serious extent. In this article we have assumed 330,000 sqms., equal to 211,000-200 acres.

In respect to climate, the lower valley of the Mississippi extends from N. lat. 29° , that of the mouth of the Mississippi, to N. lat. 42° , the sources of the Arkansas river; or through 13° of lat., with a difference of elevation from the level of the Gulf of Mexico, to at least 5000 feet. These extremes, when due allowance is made for the difference of elevation, amount to 28° of lat.

The principal confluent of this valley which enter the main recipient from the right; are, commencing below the mouth of Missouri, Merimack, St. Francis, White, Arkansas, and Red rivers; those from the left are, commencing below the mouth of Ohio, Kaskampa, Redfoot, Obian, Chickasaw, Forked Deer, Yazoo, Big Black, Homochitto, and Buffalo rivers.

Features.—The lower valley of the Mississippi is the most diversified section of the U. S. Every variety of landscape, every trait of natural physiognomy, and an exhaustless source of metallic and vegetable production is here found. This expanse is limited on the E. by a dense forest, and on the W. by the lofty but naked spines of the Chippewan mountains.

After receding about 100 ms. from the banks of the Mississippi to the W., and in many places a less distance, prairies commence, which, gradually encroaching on the forests, finally spread one wide waste of grass, as on the higher branches of the general basin. The open plains of Arkansas and Red rivers, are merely a continuation of those of the valley of Missouri, and with similar features. Those immeasurable plains of grass seem destined to be, in all future, as they have been in all former ages, the empire of ruminant animals, such as the buffalo, deer, wild goat, or antelope, and wild sheep. Following this apparent law of nature, if these prairies should ever become the residence of civilized inhabitants—those inhabitants must be herdsmen, and not cultivators of the earth. As far as settlements have been made on one side of this grassy desert by the Spanish Americans, and on the other by the people of the U. S. in western Louisiana and elsewhere, effects have followed natural causes, and the traveller finds wide habitation on the banks of a brook or river, with a small field or two, in which a little maize and

sweet potatoes are cultivated; and from thence the eye ranges over a shoreless sea of grass, on which cattle and horses are seen grazing in all directions. This is not the fiction of a sportive imagination; it is a reality which the eye that directs the pen that records the fact hath seen innumerable times. And it is here noted as illustrative of how much man is influenced in his modes of existence, his manners, and political condition, by the soil, climate, and other natural phenomena around him; and to the operations of which, as he cannot control, must submit. And such is the flexibility of human nature, that what was necessity, becomes by habit pleasure, and the mounted herdsmen of New Mexico, Texas, Louisiana, and Arkansas, would not change condition with any other people on earth. Free as the plains on which they rove are wide, these horsemen know no luxury beyond their herds, sigh for no distinction but that of managing their steeds with most adroitness.

Such is the germ of a people, which, in the short lapse of two centuries, will inhabit a surface more than equal to two-thirds of all Europe. The mind cannot detach itself from this truly interesting subject without reflecting, that, to the physical similitude between the deserts of Arabia, and the steppes of central Asia, with the interminable plains of interior N. America, a strong moral resemblance does, and ever must continue to exist between the respective inhabitants of those distant regions.

To the many other features in common between the prairies of Red and Arkansas rivers, and the steppes of central Asia, is the prevalence of muriate of soda, (common salt) which, as has been observed, renders the water of those rivers brackish.

When we turn our eye to the entire surface of the valley under review, we find it divided into two very unequal portions. The grand recipient, the Mississippi, is seen rolling almost at one extremity; a narrow strip of land, with rivers of very small comparative magnitude, skirt its left bank. This confined border of about 500 ms. in length, by a mean width of 50 ms., amounting to 25,000 sqms., is opposed by an extent of 305,000 sqms., watered by the great volumes of White, Arkansas, and Red rivers. Consequently the valley is divided into two sections, the proportions of which exceed 16 to 1.

Next to the Mississippi itself, the Arkansas river, would appear the most prominent object on this almost interminable landscape. When the Missouri is assumed as the principal stream, the Arkansas, in point of length, ranks as its second confluent, being longer than either the Platte, Mississippi Proper, or Ohio, which follow in order. The sources of the Arkansas remain unknown, to any precision, but are generally supposed to extend to N. lat. 42° , and W. lon. from W. C. 34° , the position of its mouth has long been sufficiently well known; it enters the Missouri at N. lat. $33^{\circ} 56'$, and W. lon. from W. C. $14^{\circ} 10'$. This stream, therefore, winds through upwards of 8° of lat. and 20° of lon. Its length, by comparative course, is about 1400 ms.; but by its meanders, must exceed 2000 ms.

The geography of the Arkansas has now become an object of the first importance, as its channel forms, from the 100th degree of lon. W. of London, to its source, if those sources are S. of N. lat. 42°, part of the limit between the U. S. and the Spanish dominions in America.

From the discoveries recently made by captain Long, the magnitude of the Arkansas has been hitherto underrated. A large body of water formerly made to enter Red river, is now found to flow into the Arkansas by the Canadian Fork. The Arkansas is more impeded by falls and cataracts, than any river of the great inclined plane we have noticed. Issuing from an elevated and mountainous region, the bed of this stream is un navigable with large boats, except about 600 ms. above its mouth. From thence it flows in a deep and rapid channel, of about 600 yards wide, to its junction with the Mississippi. The particular tributary streams of the Arkansas remain in great part imperfectly known. This river now gives name to a territory of the U. S., and in the lapse of a few years, will no doubt designate a state of the confederacy, similar to the Illinois, Missouri, and Mississippi.

Next in magnitude of volume, and length of course to Arkansas, is Red river. Like its rival, Red river flows from that spine of mountains, which, ranging from Mexico northward, assumes local appellations in different places; in Mexico this chain retains the native Aztec name of Anahuac; near the sources of Red and Arkansas rivers, it is known as the mountains of New Mexico; and farther N. as the Rocky mountains, or the Chippewan.

Great uncertainty reigns over the sources of Red river; but, if the information given by captain Long be correct, and it is entitled to great credit, those waters which originate from N. lat. 32° to 35°, and W. lon. from W. C. from 25° to 28°, which in all our maps are represented as flowing into the Gulf of Mexico, by the Colorado, and other streams, on the contrary, are the sources of Red river. By comparative courses this stream is about 1000 ms. in length; but following it by its meanders, is probably 1500 ms.

Both the Arkansas and Red river have their regular periodical inundations, similar to the Mississippi, and enter their recipient at the season of flood respectively, with an immense body of water, which in no small degree contributes to supply that enormous mass of fluid, which annually rolls over Louisiana into the Gulf of Mexico. Arising from the saline and ochreous earths through which they flow, the waters of these two great rivers are in a considerable degree brackish; that of Red river so much so, that at Natchitoches, and from thence to its entrance into the Mississippi, it cannot be used either for drinking, or for culinary purposes.

Red river enters the Mississippi at N. lat. 31° 1', and W. lon. from W. C. 14° 40'.

The next confluent of the Mississippi, in point of magnitude, which enters from the right bank below the mouth of the Ohio, is White river. This latter river, though of greatly inferior length, or volume, to the two former, is of great importance from the extent of excel-

lent land it drains. White river rises in the angle between Arkansas and Osage rivers, and has its source mingled with those of both, the latter, also with those of the Merrimack and St. Francis. White river, after a comparative course of about 400 ms., falls into the Mississippi, a few ms. above the mouth of the Arkansas.

St. Francis and Merrimack would neither deserve particular notice amid the description of rivers such as we have been surveying, except as flowing from one of the most interesting metallic regions of this globe.

St. Francis rises in the cities of Washington and St. Genevieve, in the state of Missouri, and flowing S. by comparative course 250 ms., enters the Mississippi about 100 ms. by water above the White river.

The Merrimack rises in the highlands between the sources of the St. Francis and those of the Gasconade, a branch of Missouri, flows E. by comparative course 100 ms., enters the Mississippi 18 ms. below St. Louis.

It is unnecessary here to notice the soil, climate, or productions of the lower Mississippi valley; as these subjects will come more appropriately under the respective heads of the states of Mississippi and Missouri. A reference is also made to the article of Mississippi state, as respects the confluent of the Mississippi river, from its left bank, below the mouth of Ohio.

Total area of the Mississippi Basin, 1,310,000

We may here remark, that including the basin of Columbia, the Trans-Mississippian Territory of the U. S. amounts to 1,144,843 sqms., equal to 732,699,520 U. S. acres.

To close the survey of the Mississippi basin, it only remains to examine the general laws by which the annual floods of the Mississippi are regulated and determined. In order to elucidate this subject, it is necessary to combine, under one view the entire surface of the basin. This investigation embraces one of the most important questions in physical geography; it is to examine one of the most stupendous operations of nature, performed on a scale commensurate with the magnitude of the effect.

In our review of the valley of Ohio, 330.8 feet was given as the elevation of the waters at the junction of Ohio and Mississippi rivers. From want of correct data as to the real length, or general fall of its waters, no satisfactory calculation can be made as to the absolute elevation of the sources of Missouri. We have assumed in this article 3000 feet as the probable height above the respective oceans, of the sources of that stream. In an analysis similar to that on which we are engaged, relative elevation is one of the elements most necessary to a correct result. We may remark in this place, with sincere regret, that during all the time in which our citizens have visited the sources of Missouri,

that the elevation of not one peak or pass has been determined and published. We have, however, some facts which enable us, by analogy, to approach an accurate estimate of the height of the sources of the Missouri. From the extreme cold, and from the late continuance of snow at N. lat. 45 or 46°, we cannot suppose the base of the Chippewan mountains to be in that region less than 2800 or 3000 feet. At the first glance, when is known the great length of the stream, from its discharge into the Gulf of Mexico to its remotest sources, so moderate an elevation of the latter may appear too limited; but 3000 feet would demand very nearly a foot per mile, an enormous descent, much more than double that ordinarily found in rivers. In the foregoing estimate, the absolute height of peaks, or even ridges, is not taken into account.

It has often excited astonishment in those who knew the extent, without duly attending to the structure of the Mississippi basin, that the entire delta is not annually submerged. We now proceed to investigate the causes of the long continuance, and in common years, the moderate elevation of the Mississippi floods. Recurrence to a good map will render intelligible what is to follow, and obvious, that the peculiar structure and relative position of the respective valleys, which compose this great basin, are the true causes which prolong the duration, and mitigate the height of the annual inundation.

In conducting this review, we may consider the basin subdivided into the four valleys already noticed; that of Ohio, Mississippi proper, Missouri, and Lower Mississippi. The relative extent of each has been determined, and the principal streams noticed. If we were to turn an attentive eye to a map of those four sections, and unaided by a single fact drawn from actual observation, it would follow from theory, from its more southern position, and from its length extending E. and W., that the valley of the lower Mississippi must first discharge its waters; the Ohio valley would follow; Upper Mississippi would succeed to Ohio; and lastly would issue the discharge of Missouri, or largest subdivision of the basin; such are indeed the facts.

It would also be evident from inspection, that of every valley taken separately, nature opposes insurmountable obstacles to a simultaneous discharge. Red and Arkansas rivers flow nearly parallel, through 14° of lon., and yet in every year, the discharge of the former precedes that of the latter nearly a month. Red River is the true N. American Nile, though on a smaller scale. That title has been bestowed on the Mississippi with unparalleled absurdity. Except in the single circumstance of each protruding a delta at their respective mouths, no two rivers could possibly present more contrasted features than does the Mississippi and Nile. In fact, except in one circumstance, very little resemblance exists even between the Nile and Red river; the Nile, in common years, has only one flood, Red river has often two; but the floods of the Nile are discharged by regular tides, and as regular depressions, which is exactly the case with Red river, and circumstances which in a very striking manner distinguishes both from the Mississippi river, which rises

and falls by pulsation, if such a term is admissible.

Near the NW. angle of Louisiana, a chain of lakes commences on both shores of Red river, which continue to skirt that stream upwards of 100 ms. The writer of this article examined these lakes, and found them to be evidently formed in the ancient channels and adjacent low grounds of considerable water-courses, the discharge of which into Red river has been gradually impeded by a natural embankment, formed by the sediment brought down by that river. These lakes, as they now exist, are from four or five to thirty ms. in length, and from one quarter to three ms. wide, and are filled and emptied alternately, as the floods of Red river rise and fall; they are, in fact, real reservoirs, which in the rise of Red river, receive great part of its surplus water, and as the river depresses, discharge that surplus slowly, tending very greatly to mitigate the rapid emission of the Red river flood on the delta. As far as the writer is informed, this feature is peculiar to Red river, and distinguishes that stream from every other.

Red river, like the Mississippi, has a flood in autumn; but what may be denominated the annual inundation of that river, reaches the delta in February, and continues through March and April.

The efflux of Arkansas uniformly succeeds that of Red river, but, from its greater length, of course, extent it drains, and also from the more northerly and mountainous country from which its remote sources are drawn, the volume of the former very greatly exceeds that of the latter, though from different causes, both rivers are alike in yielding their waters by slow and regular discharge. The great mass of the flood of Arkansas reaches the delta in March and April, and is therefore simultaneous with the latter part of that of Red river. White river, in strictness, forms part of the Arkansas tide, and flows out with the first flux of the latter stream.

We may here observe, that all the rivers of the Mississippi basin, above N. lat. 37°, are liable to be annually frozen. The Mississippi, at St. Louis, is three years in five passable on the ice with loaded carriages, by the first week in January. The Ohio, in an equal lat. is not so soon frozen, though the cold is equally intense on the latter, as on the former river. The causes, which produce the apparent anomaly, are obvious. The waters of the Mississippi, flowing from high lat., are cooled almost to the point of congelation, when they arrive at the junction of the Mississippi and Missouri; whilst those of Ohio, in the lat. of St. Louis, flowing nearly from E. to W. demand a longer exposure to frost to become frozen. The gradual melting of the ice and snow above the lat. assumed, that of 37°, is another very controlling cause of the slow emission of the general flood.

The Ohio valley, from its compact form, greater comparative descent, and from the medium climate in which it is situated, emits its waters with more regularity than any stream in the Mississippi basin. The Ohio tide of flood occurs from November until March, inclusive, though between two years in five, this river yields the principal discharge in the latter

month. The floods of this valley are more sudden in their rise and more impetuous in their discharge than that of any section of the Mississippi basin. The main tide of Ohio reaches the delta in May. The various streams are, however, so relatively placed, as to render a simultaneous discharge impossible. The effect, therefore of this river, in producing an augmentation of the floods which inundate the delta, is much lessened in its operation.

The Mississippi proper is still more disadvantageously situated, to admit a rapid emission of its waters than the Ohio. Flowing nearly in a N. and S. direction, and through so great a range as 9° of lat. the more southern confluent must be very much exhausted before those towards the source are relieved from fetters of ice. The great body of the Mississippi tide is, however, co-eval with that of Ohio.

It is the accumulation of the waters of the three valleys we have surveyed, and those of the Kansas and Osage branches of the Missouri, which produce what is known as the annual Mississippi inundation. This flood, nine years in ten, reaches the highest point of its elevation at Natchez, between the 10th and 20th of June. Few instances occur in a long succession of years, in which the waters at that city have not commenced their depression by the first week of July. And yet the heaviest mass afforded by the largest natural section, has not yet reached the delta.

Powerful as are the causes which combine to prolong the discharge of the enormous body of waters contained in the three sections of the Mississippi basin we have examined, none contain such controlling impediments to an aggregated and sudden emission, as does the Missouri valley above the Platte inclusive.

The Yellow Stone and Missouri spread their sources through 7° of lat. and assuming a general course of N.E., unite their waters above N. lat. 48°, turn to the E. and S.E., and finally assume, at the Mandan villages, a southern course, after having flown through 11° of lon. The Platte pursues a general course from W. to E. above N. lat. 40°, and flows through 14° of lon. It must be obvious, from what has been shown in this article, or by inspection of a good map, that the higher branches of Missouri must remain frozen, long after those more southward have commenced their rise, and nearly as late as the period of high tide on the delta. The mean motion of the entire mass of water, in any of the confluent of the Mississippi, does not much, if any, exceed one mile per hour; therefore between three and four months are necessary for the passage of water from the extreme sources of the Missouri to the delta of the Mississippi; consequently, though those waters commence their rise in May, they do not frequently reach the delta until late in July, or early in August; of course, at a period when the main spring and summer inundation is very greatly abated, and the water retired within the banks of the Mississippi river.

Though the period of flood is well known to the inhabitants of the delta, and in common years can be calculated within a few days, such is the inequality of the seasons over the whole basin, that no length of experience gives the

probable elevation or quantity. In 1800, and in 1801, the waters of the Mississippi, at Natchez did not attain the height of the banks.

The delta commences at the mouth of Red river, or, more correctly at the efflux of the Atchafalaya. At this place is a gorge, through which the overwhelming mass of surplus water is confined to within 3 ms.; but by the channel of the Atchafalaya, a very large quantity flows out to the right from the main stream, never again to return. One hundred and twenty ms. lower flows from the left, the Manchac or Iberville. Those two streams, the Atchafalaya and Iberville bound the delta, and below their efflux respectively, no water which flows from the Mississippi ever returns; nor are there any bodies of arable land, except upon the immediate banks of the water courses; all beyond is either liable to annual overflow, or morass.

We have now included as much of general observation upon the Mississippi basin as is compatible with the necessary brevity of this treatise, and will therefore conclude our review of that subject with a few reflections upon the delta.

It is evident from either actual view or inspection on a map, that all the space I have designated as within the delta, must have been formed by alluvial deposit; but from that physical fact many conclusions have been drawn, unsupported by the laws of nature, or the geographical physiognomy of the country.

It is a common belief, that the Mississippi frequently changes its bed, and that it flows upon a comparative ridge. Neither of those opinions are correct. The bed of the Mississippi, like that of all rivers, is the deepest valley of the country through which it flows. As high up as the efflux of La Fourche, it is 130 feet deep at low water, and 75 or 80 at Natchez. At New Orleans, the depth exceeds 100 feet. The deepest lakes, in the whole adjacent country, do not exceed 18 or 20 feet, and the very small depression of their surface below that of the Mississippi, shown by the tides, will leave the bottom of the river upwards of 100 feet below that of any other water course or lake in the delta. When the Mississippi is reduced to its lowest point of depression, water ceases to flow into the Atchafalaya, Iberville, and Plaquemine, and instances have occurred, when the same circumstances took place with the Fourche; and yet, as I before remarked, at the very lowest point of its depression the Mississippi water, even as high as La Fourche, is 120 feet deep; therefore, to desert its channel, that great river must quit a bed of upwards of 2600 feet wide, and 120 feet in depth below the lowest of its outlets, and about 140 feet below the general level of the delta.

It remains for me to show the causes of the ordinary misconception, that the Mississippi does desert its channel. A glance of the eye upon a good map, will exhibit the sweeping bends of that great river. In an alluvial soil, the current, where it strikes against one side of the river, wears away a portion of the bank, and deposits it upon the opposite shore. This enlarged section shows the nature of those currents, which are thrown by the points into

the bends, or more correctly from the convex to the concave side of the stream. The consequence is, that the decrement of the banks is from the bends, and the increment to the points, or rather a little below. If by a large curve of the river, two bends approach each other, the intervening isthmus or neck may be worn through by the current, and the river thrown into the new channel. This was the case in three places, since Louisiana was settled by the French; at the mouth of the Yazoo, at that of the Homochitto, and at Point Coupee. The latter name is derived from the circumstance. The former bed of the river, now lakes, has in every other respect, except current, a perfect resemblance to the curves of the Mississippi. Besides those lakes, thus formed within the reach of history, several others exist near the Mississippi to attest the still more ancient revolutions of that stream. Such are Lake Concordia, opposite Natchez, Lake St. John, a few ms. above; Lake St. Joseph, opposite the mouth of Big Black river; Lake Providence, opposite Stack Island; and Grand Lake immediately above the N. line of Louisiana, upon N. lat. 33°.

Of these eight lakes, all are on the right side, except one at the mouth of the Yazoo, and one at that of the Homochitto, and all have, as I before observed, the most exact resemblance to sections of the Mississippi.

Receding from that stream beyond the limits of these, the other lakes, within or above the Delta, assume a totally different appearance, and have the irregular form of similar bodies of water in other places. Those near the present bed of the Mississippi, are monuments attesting the antiquity of that bed. Combining therefore, the depth of the main river, with the general features of the Delta, and other alluvial tracts above, the conclusion is inevitable, that this great river flows in a channel, from which, with the exceptions stated, its waters cannot find another outlet to their general recipient, more easily than any other given river, the Hudson, Delaware, or Susquehannah, for instance.

We must close these already lengthened observations on the Delta of the Mississippi, by a few general remarks upon that stream.

I have already expressed my opinion, that the velocity of the water of that river and of its confluent are overrated. I have formed that conclusion from actual observation, but it may be supported by collateral facts. If any vessel is put in motion, say a steam-boat, in stagnant water, and its rate of going ascertained, that rate must, as a matter of course, exactly counterbalance a current of equal rapidity. Therefore, if a steam-boat could move 6 ms. per hour in still water, it would move 1 mile per hour in a current having a velocity of 5 ms. per hour. It is very commonly and very confidently asserted, that the Mississippi moves 4 or 5 ms. per hour during the time of high water, and yet steam-boats are known to be propelled against its current 3 or 4 ms. per hour. If these two motions are added together, we have 9, 10, or 12 ms. per hour in still water for these vessels. I have been much in steam-boats in the most favourable situations

and when aided by wind, tide and steam, 10 ms. was the greatest distance I ever knew performed in one hour by any of these vessels. Six is I believe, in calm weather, and stagnant water, very nearly their mean rate of motion.

If this latter supposition is correct, and steam-boats are propelled up the Mississippi at the rate of 4 ms. per hour, it will leave 2 ms. per hour for the mean motion of the upper current or surface of the Mississippi river, coinciding very nearly with what I have before stated. This 2 ms. per hour, must however, be considered as the velocity of the upper part of the volume of water, and is, I have no doubt, more than double that of the entire mass.

Mississippi, state of the U. S., having the Mississippi and Pearl rivers on the W., the 35th degree of N. lat. or the state of Ten. N., the state of Al. on the E., and the Gulf of Mexico, and N. lat. 31°, or Lou. on the S. The outlines of this state are :

| | Miles. |
|--|--------|
| From the mouth of Pearl river along the Gulf of Mexico, to the SW. angle of Al., | 80 |
| Along the western boundary of Al., to the NW. angle of that state, on the southern boundary of Ten., | 320 |
| Thence W. along the southern boundary of Ten., to the SW. angle of that state on the left bank of the Mississippi river, | 90 |
| Thence down that stream to N. lat. 31°, | 530 |
| Thence due E. along N. lat. 31°, and the state of Lou., to the right bank of Pearl river, | 105 |
| Thence down Pearl river, to the place of beginning, | 60 |

Having an entire outline of 1185

Area 45,760 sqms., equal to 29,286,400 acres. Extreme S., N. lat. 30° 8'; extreme N., N. lat. 35°. Length from S. to N., 338 ms.; mean width, about 135 ms.

The remarkable resemblance in form and geographical position between the states of Al. and Miss., is obvious on a first glance on their connected maps. In addition to every other point of similitude, both have a prolongation towards the Gulf of Mexico, below N. lat. 31°, of nearly equal area and extent on that gulf.

Of the rivers of the state of Miss., that stream from which the name of the state is derived, claims the first rank.

The Mississippi washes the state from N. lat. 31° to 35°, a distance, following the stream, of 530 ms. The features of the Mississippi have been so amply noticed under the preceding head, that no farther notice respecting it is necessary in this place.

Next in magnitude and importance amongst the rivers of this state, is the Pearl. This stream rises in the state, about N. lat. 33°, and flowing in a general course nearly S., flows into the Rigolets between Lakes Borgne and Pontchartrain, at N. lat. 30° 10', after an entire comparative course of about 200 ms. From N. lat. 31° to its mouth, the Pearl forms part of the boundary between the states of Lou. and Miss.

The Pascagoula rises in the state of Miss.,

About N. lat. $32^{\circ} 40'$, flows in a southern course to N. lat. $30^{\circ} 20'$, falls into the Gulf of Mexico after a comparative course of about 150 ms. The main branch of Pascagoula is known by the name of Chickisawhay, as far down as 5 ms. S. of N. lat. 31° , where it forms a junction with the NW branch, the Leaf river, and from thence to the final discharge takes the name of Pascagoula.

Some streams, but of small note, enter the Bay of St. Louis, between the Pearl and Pascagoula rivers.

The sources of the Amite, Tickfoha, Tangipao, and Bogue Chito rivers are in the state of Miss.

Flowing into the Mississippi, are the Buffalo, Homochitto, Big Black, and Yazoo rivers. Of these latter streams, in point of magnitude, the first rank is due to the latter. This river has its source near the southern boundary of Ten., interlocking with the head waters of Tombigbee. The Yazoo enters the Mississippi at N. lat. $32^{\circ} 30'$, after a comparative course of about 200 ms.

Big Black river rises about N. lat. 33° , between the sources of the Pearl and the Yazoo, flows SW. 150 ms., and falls into the Mississippi at the Grand Gulf, N. lat. $32^{\circ} 5'$.

Between the Big Black and Homochitto, the Mississippi river receives the water of Bayou Pierre, Coles creek, and St. Catherine creek; these creeks are comparatively small, but important from their position, and the excellence of the land they drain. The city of Natchez, though so near the bank of the Mississippi, is situated on a branch of St. Catherine creek, which has its discharge 15 ms. below.

The Homochitto river rises about 50 ms. NE. from Natchez; flows SW. about 100 ms.; enters the Mississippi at N. lat. $31^{\circ} 12'$.

The Buffalo is rather a creek than a river, not having a course of more than 25 or 30 ms. This stream rises in Amite, and flows W. through Wilkinson cty., and falls into the Mississippi 2 ms. above Loftus Heights.

The Tennessee river forms a part of the boundary of the state of Miss., from the mouth of Bear creek to the Tennessee line, at N. lat. 35° , about 20 ms., and ought consequently to be classed as one of the rivers of the state.

We have already observed, that the sources of the Tombigbee were in the state of Mississippi. The sources of Tombigbee rise near the Tennessee line, flow to the SE., and enter the state of Ala. at about N. lat. $33^{\circ} 30'$.

The state of Mississippi has a very confined and incommensurable sea coast, of 60 ms. in extent. In this distance, the Mississippi is the only inlet by which vessels of the smallest size can enter, and in that only schooners of small draught, at high water, can reach the junction of Chickisawhay and Leaf rivers. The Pearl admits no navigation worth mention; and the Bay of St. Louis is a mere indentation of the coast, of no practical use in a commercial point of view.

The Mississippi river is the great harbour and outlet of the state.

The state of Mississippi is naturally divided into four grand divisions of soil: the islands in Lake Borgne, and the Gulf of Mexico; Pine

Forest; Mississippi, and 1 other river alluvion; and the Mississippi bluffs.

Advancing from S. to N., first occurs a chain of low sandy islands, lying about 6 or 7 ms. from the main shore; their names are, ranging from W. to E., the group of the Malheureux (unfortunate) Islands; Mary Anne, Cat, Ship, Dog, Horn, and Petite Bois islands.

The opposing shore, once a part of W. Florida, is a level pine forest to the water edge; constituting the second, and by far most extensive superficies of soil in the state. Receding from the shores of the gulf, inland, the face of the country imperceptibly swells into hills; and though no part of the state rises into elevations that can be designated mountains, much of its surface is extremely broken.

Next in extent to the Pine Forest land, is the range called the Mississippi Bluffs; and lastly, the more confined, but greatly most valuable land, where found above annual overflow, river alluvion. Of these three latter divisions of soil in order.

As we have already observed, the Pine Forests reach the waters of the Gulf of Mexico; and we may add, extend in the intervals between the streams, to the northern extremity of the state. This species of soil, deriving its title from the principal timber it produces, in most places gradually mingles with the river alluvion, or Mississippi Bluffs, and produces an intermediate soil partaking of the qualities of both; and on which oak, ash, hickory, dogwood, sweet gum, and other trees, intermingle with the pine. This mixed soil and timber is known in the country by the name of interval land, and is often found very productive. The pine lands have hitherto been considered extremely sterile; how far future modes of culture, or artificial means, may tend to meliorate this species of soil, remains an undecided problem.

In the northern parts of the state of Miss., towards Ten., the pine woods are frequently interrupted by a species of prairie, or rather barrens, on which grow shrub oak, and other dwarf bushes; but the soil continues to exhibit the unproductive character of that of the pine woods.

It would not be hazarding much, to estimate the extent of these barren tracts at two-thirds of the entire area of the state.

In all the length of the state of Miss., from N. lat. 31° to 35° , a range of bluffs extends. These bluffs reach, and are washed by the Mississippi in a few places only. Immediately above N. lat. 31° , rises the highest of these bluffs, known by the name of Loftus Heights, which skirt the river 4 or 5 ms. A very large curve of the Mississippi, to the W., leaves an extensive overflow tract along the right bank as high as Ellis's Cliffs, where, by an eastern curve of the river, the bluffs are again washed by the stream; which is also the case at the city of Natchez. Above the latter place, the bluffs and river do not again come in contact below the Grand Gulf at the mouth of the Big Black river. The bluffs again reach the stream at Walnut Hills, below the mouth of the Yazoo and at the Chickisaw Bluffs, immediately at the NW. angle of the state.

These bluffs are the mere extension of the

comparatively elevated surface of the state of Miss. over the low grounds of the river of the same name.

When the waters are low, it is found that the bluffs are underlaid by a crude concrete of sand and pebbles, held in mass by an oxide of iron, the whole, no doubt, resting on a secondary base.

The elevation of the bluffs vary, but about 100 feet mean height would not be a serious departure from fact. They are cut into hills by the abrasion of water of the numerous streams which flow from the pine woods in the interior.

What renders these bluffs and hills objects of peculiar interest, is the quality of the soil, which is in almost all places good, and in many exuberantly fertile. Receding from the bluffs, the pine forests imperceptibly encroach, and in some places, at a more or less distance from the river, say in a direct line from 15 to 20 ms., closes the productive border.

The foregoing limit is taken in general; many of the water-courses have fertile tracts on their banks, farther into the interior of the state; but the latter description of land belongs more particularly to river alluvion, than to the soil of the bluffs or hills.

The soil of the bluffs and hills is a rich loam, resting on clay; and digging wells has disclosed the fact, that the general substratum to the clay is loose sand.

The whole of this fine border of soil, in a state of nature, is covered with a very dense forest, with an underwood of reed cane, the *Arundo gigantea*, many species of *vitis*, *smilax*, and other climbers, and an infinite variety of more humble vegetables.

A mere list of the most prevalent timber trees will serve to demonstrate the fertility of this tract; these are,

Black oak, white oak, Spanish oak, black jack oak, willow oak, wild cherry, sweet gum, poplar, large laurel, beech, *figus pumila*, here a tree often forty feet in height, and eight or ten inches in diameter; black locust, mulberry, persimmon, honey locust, black gum, cotton wood, linden, mucilaginous elm, sassafras, sycamore, ash, black walnut, bitternut hickory, nutmeg hickory, and red flowering maple.

Of more humble trees and shrubs, and other vegetables, the following are most indicative of fertility of soil; papaw, dogwood, spicewood, Spanish mulberry, buckeye, poke, blackberry, muscadine, and reed cane.

It would swell this article to too great length, to give a mere list of the most interesting vegetable productions of the fine tract under review; the foregoing are inserted as illustrative of its natural fertility.

When compared with the entire extent of the state, the productive tract before us is confined in extent; but when we turn our attention to the exotic vegetables which are, or can be produced within its limits, the intrinsic value of the land is rendered apparent.

Indigo, tobacco, and cotton, have in turn been cultivated as staples, and produced in great abundance: the latter has for more than twenty-five years past superseded the two former, and will, in all human probability, continue the great staple of this part of the U. S.

Much speculation has been made upon the quantity of cotton which is, or can be produced per acre, upon the bluff lands. The writer of this article, from some personal experience, will undertake to assume 250 pounds of clean cotton as about an average crop.

To cotton, indigo, and tobacco, may be added, as the exotic plants cultivated in the state of Mississippi, Indian corn, (zea maize,) oats; and, where the inhabitants choose, wheat may be produced; but the culture of that grain is seldom attempted. Most garden plants grow luxuriantly, though good gardens are rare. That species of potato, the tuberous rooted solanum, commonly called Irish potato, is cultivated, but does not succeed so well, either as to quantity or quality, as the same vegetable does farther northward. The sweet potato (*convolvus batatas* of Muhlenberg) is produced in the utmost abundance.

Of cultivated fruits, the principal are the apple, peach, and fig; the latter, below N. lat. 32°, seems to flourish as if natural to the climate. The plum, nectarine, apricot, &c. are cultivated, but not extensively.

Like all the southern states of the U. S., meadows cannot be correctly said to exist in the state of Miss.

Though the winters are in general mild, the seasons are extremely variable. Frequently frosts occur of sufficient severity to destroy cotton, indigo, tobacco, and other tender plants, as early as the first week in October; whilst, perhaps in the next season, the flowers of the same vegetable will be found blooming in December, and even in January, as was the case in 1805.

No winter, however, passes without frost, and very few without snow at Natchez. In December, 1800, the thermometer of Fahrenheit fell to 12°, 5 mi. S. of Natchez, and often since that period, the cold has been nearly, if not altogether, as intense. This annual severity prevents, to the almost southern extremity of the state, the cultivation of either sugar cane or the orange tree; vegetables which are, in fact, confined to the state of the Mississippi to a latitude N. of most parts of the state of Miss.

The bluff lands are followed by the river alluvion, which, though less in quantity, is still more productive, where some annual or casual overflow. From the bluffs continuing, and of consequence raising the accumulation of the surplus water of the Mississippi in the spring and summer, there exists a fertile soil on the left bank of the Mississippi river, in the state of that name, then on the right bank in Arkansas, Louisiana, and in Florida. Some very wealthy settlements on the left bank do, however, exist, with the exception of the usual fertility of river bottom lands. The arable border varies from half a mile to 200 yards and is every where terminated in the rear by overflow grounds, submerged annually from one to ten or twelve feet.

The natural growth of the river arable border is, in general, sweet gum, different species of oak, ash, and hickory, mulberry, sycamore, &c. with an under growth of reed cane, and below N. lat. 31° 30', the palmetto. In the

evergrown swamps, the principal timber is cypress, tupelo, different species of oak and hickory, maple, sweet gum, and ash. On all other water-courses in the state, more or less alluvion occurs; but in all places is confined in extent, and on the streams in the interior, often merges into the interval land or pine forest.

Taken together, the bluff lands and river alluvion amount to about 5560 sqs., equal to 3,553,400 acres. The bluff lands extend from N. lat. 31° to 35°, with more or less width, as the rivers intervene.

Confined as the two foregoing tracts of land are when compared to the area of the state, of which they form a part, they nevertheless form, in the aggregate, the most extensive continuous tract of productive soil in the U. S., S. of N. lat. 35°; and when its fertility and local advantages are taken into view, it is hazarding no violence to truth, to estimate this region as one of the most valuable in the U. S.

The country near Natchez was settled by the French in 1718, and Fort Rosalie built on the bluff, within the now incorporated limits of that city. The first French colony was massacred by the savages, in 1729, and the country remained uninhabited by the whites many years afterwards.

In 1763, Natchez, then considered a part of West Florida, was ceded by Spain to Great Britain, who retained possession until 1781, when that place and all West Florida was conquered by the Spaniards under Governor Bernardo Galvez; and, by the treaty of Paris, West Florida was confirmed to Spain. As the limits of the British and French colonies, and afterwards those between the British and Spanish colonies, had never been fixed, the Spanish authorities held Natchez and the adjacent country as an appendage of Florida until 1798, when the city and country were evacuated by the officers and troops of Spain, and the U. S. commissioners took full possession. In 1799, the line of demarkation was completed, and the boundary fixed, which now separates the states of Louisiana and Mississippi, between the Mississippi and Pearl rivers.

April 7th, 1798, an act of Congress was passed, authorizing the President of the U. S. to appoint commissioners to adjust the limits of the territory W. of the Chatahoche river.

May 10th, an act was passed for the organization of a government, and the territory named "The Mississippi Territory."

June 9th, 1808, an act passed, admitting a delegate from the Mississippi Territory in Congress.

June 17th, the assent of Georgia demanded, for the formation of two states out of the Mississippi Territory. This demand was subsequently acceded to by Georgia.

January 21st, 1815, a petition from the legislature of the Mississippi Territory laid before Congress, praying admission into the Union on the same footing with the original states. A committee of Congress reported on this petition favourably, December, 1816.

A law was passed in consequence, March 1st, 1817, authorizing the call of a Convention, which was called, and met July, 1817, accepted the terms proposed by Congress, framed a con-

stitution, August 15th, which was accepted by Congress in December following; and the state of Mississippi assumed her station as a member of the U. S. Since the period of admission, no event of consequence, in a general view, has taken place in this state.

The appropriated and inhabited part of Mississippi, at the epoch of taking the last census, (1820) was subdivided into the following counties:

| Counties. | Inhabitants. | Sqms. | To sqm. |
|--------------|---------------|---------------|-----------|
| Adams, | 12,073 | 480 | 26 |

The only parts of Mississippi on which an adequate comparative pop. has yet been formed, is confined to a strip of about 100 ms. along the margin of the Mississippi river, extending to about a mean of 30 ms. wide inland. This will embrace all the 5 river counties, Warren, Claiborne, Jefferson, Adams, and Wilkinson, and the best peopled parts of Amite, and Franklin counties; and will include about 42,600 inhabitants, on this river section of the state, or about 14 to the sqm. Deducting 42,600, from 75,448, will leave 32,848, for the residue of that part of Missp. included in the foregoing estimate. This exhibits a space of 9,720 sqns., inhabited by 32,848 persons, or a small excess above 3 to the sqm. The inhabited Mississippi river section of this state, lies between lat. 31° and 32° 30' N. The inland, or more correctly, south-eastern section, lies between lat. 30° 10', and 31° 52' N.

Cotton is the general staple.

By the census of 1820, the pop. of Missp. was found composed of 42,176 whites, 32,814 slaves, and 458 coloured persons, and classed thus:

| | |
|-------------------------|--------|

Mississippi was admitted into the Union, as a state, December, 1817.

Missylonghi, or more correctly *Mezzyalonghi*, is, or was a town of Greece, in the Turkish province of Xeromenes, ancient Astolia. This city, not unaptly called the Venice of Greece, is situated on the SE. side of the salt marsh, or shallow which extends between 2 and 3 ms. into the land below Nafotico, and still 6 ms. be-

yond Missolonghi itself, into the Gulf of Lepanto. Missolonghi, is distant about 20 ms. from and nearly opposite Patras in the Morea, and about an equal distance NE. from the islands of Carzolari. Lat. $38^{\circ} 36'$ N. lon. $21^{\circ} 34'$ E.

Though a port of much consequence, the bay or shallow harbour of Missolonghi, admits vessels of only 3 feet draught. The entrance is defended, or rather obstructed, by a small fort called Bosillida, 5 ms. distant from the town. The rows of stakes, placed by the fishermen, along the outer line of the shallows, towards deep water, give the appearance of a double coast to Missolonghi and its environs, when seen from the Gulf of Lepanto.

After a siege of 4 months, this devoted place was blown up by its desperate inhabitants, on the 23d, of April, 1826. The inhabitants preferred death to Turkish mercy. The Turks offered terms, which the inhabitants refused, and mixed their blood and bones with the ruins of their native city.

Missolonghi, or *Mezolonghi*, a town of Greece in the Morea, about 13 leagues from the Gulf of Chlarenza, ancient Cyllene, 12 ms. SE. from Gastouni, ancient Elis, and 40 ms. nearly SSE. from Missolonghi in Roumelia; lat. $38^{\circ} 2'$ N. lon. $21^{\circ} 50'$ E. Missolonghi of the Morea, contains about 200 houses, scattered along the slope of a mountain, with a well cultivated vicinity. The names of these towns are taken from the Italian, and ought to be written, Mezzolonghi, and pronounced, Mettzolongee; the g hard.

Missouri in point of extent, is the third state

of the U. States, and only falls below Virginia and Georgia.

Though part of this state is hilly, and some of the hills approach in elevation the dignity of mountains, yet, strictly speaking, no mountains, either in detached grounds or chains, exist within the limits of the state.

For every object of human affairs, rivers are the most important features of an inland country, and few regions of the earth, of equal extent, can compare with Missouri in the magnitude, number, and navigable facilities of its rivers.

Of these the first in order is the Mississippi and Missouri, both of which have been so amply noticed in our description of the Mississippi basin, that no further account of them is necessary in this place.

The Lemoine river, though for a few miles forming part of the boundary, can scarcely be called a river of Missouri. The Osage, rising in the territory of Arkansas, and flowing NE. into the Missouri, is the most important confluent of that river in the state of Missouri. The Osage has its mouth near the centre of the state, where the future seat of government is intended to be placed. The Osage is a large navigable stream in all its length in the state, and waters some excellent, and much good land.

Besides the foregoing large streams, the Missouri receives from the right, below the mouth of the Kansas, Blue Water, Gasconade, and some smaller streams; and from the left, Grande, Charlaton, Good-Woman's, Great Manitou, Otter, and Charette rivers. The Merimack enters the Mississippi 18 ms. below St. Louis, but has been noticed, as have been White and St. Francis rivers, which closes the list of the streams of the state of Missouri.

The position of Missouri is in a high degree favourable to commerce, pop., and wealth. Extending 43° of lat., its temperature must vary considerably, if uninfluenced by any other cause than mere geographic extent. This is not, however, the case, as will soon appear.

In conducting this general survey, I have endeavoured, in a particular manner, to delineate those features which influence the meteorological phenomena, and the temperature of the seasons, and also to point out the great outlines of soil. In respect to Missouri, it will be necessary to deviate from the strict observance of the plan pursued in describing the state of Mississippi. Instead, therefore, of dividing the former state into its natural sections, in relation to soil, we will take each of its river districts by itself.

We have seen that the river Mississippi washes Miss. on its NE. and SE. frontier, 550 ms. following the meanders, though, by comparative course, the distance along the Mississippi would not exceed 350 ms. Though the mere banks of the Mississippi preserve a nearly uniform character in all their extent along the front of Miss., yet, from difference of climate, the vegetable productions are very different at the two extremes. So much has already been said on the features and quality of the alluvial margins of the Mississippi, that it is needless to amplify on the subject.

Ascending the Mississippi from its mouth, no

Minence is to be found on its western bank in a distance of upwards of 1000 ms. Twenty-eight ms. above the junction of Mississippi and Ohio, occurs the first rocky bluff on the right bank. It is composed of an enormous projecting precipice of limestone, whose real height above the water, has never been very satisfactorily determined. This ledge is, no doubt, a continuation of the great limestone formation of the Ohio valley. In Missouri, it is a part of a ridge of hills which continues from this point westward, through the state, and ranges between the waters of Arkansas, and those of Osage and Kansas rivers, perhaps to the Chippewyan mountains. This ridge divides Missu. into two very distinct climates. In the south-eastern part of the state, along the Mississippi river, the cotton plant is cultivated, though only for family use; as an object of commerce, it offers no great advantage: but, above the ridge in question, that plant ceases, and a region commences favourable to the production of the cereal gramina.

Near the Mississippi, below the limestone ridge, the banks are in every respect similar to what they have been described in Louisiana. The rear lands, as far as the St. Francis, are analogous to grounds similarly placed, in all the distance from the limestone range to the sea marsh.

The St. Francis rises partly in the hills of the limestone ridge, and in part from the drain of the Mississippi. The north-eastern branch of that stream appears to have been formed from an ancient outlet of the Mississippi, and to have contained a volume of water much larger than passes by its channel at present. The ordinary distance between the two rivers is about 50 ms., flowing nearly parallel from N. lat. 37° to N. lat. 43° 30', where the St. Francis, by a gradual curve towards the lower part of its course, joins the Mississippi. The north-western branch rises near N. lat. 38°, in a very hilly, broken, rocky, and barren tract of country. There are some good lands, but in no quantity commensurate with the extent drained by this river, whose whole length, by comparative course, is 250 ms., one half in Missu., and the other in Ark. Extensive settlements have been made on the sources of the St. Francis and its tributaries. According to the very respectable testimony of Mr. Schoolcraft, from personal observation, the country from which the western, or rather north-western sources of St. Francis flows, is primitive, composed of granite, gneiss, and other congregate rocks; amongst which are situated one of the richest iron; and the most abundant lead mines on the globe. The geological notices of Mr. Schoolcraft deserve the utmost attention; because made by a professed mineralogist, and a man who visited the region to collect facts, and not to support any preconceived theory. This gentleman has been, it must be acknowledged, much too general on a fact so important as the existence of a primitive region W. of the Mississippi, and so near that stream. He has however, enriched our literature with by far the best account extant of the mineral resources of Missu., and very correct, though brief notices of its soil and vegetable productions.

Black river, the N. fork of White river, rises in the southwestern part of Missouri, by a number of branches, of which Strawberry river, Spring river, and Currents river, are the principal. The sources of Black river, are in the ridge of hills, or rather mountains, which have been already noticed. The base of country drained by Black river is calcareous, consequently the soil is very productive. The climate, as to temperature, is in no respect essentially different from that of St. Francis. The former, from superior elevation, and more exemption from stagnant water, is no doubt much more salubrious than the latter. Like all calcareous regions, that of Black river affords some very large fountains of water, from one of which Spring river takes its name. The surface watered by Black river, is about 8000 sqms. The timber is extremely large and varied. On the streams, cotton wood, different species of hickory, oak, and elm, prevail. The sugar maple is found, but the climate is rather too far S. for the profitable extraction of its sap. The *liriodendron tulipifera* is also found in this section of country, of an enormous growth. Oak is, however, the prevailing tree on the waters of Black river. Like Tennessee, and the southern parts of Kentucky, the vegetation of the southern section of Missouri, partakes of the specific variety of the northern and southern extremity of the United States. Cotton is cultivated, but rather for domestic use, than as a commercial staple. The cereal gramina produce abundantly: though, on the verge of the prairie country, Black river drains a very dense forest. In fine, that part of Missouri south of the ridge we have alluded to, and watered by St. Francis, Black, and Mississippi rivers, may be with propriety considered as naturally connected with the Arkansas basin, though politically included in Missouri. The ridge is generally clothed with pine, the soil sandy, and extremely steril. It in fact divides the state into two unequal zones, of very different temperature.

The Merrimack rises near the centre of the state; has its source in the dividing ridge, though its course is nearly E. along its northern slope. The length of the Merrimack, is not above 120 ms., comparative course. Its sources are in a steril pine forest, and most of its banks partake the character of the soil from which it flows. It is an unimportant stream, in either a geographical, or agricultural point of view, though in respect to mineral wealth, one of the most remarkable in the United States.

The mine tract, according to Mr. Schoolcraft, the best authority on the subject, extends in length from the head waters of the St. Francis, in a NW. direction, to the Merrimack, a distance of 70 ms., and from the Mississippi, in a SW. direction, to the Fourche à Courtois, a distance of about 45 ms., and covering an area of 3150 sqms. The same author remarks, that it is not in every section of it that lead is to be traced, and he describes the mineral character of the soil, rocks, and other fossil bodies of this tract, as subject to so much variety, as to render indications of ore difficult to reduce to any safe result. The aspect of the country is steril, hilly, and in many places precipitous.

Many highland barrens, level but stéril, checker the mine district. The soil in general, is a reddish coloured, hard, stiff clay, admixed with much siliceous gravel. Nodules of iron-ore and pyrites are frequent. The mineral hills are covered in most places by a stunted growth of oaks, principally the post oak, the *quercus obtusiloba* of Michaux. A line of pine separates the sources of St. Francis from those of Merrimack, and passes through the mine tract in a direction from NW to SE. Though in general, the soil of this tract is unproductive, the banks of some of its streams are very favourable exceptions. This fact is elucidated by the forest trees found on this alluvial soil; which are, sycamore, elm, cotton-wood, walnut, maple, buckeye, hackberry, ash, papaw, spice-wood, and other trees and shrubbery, indicative of fertile land. Mr. Schoolcraft mentions a fact, of which, from the accompanying remarks, he seems not to have understood the cause. He observes, that around many of the mines, the earth, thrown out and raised from great depths, produces trees and shrubs which are not peculiar to the surface, and instances the cotton-wood, of poplar, and beech-grapes, the *vitis riparia*, I presume. He states, that he frequently saw those vegetables growing near old diggings, where the earth had been raised 50 or 40 feet, and where, previous to those diggings, no such trees or vines existed. It is well known to botanists, that the seeds of many, perhaps most plants, if buried at great depths in the earth, will retain their vegetable organization for countless ages. The indestructibility of the seeds of plants is, indeed, one of the most curious subjects of philosophical reflection and research. Mr. Schoolcraft ascribes the cause of the phenomenon to that opprobrium of science, equivocal generation; a supposition at variance with all the laws of analogy, as applied to organized beings. The fact proves unequivocally, that the country has undergone great changes in its external crust, since the vegetables cited deposited their seeds in the soil, now covered by extraneous and very different bodies.

Here, as in every other place, where silica forms a large part of the soil, the spring water is clear, cool, and of course, wholesome, and being exempt from the causes that produce disease, stagnant water and decaying vegetables, the mine country is possessed of an atmosphere of the utmost salubrity.

The change of climate between the region watered by Black and St. Francis rivers, and that by Merrimack, is apparent in the vegetables cultivated by the inhabitants of each. On the Merrimack, wheat succeeds extremely well, a fact no where perceptible S. of the dividing ridge. Wheat, and indeed all the cerealia, may be, it is true, cultivated even in Louisiana; but below the 38° of N. lat., wheat, rye, and barley, evince that they are removed from their congenial climates; and in no part of N. America, except some of the table land of the great spine of Anahuac, or Chippewan, where elevation compensates advance towards or into the tropics, does the cereal gramina, except maize, attain the full development of their growth. And even maize, in Louisiana, Mis-

issippi, and Alabama, does not by any means attain the rich and abundant produce of that grain, as in the Mississippi basin, above N. lat. 35°. The same remark applies in a striking manner to the apple. This most valuable of all tree fruits, deteriorates about the same latitude with wheat. The apple, W. of the Mississippi, first grows to advantage above the mine district. The peach-tree finds its most congenial air about N. lat. 38°, though it is a fruit possessing in the United States, a much wider range than the apple.

The Osage rises, about N. lat. 37°, W. lon. from W. C. 21°, and flows E. a little N., having a comparative course of 400 ms., one-third of which is in Missouri. This river rises in the great western prairies, and, like every stream of that region, exhibits some very productive and a large proportion of stéril land. Its meanders are in the lower part of its course very winding, consequently it contains much alluvial soil in proportion to its length, estimated comparatively.

The banks of the Missouri and Mississippi, are uniformly in a high degree productive, and contain perhaps one-third of all the valuable arable land of the state. The right shore of the Mississippi is, from the waxy bottom to the mouth of the Missouri, in most places, an enormous limestone wall. This distance is about 170 ms. This limestone is merely the buttress of the underlaying strata of the interior country. The Mississippi flows in a deep channel, whose sides are elevated near 200 feet above its highest surface. Those precipitous banks are continued in the Missouri. The rich alluvial bottoms are at the base of this limestone precipice, and no doubt derive much of their fertility from the calcareous debris that the abrasion of the waters, in past ages, has worn away and deposited below.

About one-third part of Missouri lies N. of Missouri river, and W. of Mississippi river. This, in point of soil, is much the best part of the state. It is more uniformly fertile, though less diversified in surface, than the section S. of Missouri, and SW. of the Mississippi river. The northern section is also much chequered by small rivers, which generally flow S. into Missouri, and though mostly forest land, some extensive and very productive prairies occur. South of Missouri, there exists no medium between the best and worst lands, and similar to all those parts of the United States below the Missouri, and W. of the Mississippi, the good soil extends in lines mostly upon the alluvial banks of rivers, or along the margin of prairies, and, consequently, can never admit a dense and scattered population. This is not so much the case with the northern section; the farms will assume in that quarter something of the promiscuous extension over the face of the country, which is characteristic of settlements in the northern and eastern states.

Taken as a whole, Missouri, like most new countries in the United States, has been, as a body of arable land, greatly overrated. As a commercial position, if due allowance is made for its internal situation, the value of this section of our country has never yet been duly appreciated. The truly astonishing assemblage

Strivers, which seem to have sought a common centre of union, would indicate St. Louis, or some other place in its vicinity, as the future *entrepot* between widely extended, and far distant portions of our empire. If the pursuits of mankind, and their individual means of subsistence, were exclusively agricultural, Missouri could never, in proportion to territorial extent, possess a population equally dense with New York, Pennsylvania, Ohio, Indiana, or Illinois; but in the complex admixture of employment, and the illimitable transmission of the products of human labour, arising from the improvement of modern manners and arts, population does not depend for its entire subsistence upon the quality of the soil inhabited by any portion of mankind. Commerce and the plastic arts demand, perhaps, as many hands as agriculture. There is, indeed, no employment of human labour, where so great a surplus is produced, as that of agriculture; and none in which the industry of a few will so effectually supply the wants of many. It is for this reason that the density of population must, particularly in such places as Missouri, depend as much, if not more, upon commercial, mining, and manufacturing pursuits, as upon the operations or resources of agriculture. In addition to the apparently inexhaustible stores of lead ore, some of the most abundant iron mines in the world, exist on the Missouri river, and in the interior of the state. In Washington city, Bellevue settlement, in addition to lead, says Mr. Schoelleraft, "in the richness of the ore, and extent of the beds or mines, is no where paralleled. The most noted plane is the iron mountain, where the ore is piled in such enormous masses, as to constitute the entire southern extremity of a lofty ridge, which is elevated 500 or 600 feet above the plain." Water power to work this mass abounds in all directions. It is however, only one of a number of mines of this really most precious of all metallic bodies, which lie scattered over the sources of St. Francis and Merrimack rivers.

In the same vicinity, and in fact over the entire lead tract, ores of zinc abound; a very interesting fact in the mineralogy of Missouri. Zinc is, when it can be cheaply procured, one of the most useful metals, answering nearly all the purposes, without the destructive qualities of copper. Zinc has been hitherto considered a scarce ore, and should it be found in large bodies in the Mississippi basin, will add a very important article to the resources of that fine region.

The most singular circumstance in the mineralogical history of the interior of N. America, is the abundance and extent of the stores of muriate of soda, common salt. Amongst the revolutions effected in the last forty years on the condition of society, there is none more salutary to private convenience, than the change in the price of salt in the interior of this continent. I remember when the supply for W. Pennsylvania and W. Virginia, was procured by transportation from the Atlantic slope. At a period when money was at least 100 per cent. above its present value, salt cost in those places, five dollars per bushel, at a *minimum* price. It is now manufactured in a great variety of places,

where the face of the earth gave few indications of its existence.

There is good reason to believe, that at certain depths, the whole basin of the Mississippi is saturated with salt water; a fact which, combined with the abundant existence of limpid fresh water at the surface, is highly consolatory.

Where muriate of soda prevails to such excess, as in some parts of the Spanish internal provinces, the earth becomes uninhabitable, cold, and sterile. This is also the case with part of central Asia. In Europe, salt is procured generally from the sea, or found in substance in mines, as at Guadaloupe in Spain, and more particularly, Wielitzka, near Cracow, in Austrian Poland. In North America, this mineral has not been found in solid imbedded masses, though no reasonable doubt can be entertained, but that the bowels of the earth must contain prodigious bodies of that fossil in its crystalized state, in places where it is so very extensively held in solution by water. It may be safely expected, that in some future day, muriate of soda will be quarried in the Mississippi basin, as in Spain and Poland.

Coal has been mentioned amongst the mineral products of Missouri; but I am unacquainted with any extensive body of that fossil yet brought into use in that state. Mr. Bradbury speaks with enthusiasm of the enormous strata of both coals and iron, which lies many parts of the banks of Missouri, but the coal spoken of by this author, is generally above the limits of Missouri.

Many other mineral substances, of less value, have been discovered in Missouri; but so much of the area of the state remains unsettled, that its mineral and vegetable wealth have only commenced their development. From what is known much may be expected; few sections of the earth, of equal superficies, and of so recent civilized colonization, have exhibited so rich a variety of mineral resources as southern Missouri.

This state is in a peculiar degree remarkable, as forming the connecting link between the forest and meadow or prairie sections of North America. That enormous forest, which may be remarked as covering the entire Atlantic slope, nine-tenths of St. Lawrence basin, all the basins of Appalachicola and Mobile, and the Delta of the Mississippi, and most parts of the left side of its basin, reaches into Missouri, and covers nearly all its southern and south-eastern sections. This great body of woods is indented in Ohio, Indiana, and Illinois, by a protrusion of the prairies, which expand, advancing SW., and range through Missouri S. of Missouri river. On the W. border of that state, on the Osage, and near the junction of the Missouri and Kansas rivers, the prairies usurp much the greater share of the surface of the whole country. Lines of woodland follow the streams, leaving the intermediate spaces open plains. Those lines of timbered ground gradually become more attenuated westward, until nearly one unbroken waste spreads over hundreds of ms. The peninsula between Missouri and Mississippi rivers, is not so naked of timber as are the sources of the Arkansas, Kansas, and Platte rivers, yet immense prairies occur on

the former region also. Over an extent much more than equal to the inhabited parts of the United States and Canada, the winds of the N., W., and SW., breathe over Missouri, without much impediment from mountains, hills, or forest. It will be seen in the sequel, that from this exposure arises the peculiarly variable and cold climate, which prevails near the junction of the Mississippi and Ohio rivers. If due attention is paid to the physiognomy of the adjacent regions, it will at once be seen, that the surface of Missouri is in a peculiar manner liable to extraneous influence. To the SW., for upwards of 1200 ms., expands an open desert. To the W., as known, the extension of the same desert leaves the earth a void. To the NW., a two-fold cause superinduces a flux of cold air over Missouri. The openness of the immense region in that direction, and the constant volumes of cold, and often frozen water, brought down by the Mississippi and Missouri rivers. It is from these combined causes that such excessive changes are felt, and inequalities of seasons experienced, to extremes scarcely known in any other spot on this planet. It is from this complicated climate, that in N. lat. $38^{\circ} 30'$, the rivers are frozen, four years in five, before the end of December. Another phenomenon has been observed in Missouri, which in a striking manner distinguishes its seasons from those of Louisiana or the Atlantic slope; that is, the much less moisture in the atmosphere of the former. Though frosts are so rigorous at St. Louis as to render the Mississippi passable on the ice before the beginning of January in ordinary seasons, yet deep snow or drenching rains are uncommon. The air is commonly dry, cold, and elastic. In reality, the position of Missouri, Arkansas, and Louisiana, are singularly worthy of philosophic attention. A dense forest covers all the alluvial bottoms of the Mississippi, and those of its confluent. On the east side of that vast recipient, we have seen this forest only terminated by the Atlantic Ocean. On the W., it is followed by the prairies or desert we have noticed. Moisture is as remarkably abundant in the forest tracts, as it is wanting in the prairies. The natural consequence of the position of places, on the confluence of two regions whose meteorological constitutions are so essentially different, is an exposure to the extremes of both, following the current of air. This is, in an extraordinary degree, the case with Louisiana, where two successive seasons may differ so much, as one to present an almost constant deluge of rain, and the other scarcely affording a single shower. Ascending the Mississippi, the quantity of rain becomes less in a given time, at least as far N. as 42° .

A remark may be made in place, that what may be designated the rainy and dry seasons, are not confined to the tropics. Rain and snow are mere relative terms; therefore, in the U. States, the rainy and dry seasons are nearly as regular in their succession and periods, as similar seasons are within the tropics. The difference is rather in the quantity, than in the times of rain and fair weather. To this theory, Louisiana is the most remarkable exception: and when viewed in connexion with

the adjacent and distant regions, the causes of the aberrations of the seasons of that state, are at once to be conceived, and clearly understood. It ought, however, to be recollected, that we are now making a natural and not a political survey; therefore, in specifying Louisiana, the Delta of Mississippi and contiguous places are meant. It is when making such expensive surveys, and elucidating the phenomena of nature on so large a scale, that the full value of maps can be fully appreciated. Without maps, no enlarged views of the laws of meteorology could ever be formed by any exertion of the human intellects; and it is from neglect of such comprehensive combinations, that so many crude notions on particular climates pass current.

The climate of Missouri is consequently liable to great extremes of heat and cold. The winters of St. Louis are severe; the Mississippi, in ordinary seasons, being frozen before the end of December. The illimitable plains to the SW. and W. of the state, leave an open vent to the winds, and superinduce a much greater severity of cold in a given lat., than on the Atlantic coast.

The seasons of Missouri partake of the unsteady character of the climate of the Mississippi basin, and indeed of the continent of North America in general. No two seasons in succession have much resemblance to each other. The occurrence of first frost in autumn, the last in spring, or the quantity and times of rain and snow in winter, are equally uncertain.

In one respect, the climate of Missouri differs essentially from that on the Atlantic slope in similar latitudes: as we before observed, less moisture falls on the former than on the latter, either as rain or snow. This circumstance has misled many as to the real nature of the climate of Missouri, and has given to it a character of mildness, the reverse of the fact.

The productions of Missouri have been noticed, both vegetable and metallic. We may merely add, that the vegetables usually cultivated, are those found in the middle states generally.

In metallic and other fossil substances, Missouri is perhaps the richest region in the United States. The following catalogue, given by Mr Schoolcraft, yields a result, which strongly illustrates the mineral wealth of that state, where most of the substances are found.

Metallic Substances.—Native iron, red oxyd of iron, iron sand, native magnit, argillaceous oxyd of iron, micaceous oxyd of iron, iron pyrites, brown hematite, sulphuret of zinc, sulphate of zinc, sulphuret of lead, granular sulphuret of lead, earthy oxyd of lead, carbonate of lead, sulphuret of antimony, black oxyd of manganese, native copper, sulphate of copper.

Saline Substances.—Nitrate of potash, muriate of soda, sulphate of magnesia, native alum.

Inflammable and Miscellaneous Substances.—Sulphur, stone-coal, pumice, madrepore, graphite.

Earthy Substances.—Chalk, flint, horn-stone, rock, crystal, novaculite, common quartz, citrine, radiated quartz, red ferruginous quartz, granular quartz, tabular quartz, hoary quartz, steatite, mica, chalcedony, reddle, yellow earth,

opalized wood, agate, mineral, plastic white clay, fuller's earth, stalactite, stalagmite, pudding stone, opal, jasper, agatized wood, carnelian, sulphate of lime, feldspar, calcareous spar, basanite, bulbstone, onyx agate, greenstone porphyry, schorl, ochre, shale.

To the above may be added carbonate of lime, in form of limestone, and marble.

The lead mines of Missouri are principally in the city of Washington, but there are also diggings in St. Genevieve, Madison, and Jefferson counties.

The ore is that species called galena, by mineralogists; the sulphuret of lead, of chemistry. The ore yields about 80 per cent. pure lead. The mass seems inexhaustible, but very irregularly disposed, the veins having no stratification, but branch through the other substances in every direction, and of an indefinite thickness. Taken as a whole, the lead district of the state of Missouri is the richest in the production of that metal of any ever discovered.

The lead mines of the state of Missouri deserve some historical notice, from their immensity and national importance.

The West Company was formed by letters patent under the regency of the Duke of Orleans, during the minority of the King of France, Louis XV., dated the 23d of August, 1717, and enregistered the 6th of September following.

Under this company, came out to Louisiana in 1719, Philip Francois Renault, son of Philip Renault, a noted ironfounder at Consobre, near Manberge, in France.

In 1720, Renault and one of his associates, a M. Lamotte, discovered the respective mines which bear their names.

Renault worked the mines extensively, but was in the end obliged to abandon the undertaking, from some fiscal arrangements in France, and returned to his native country in 1742. From that period until 1797, or during the long period of 55 years, no attempts of any consequence were made to smelt lead in these neglected mines.

In 1797, a Moses Austin, Esq. from Wythe city, in Vir., made a journey to the lead mines in Louisiana, and obtained a patent from the Spanish authorities for one league square, in consideration of erecting a reverberatory furnace. This work was commenced in 1798. Mr. Austin sunk the first regular shaft for raising the ore.

In 1799, this gentleman erected a shot tower, and made shot of approved quality. The latter work was erected under the superintendence of Elias Bates. Since the foregoing period, the lead mines have continued to attract public attention, and have been extensively worked. When Mr. Schoolcraft visited this tract in 1818, he enumerated 45 diggings.

What is now the state of Missouri formed a part of Louisiana, and has underwent the political revolutions of that country, and was amongst the first parts that the French discovered. In 1674, two missionaries, by the names of Jolliet and Marquette, entered the Mississippi by the route of Ouisconsin, descended the former stream to the Arkansas, and returned to Canada by the Illinois. The country was visit-

ed by M. de la Salle, in 1683. Some settlements were made soon after in the respective regions now comprised in the state of Illinois and territory of Arkansas, but none in any part now within the state of Missouri.

In 1762, all Louisiana was ceded by France to Spain, and possession taken in 1769.

Upper Louisiana, now state of Missouri, began to be peopled about 1760. The attempt of settlement at the mines by Renault, and its failure, we have seen. In 1762, the present town of St. Louis was commenced, since which period settlements have gradually, but during the existence of the Spanish government, slowly advanced. In 1803, this country, with all Louisiana, was ceded to the United States; and, early in 1804, was taken possession of by Major Amos Stoddard.

Louisiana was divided into two territories, that of Orleans below N. lat. 31°, and Louisiana, containing the residue of that country. New Orleans continued the capital of Orleans, and St. Louis of Louisiana.

In 1810, the then territory of Louisiana contained 20,485 inhabitants, of which 3011 were slaves.

In 1812, when the territory of Orleans became the state of Louisiana, Louisiana territory was changed to the territory of Missouri, and, on the 4th of January, 1813, Mr. Edward Hemstead took his seat in Congress, as delegate. April 3d, 1818, the bill for the admission of Missouri into the Union, as a state, received a second reading, and was committed.

On this bill being brought up for a third reading, its passage was opposed, unless under condition of prohibiting the introduction of negro slaves. This opposition defeated the bill in the session of 1818-19, and in the session of 1819-20, both of which, particularly the latter, was in great part consumed in debates on the subject.

In the former session, March 5th, 1820, an act was passed permitting the people of Missouri to elect a convention, which was empowered to frame a constitution, and adopt such name as they should choose, and under such constitution, when approved by Congress, such a state to become one of the United States, with all the rights and immunities appertaining to the original states.

The convention of Missouri met at St. Louis, — 1820, and formed a constitution, which was presented to Congress for approval, at the opening of the session of 1820-21. A clause in the constitution, excluding from the state free negroes and people of colour, gave rise to a long and violent debate in both houses, which eventuated in a resolution of Congress, dated March 3d, 1821, in the following terms:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That Missouri shall be admitted into this Union on an equal footing with the original states, in all respects whatever, upon the fundamental condition, that the fourth clause of the twenty-sixth section of the third article of the constitution submitted on the part of said state to Congress, shall never be construed to authorize the passage of any law, and that no law shall be passed in conformity

hereto, by which any citizen of either of the States of this Union, shall be excluded from the full enjoyment of the privileges and immunities which such citizen is entitled under the Constitution of the United States: *Provided*, that the Legislature of the said state, by a joint resolution, shall declare the assent of the said state to the said fundamental condition, and shall submit to the President of the United States, before the fourth Monday in November next, an authentic copy of the said act, upon a receipt whereof, the President, by proclamation, shall announce the fact, whereupon, and without any further proceeding on the part of Congress, the admission of the said state into this Union, shall be considered as completed."

The Legislature of Missouri, on the 26th of June, 1821, passed an act of accession to the conditions contained in the foregoing resolution of Congress, and transmitted the act to the President of the United States, who, on the 10th day of August, 1821, issued his proclamation pursuant to the tenor of the resolution of Congress, and the accession of the Legislature of Missouri to its provisions, and Missouri became a state of the United States.

It may not be uninteresting to trace the line, which, by the act of admission of Missouri, bounds the slave holding from the non-slave holding states and territories that have been, or may be formed beyond the Mississippi. Beginning on the right bank of that stream, at the mouth of Ohio, and following the boundaries of the state of Missouri up the Mississippi and Leifmore rivers, and thence to the S.W. angle of Missouri, on the N. boundary of the Arkansas territory, at N. lat. 36° 30', and thence due W. to the frontier line between the United States and Spain.

Civil and political subdivisions of Missouri, with the result of the census of 1820, annexed.

The extent and relative pop. of Missouri, can be only vaguely calculated, as the outlines and respective area of the cities, remain unascertained to any approach to accuracy. The foregoing table will exhibit, however, the general extent, it is presumed, sufficiently correct for ordinary purposes.

The lines of settlement in Missouri run chiefly along or near the water courses, and if the one-tenth part of the entire area is assumed for the surface actually under culture, I am led to believe, will be an ample estimate. This would yield 6287, or in round numbers, 6300 sqms. and with a pop. a little exceeding 10 to the sqm.

By the census of 1820, the people of Missouri were found to be composed of 35,983 whites; 376 free coloured persons; and 10,220 slaves, and classed thus

In the number employed in manufactures, it is probable are included about 1100 persons employed in the lead mines.

Mistra, or *Mistira*, village of Greece, in the Moree, supposed, though erroneously, to be on the site of Sparta. According to Chateaubriand and Poqueville. Mistra is situated one and a half ms. from the ruins of Sparta, and on the W. side of the Eurotas, (now Vasilopotamos river, or brook.) Mistra contains a pop. of 15,000, one third Mahometans, the residue Greeks, and Jews.

Mutham, village of Eng. in Surry, seated on the Wandie, on which are some snuffmills, and two calico printing manufactures. It is 8 ms. SW. of London.

Mittau, strong town of Poland, the capital of Courland, remarkable for its large ducal palace. It is situated on the Bolderau, 45 ms. E. of Goldingen, and 270 NNE. of Warsaw. Lon. 23° 30' E., lat. 56° 40' N.

Mobile, river of the U. S., in the State of Al., is formed by the united streams of Tombigbee and Alabama rivers. The extreme NW. source of Tombigbee are in the state of Miss., near the S. line of Ten., from whence the different branches flow SE. into Al., where, uniting, they form the Tombigbee, which flows nearly due S. to its junction with the Alabama, at N. lat. 31° 5'. The Tombigbee receives, besides many lesser confluent, the Tuscaloosa, or Black Warrior, a large stream from the NE. The entire length of the Tombigbee is about 30 ms., by comparative course.

The Alabama is formed by the united streams of the Coosa and Tallapoosa, which both rise in Geo., and flowing to the S.W., unite at N. lat. 32° 23', and from thence to the junction with Tombigbee assumes the name of Alabama. The entire length of the Alabama, from the sources of the Coosa to the head of the Mobile river, is, by comparative course, about 400 ms. A considerable branch from the N., called the Cahaba, enters the Alabama about 100 ms., by the windings of the stream, below the junction of the Coosa and Tallapoosa. Cahaba, the seat of government for the state of Al., is situated at the mouth of the Cahaba river.

The river Mobile is about 40 ms. in length, from the head of Mobile bay to the junction of Tombigbee and Alabama rivers. Within a very short distance of its head, the Mobile divides into two branches, that of Mobile proper to the W., and Tensaw to the E. These never again unite, but flow separately into Mobile bay, with several inlets from one to the other. The stands enclosed between the main branches and the inlets are, in general, liable to inundation.

The Mobile river admits vessels of 12 feet draught in all its length; the Tombigbee, those of 5 feet to Fort Stoddart, and Mobile, those of about 6 feet to fort Claiborne.

Mobile Bay, opens below the mouth of the Mobile and Tensaw rivers, and gradually widens from 1 to 10 or 12 ms., and, extending 50 ms. nearly S., again contracts to about 5 ms., having Dauphin Island in nearly the middle of its entrance into the Gulf of Mexico. The main channel, between Dauphin Island and the Point of Mobile, has a depth of 13 feet. The channel between the main shore and Dauphin Island, known by the name of the Pass au Heron, has only 5 feet. A bar of 13 feet water crosses Mobile bay 3 ms. below the town of that name.

Mobile Point, is a long, low, sandy and narrow peninsula, which bounds Mobile bay on the S., extending from the bay of Bon Secours, the southeastern extremity of the former, towards Dauphin Island, which it approaches to within 5 ms. This point has been rendered remarkable, by the erection of a military post on its extreme W. extension, called *Fort Bowyer*.

This fort was attacked, September 15th, 1814, by a British squadron, consisting of two vessels of 28 guns each, and one of 18 guns, with a land force of 200 Indians, and 110 marines. The British were repulsed, with the loss of the *Hermes*, and about 100 men killed and wounded.

After their defeat at, and retreat from New Orleans, the British attacked and took Fort Bowyer, on the 15th of February, 1815.

Mobile Town, is situated on the W. or right shore of Mobile bay, near the mouth of Mobile river, upon a bank elevated 18 or 20 feet above the surface of the water in the bay. Mobile contains about 200 houses and 1000 inhabitants. It is a place of considerable trade, though the entrance to the harbour is inconvenient for vessels drawing more than 8 feet water. A long, narrow, and low island lies before the town, and extends about 5 ms. above, round which large vessels are obliged to pass in order to reach the harbour, in which any vessel can enter in safety which can pass the bar, 3 ms. below the island.

Mobile is situated at N. lat. $30^{\circ} 44'$, and W. lon. from W. C. $10^{\circ} 35'$, and from Greenwich, $87^{\circ} 35'$.

Mobile, cty. Al., bounded by the Gulf of Mexico S., Mississippi W., Baldwin and Monroe cties in Al. N., and West Florida E. Length 58 ms., mean width 45; area 2600 sqms. It occupies that part of Al. S. from the 31° N. lat. and between the state of Mississippi and territory of West Florida. Surface generally level or moderately hilly. Soil with but very partial exceptions barren, and covered with pine tim-

ber. Chief towns, Mobile and Blakeley. Pop. 1820, 2672. Cl. lat. $30^{\circ} 42'$ N. lon. W. C. $11^{\circ} 2'$ W.

Mocanpau, town of the country of Napaul, capital of a district of the same name. It is situated on the E. side of the Napaul, 48 ms. SSE. of Catmandu, and 150 N. of Patna. Lon. $85^{\circ} 37'$ E. lat. $27^{\circ} 35'$ N.

Mocha, small island off the coast of Chili. Lat. $38^{\circ} 31'$ S. lon. W. C. $52^{\circ} 10'$ E.

Mocha, or *Moka*, town of Arabia, in Yemen, seated on a small bay of the Red Sea, near the strait of Babelmandel. On each of the points of land, which enclose the road, is a fort; but they are wretched structures. The town is of a circular form, surrounded by a wall, in which are six gates. It carries on a great trade, especially in coffee; and the inhabitants are estimated at 18,000, without including the Jews, who inhabit the suburbs. The English, from Hindoostan, at present engross almost exclusively the trade of this place. It stands in a barren plain, 140 ms. SSW. of Sane, and 630 SSE. of Mecca. Lon. $44^{\circ} 25'$ E. lat. $13^{\circ} 10'$ N.

Moclsville, pstv. Rowan cty. N. C., by psird. 190 ms. W. from Raleigh.

Moderbury, town of Eng. in Devonshire, with a manufacture of plush; seated between two hills, 36 ms. SSW. of Exeter, and 208 WSW. of London.

Modena, or *Modenese*, a duchy of Italy, 65 ms. long, and 55 broad, bounded on the W. by Parma, N. by Mantua, E. by the Ferrarese, Bolognese, and Tuscany, and S. by the republic of Lucca. It includes the duchies of Mirandola and Reggio. The soil is fertile in corn, wine, and fruits of different kinds. It also feeds a great number of cattle.

Modena, fortified city of Italy, capital of the Modenese, with a magnificent college. The ducal palace is richly furnished, and contains fine paintings. The inhabitants are estimated at 30,000. It is seated between the rivers Secchia and Panaro, 34 ms. S. by E. of Mantua, and 60 N.W. of Florence. Lon. $11^{\circ} 12'$ E. lat. $44^{\circ} 31'$ N.

Modok Town, pstv. Accomack cty. Virg.

Modica, town of Sicily, in Val di Noto, on the river Accellaro, 10 ms. W. of Noto.

Modon, strong town of European Turkey, in the Morea, with a safe harbour. It is seated on a promontory projecting into the sea of Sapienza, 15 ms. W. of Coron. Lon. $21^{\circ} 31'$ E. lat. $36^{\circ} 53'$ N.

Moes, See *Mores*.

Moersburg, town of Suabia, in the principality of Furstenburg, 18 ms. N. of Constance.

Moffat, town of Stld. in Dumfriesshire, near the river Annan, encompassed on all sides, except the S., by hills of different heights. Its delightful situation, and its mineral springs attract much company. It is 20 ms. N. by E. of Dumfries.

Moffat Hills, the highest mountains of the S. of Stld., on the N. border of Dumfriesshire. Hartel, the most elevated, is 2300 feet above the level of the sea. They feed numerous flocks of sheep, and from them descend, in different directions, the Tweed, Clyde, and Annan, whose sources are but little distant from each other.

Mogot's Mill, pstv. Randolph cty. N. C., 85 ms. W. from Raleigh.

Moffitt's Mill, psto. Pendleton district, S. C., 172 ms. NW. from Columbus.

Moffitt's Store, psto. Columbia city, N. Y.

Mogador, town of the kingdom of Morocco, with a harbour for vessels of a middling size. It is surrounded by walls, with batteries, and at high tides is almost encompassed by the sea. The streets are all in straight lines, and contain a great number of handsome houses. The port is formed by a channel between the mainland and an island above a mile in length. It is 180 ms. WNW. of Morocco. Lon. $9^{\circ} 35'$ W. lat. $31^{\circ} 28'$ N.

Mohacs, town in Lower Hungary, in the city of Buranwar, at the conflux of the Corasse with the Danube, 23 ms. N. by E. of Esseck.

Mogrebhins, or *Magrebi*, "people of the west," terms by which the Arabs and Moors of western Africa are known in Mahometan Asia.

Mohawk, river of N. Y., the great western branch of the Hudson. The extreme north-western source of the Mohawk is in Lewis city. It thence enters Oneida city, flows S. 20 ms. to Rome, where it turns to SE. about 23 ms. by comparative courses, to its first northern confluent West Canada. Here it assumes nearly an eastern course of 5 ms., to its passage through the Katsbergs, at the Little falls. It is precipitated at this place over a ledge of rocks. See article *New York*, section, Grand Western Canal. Below the Little Falls, the Mohawk flows, by comparative courses, 70 ms. SE. by E. to its junction with the Hudson at Waterford. Two ms. above Waterford, it is again precipitated over the Cahoes rocks by a single pitch of 70 feet. The Mohawk, besides West Canada, receives from the N. East Canada, Chucktananda, and some others of lesser note; and from the S. Oriskany creek, and Scholatie river. Its entire comparative course, 123 ms. It passes the villages or towns of Rome, Utica, Herkimer, Little Falls, Oppenheim, Palatine, Canajoharie, Caughnawago, Amsterdam, and Schenectady. Its banks generally rise by an acclivity of more or less inclination, but in some places, as at Schenectady, Herkimer, Utica, and Rome, meanders through extensive alluvial flats. The soil in most places, particularly that of the flats, highly fertile and well cultivated. The great Western Canal has been formed along its right shore from opposite Waterford to Rome.

Mohawk Bay, in Fredericksburgh, U. C., bay of Quinte, lies opposite to the Mohawk settlement, and close to the mouth of the river Appanance.

Mohawk Settlement, bay of Quinte, U. C., is W. of Richmond, and comprehended between the river Shannon and Bowen's Creek.

Mohawk, village on the Grand River, or Ouse, U. C., is the principal village of the Six Nations. This is the residence of their principal Chief, Captain Joseph Brant. The village is beautifully situated, has a neat church with a steeple, a school house, and a council house; and not far from it is a grist and saw mill.

Mohegan, village of U. C., on the right bank of the Thames, $\frac{1}{2}$ ms. below Norwich. Here reside the remnant of the Mohegans.

About 5 ms. below the mouth of the Beraun it passes the city of Prague, and joins the Elbe above Melnick, 20 ms. below Prague. The Moldau drains more than half of all Bohemia. See *Muldau*.

Moldau, or *Sereth*, river, rises in the Carpathian mountains, in the Austrian province of Bukowine, and flowing SE. falls into the Danube, above the mouth of the Pruth. The Moldau gives name to Moldavia.

Moldavia, province of Turkey in Europe, 270 ms. long, and from 30 to 120 broad, bounded on the N. by Poland, from which it is also divided on the NE. by the Dniester, E. by New Russia and Bessarabia, SE. by Bulgaria, from which last it is parted by the Danube, SW. by Wallachia, and W. by Transylvania. The other principal rivers are the Pruth and Sereth. The W. part is mountainous, and there are

some uncultivated deserts; but it abounds in good pastures, which feed a great number of horses, oxen, and sheep; it also produces corn, pulse, honey, wax, fruits, with plenty of game and fowls. The sovereign, who is styled hospodar, is tributary to the grand seignior. The inhabitants are Christians of the Greek church. Jassy is the principal town.

Mole, river of Engg. Surry, which rises on the borders of Sussex, flows N. to Dorking, and passing beneath Box Hill, is said to disappear in its vicinity, and to rise again near Leatherhead. Hence it is supposed to drive its name; but the fact is, that a tract of soft ground, 2 ms. in length, called the Swallows, in very dry seasons absorbs the waste water in caverns on the sides of the banks; but not so as to prevent a constant stream from flowing in an open channel above ground. The Mole, proceeding from Leatherhead to Cobham, enters the Thames, opposite Hampton Court.

Mole, port of St. Domingo. See *Nicholas*, St.

Molfetta, town of Naples, in Terra di Bari, seated on the Gulf of Venice, 10 ms. W. by N. of Bari.

Mongul's Country of the, or Western Chinese Tartary, is bounded on the N. by Siberia, E. by Eastern Tartary, S. by the Great Wall of China and Lea-tong, and W. by Independent Tartary. The Mongul Tartars have neither towns, villages, nor houses; they wander in hordes, and live under tents, which they remove from one place to another, according as the temperature of the different seasons, or the wants of their flocks require; they pass the summer on the banks of rivers, and the winter at the foot of some mountain or hill which shelters them from the piercing N. wind. The Monguls are nominally subject to China, but in reality are a free nomadic race. They have been very improperly, by European writers, confounded with the Mandshurs and Tartars, from both of whom they differ essentially, in language and manners. See *Mandshuria*.

Monheim, town of Bavaria, in the principality of Neuburg, 8 ms. N. of Donawert.

Monkenladuff, seaport of N. Holland, which has manufactures of soap and silk. It is seated on a gut or frith of the Zuider Zee, 8 ms. NE. of Amsterdam. Lon. $4^{\circ} 38' W.$ lat. $52^{\circ} 28' N.$

Monkton, pstv. and tp. Addison cty. Ver., 23 ms. S. of Burlington. Pop. 1250.

Monmouthshire, cty. of Eng., 24 ms. long, and 20 broad; bounded on the N. by Herefordshire, E. by Gloucestershire, SE. by the mouth of the Severn, and W. and SW. by the cties. of Brecknock and Glamorgan. It contains 340,000 acres; is divided into six hundreds and 127 parishes, has 7 market towns, and sends 3 members to parliament. Beside the Wye, which parts it from Gloucestershire, the Minnow, which separates it from Herefordshire, and the Rhyney, or Runney, which divides it from Glamorgan-shire, this cty. has, almost peculiar to itself, the river Usk, which divides it into two unequal portions. Pop. 1801, 45,582; in 1811, 62,137; and in 1821, 71,835.

Monmouth, borough of Eng., capital of Monmouthshire, at the mouth of the Minnow, which here joins the Wye. Over the former is a very ancient bridge and gateway, once a barrier against the Welsh. It is 18 ms. S. of Hereford, and 120 W. by N. of London. Lon. $2^{\circ} 46' W.$ lat. $51^{\circ} 49' N.$

Monmouth, pst. Kennebec cty. Maine, 17 ms. W. from Augusta. Pop. 1820, 1590.

Monmouth, cty. N. J.; bounded on the E. by the Atlantic Ocean, SW. by Burlington, and NW. by Middlesex, and N. by Raritan Bay; length 60 ms., mean width about 18, and, exclusive of water, about 1000 sqms. in surface. Its form triangular, and in one part, from Wreck Pond to Allentown it is 30 ms. wide. Surface in the western and northern part undulating, but towards the ocean level. Soil of middling quality, though in places extremely productive. A very remarkable marl zone crosses this cty. in a direction from NNE. to SSW. Chief town, Freehold. Pop. 1820, 25,038. Ctl. lat. $40^{\circ} 5' N.$ lon. W. C. $2^{\circ} 42' E.$

Monmouth. See *Freehold*.

Monocacy, small but fine river of Penn., and Md. It rises in Adams cty. of the former state and enters Potomac in Frederick cty. of the latter. It drains near one half of Adams, and almost the entire surface of Frederick cty.; comparative length about 30 ms.

Monomotapa, kingdom on the E. coast of Africa, bounded on the N. by Monomugi, on the E. by the Mosambique, on the S. by Sofala and Manica, and on the W. by unknown regions. It is watered by several rivers, of which Zambeza is the chief. It lies between 23° and $33^{\circ} E.$ lon. and 14° and $19^{\circ} S.$ lat.

Monomugi, kingdom of Africa, lying near the equator, between Abyssinia on the N., Zanguebar on the E., Monomotapa on the S., and Congo on the W. This country is very little known to the Europeans.

Monongahela, river of the U. S., rises in Randolph cty. Virg., interlocking with the sources of the Great Kenhawa, at N. lat. $38^{\circ} 30'$. Its course is nearly S. 80 ms., to where it receives the W. branch, from Lewis and Harrison cties. Below their junction, the united stream flows

S.E. 30 ms. to the S. boundary of Penn., which it passes, and 2 ms. lower receives from the SE, Cheat river, little, if any, inferior in column or length to the Monongahela itself. Cheat river rises in Randolph cty., and flows through that and Monongahela cties., enters Penn., and unites with the main stream as before noticed. The sources of the Monongahela and Cheat are in the western spurs of the Appalachian mountains. Below the mouth of Cheat, the Monongahela flows nearly S. 30 ms., to its junction with the Youghiogheny. The latter rises in the Appalachian mountains, in Alleghany cty. Md., interlocking with the sources of the N. branch of the Potomac, flows N. into Penn.; passing through Fayette, Westmoreland, and entering Alleghany cty., unites with the Monongahela at McKeesport, after a comparative course of about 100 ms.; 12 ms. below its junction with Youghiogheny, the Monongahela unites with the Alleghany, and forms the Ohio, at the city of Pittsburgh. The entire length of the Monongahela river, by comparative courses, is about 170 ms., but following the meanders of the streams, either along the main or Cheat branch, the length exceeds 200 ms.

The country drained by the Monongahela, is in some parts mountainous and in all hilly.

For down stream navigation, the Monongahela at high water, is passable with large boats as high as the mouth of the W. branch, and by lighter vessels much higher. Cheat river is navigable into Randolph cty., about 50 ms. by comparative course above its mouth, and the Youghiogheny to the Ohiopyle falls, in Fayette cty., 60 ms. above its junction with the Monongahela.

The various branches of the Monongahela, which derive their sources from the western chains of the Appalachian system, similar to the Potomac, claim a more than ordinary share of attention, as presenting the connecting links of a proposed line of canal improvement. Cheat river flows from the northwestern slope of Alleghany mountain, and draining the eastern part of Randolph cty., passes Chesnut Ridge, enters Preston cty., and there a navigable stream, continues N. to within 5 ms. from the S. boundary of Penn.; turning to the W. through Laurel Hill, and thence NW., crosses the S. line of Penn., and unites with Monongahela.

Monongalia, or Monongahela, cty. of Virg.; bounded N. by Penn., E. by Preston cty., Virg., S. by Sandy creek or Randolph cty., SW. by Monongahela river or Harrison, and W. by Tyler; length 33 ms., mean width 20; area 600 sqms. Surface generally extremely hilly, and in part mountainous. The river alluvion and some of the soil of the hills highly fertile. The Monongahela and Cheat unite in the lower part of the cty., and both streams traverse it obliquely. Chief town Morgantown. Pop. 1820, 11,060. Ctl. lat. $39^{\circ} 30'$ N. lon. W. C. $3^{\circ} 5'$ W.

Montgomery, pst. and tp. Franklin co. Ver., 40 ms. NE. from Burlington.

Montgomery, tp. Hampden co. Mass., 12 ms. NW. from Springfield. Pop. 1820, 603.

Montgomery, co. N. Y., bounded by Schenectady, SE., Schoharie S., Otsego SW., Herkimer W., Hamilton N., and Saratoga E. Length and breadth would average about 30 ms. each; area 900 sqms. This is a very richly diversified co. The Mohawk meanders through it, dividing it into two unequal sections, leaving about one-third part S. from the river. East Canada creek enters the Mohawk from the N., and for a distance of nearly 15 ms. forms the boundary between Montgomery and Herkimer coes. The Schoharie river enters at the SE. angle, and flowing nearly N., falls into the Mohawk, opposite Tripes Hill. The NE. angle of this co. is watered by the Sacandaga branch of the Hudson. Except the alluvial plains near the Mohawk, this co. is generally hilly, but rising in most instances, particularly S. from the Mohawk, by a not very abrupt acclivity; the slopes are arable to the summits. The soil partakes of the variety of the surface, presenting every transition from the highly fertile banks of the Mohawk, Schoharie, and other streams, to eminences, rocky, and of course sterile. Staples, grain, flour, live stock, &c. Chief town, Johnstown. Pop. 1820, 37,569. Ctl. lat. 43° N. lon. W. C. $2^{\circ} 36'$ E.

Moravian Village, U. C., on the river Thames, is in the 4th tp. from its mouth. It is a regular built village, of one street, with indifferent wooden huts, and a small chapel, inhabited by Indians converted to the Moravian faith, and their pastors. Respecting this village and its inhabitants, an intelligent friend writes thus.

"I crossed the Thames at the Moravian town, 75 ms. from Detroit, and spent the night there with 2 Moravian missionaries, from Bethlehem and Nazareth. I think they are governed by very different motives from those which influence mercenary preachers. They tell me they have more hopes of Christianizing, than of civilizing the Indians. One of these men teaches the males, the other the females. There are about 160 of both sexes, and all ages at this place. They express no desire to exchange the native habits of savages, for those of civilized life, nor do they inspire a hope in any place where I travel, that the labours for their civilization and reformation will avail anything, but to accelerate their destruction." Aug. 23d, 1822.

Morava, or *Moraw*, river of Germany, which has its source on the confines of Bohemia and Silesia. It crosses Moravia, where it waters Olmutz and Hradisch, and receiving the Teya, from the confines of Lower Hungary and Upper Austria, separates these two countries as far as the Danube, into which it falls.

Morava, river of Turkey in Europe, which rises in Bulgaria, and running through Servia, by Niag, falls into the Danube, at Semendriah.

Moravia, marquisate annexed to Bohemia, by which it is bounded on the W., by that king-

dom and Silesia on the N., by Silesia and Hungary on the E., and by Austria on the W. It takes its name from the river Morava, which runs through it; and hence the sect of Christians, called Moravians, take their name, their doctrines having been first taught here. Olmutz was the capital, but now Brinn claims that honour.

Moravia is a province of the Austrian empire, including Moravia Proper, and Austrian Silesia, which has been annexed to it. Moravia Proper contains 8860 sqms., and 1,334,000 inhabitants; and Austrian Silesia 1840 sqms., and 347,000 inhabitants. The six circles of Brun, Olmutz, Hradisch, Prerau, Znaim and Iglaui, form Moravia Proper, while Austrian Silesia is divided into the circles of Teschen and Troppau. The following is the population of the principal towns.

| | | | |
|-------------|--------|-------------|-------|
| Brun, | 26,000 | Teschen, | 5,400 |
| Olmutz, | 11,000 | Znaim, | 5,200 |
| Iglaui, | 11,000 | Grünitz, | 3,200 |
| Troppau, | 10,000 | Falkenberg, | 3,100 |
| Sternberg, | 8,000 | Prerau, | 2,900 |
| Nicolsberg, | 7,600 | Hradisch, | 1,700 |

Moravia is intersected by several ranges of mountains, between which are many fertile valleys, and in the N. and S. there are well cultivated plains of considerable extent. The principal river is the March, or Morava, which is navigable, and after receiving the Teya, runs S. and falls into the Danube above Presburg. This province is not remarkable for its vegetable productions. Corn and flax are raised, but not in great quantities. Hogs and geese are exported in great numbers. Gold and silver mines were formerly wrought to some considerable extent, but at present, the most productive minerals of Moravia are those of iron and lead. Coal exists in large bodies, but has not been excavated in proportion.

Moravia presents manufacturing establishments on an extensive scale. Woollen, cotton, and linen goods are made in great amount. About 40,000 pieces of woollen goods are annually produced in the neighbourhood of Iglaui. The number of persons in all Moravia, employed in the woollen manufactures is 16,000 weavers and 24,000 spinners. Thread is made at Rothwasser, and dyeing is extensively carried on at Brun. The cotton works at Lattowitz, give employment to 1000 individuals. Leather, paper, potash, and glass, are also manufactured in this province. Imports are wool, silk, flax, cotton, oil and grain.

Morvea, ancient Peloponnesus, a large peninsula of southern Europe. In ancient times this country was subdivided into Laconia S.E., Messenia S.W., Elis W., Achaia NW., Sicyonia and Corinthia NE., Argolis E., and Arcadia in the centre. No part of Europe presents a more richly variegated aspect. One scene of river or mountain grandeur succeeds another, under a serene and benignant sky. Though mountainous, its valleys are generally composed of a most productive soil. But this beautiful country has been for a long period, blasted by the despotism of the Turkish government.

Peloponnesus, or Morvea, is from the Promontory of Malea, the south-eastern extremity of Laconia, to Rhium, in the NW. part of Achaia, about 140 ms. in length. Between the Cheloniotes (now Cape Tornese) and SchyMacum (now Skilleo) the breadth is 120 ms. The whole peninsula is so very much indented with deep bays, as not to average, it is probable, above a mean width of 50 ms. area about 7660 sqms., including the small surrounding islands. The modern pop., as enumerated by Poqueville, amounts to 400,000 Greeks, and 20,000 Turks, Jews, and Albanians. Chief towns, Patras, Corinth, Napoli-di-Romania, Corin, and Tripolizza. The Morea lies between lat. $36^{\circ} 22'$ and $38^{\circ} 18'$ N.

Morlachia, mountainous country in Hungarian Dalmatia, the inhabitants of which are called Morlacks, or Morlacchi. They inhabit the pleasant valleys of Koter, along the rivers Kerka, Cetina, Narenta, and among the inland mountains of Dalmatia. They are said by some to be of Wallachian extraction; but others think their origin involved in the darkness of barbarous ages. The Morlacchi are so different from the inhabitants of the sea coasts in dialect, dress, disposition, and customs, that they seem nearly to be of a different original.

Morlaix, considerable seaport of France, in the department of Finistère, and late province of Bretagne, with a castle, and a tide harbour. The church of Notre-Dame is a singular structure, and the hospital very handsome. The inhabitants carry on a considerable trade in linen, hemp, and tobacco. It is seated on a river of the same name, 30 ms. NE. of Brest. Lon. $3^{\circ} 46'$ W. lat. $48^{\circ} 33'$ N.

Morocco, empire of Africa, comprehending a considerable part of the ancient Mauritania, lying between 28° and 36° N. lat. It is bounded on the W. by the Atlantic, on the E. by the river Mulvia, which separates it from Algiers, on the N. by the Mediterranean, and on the S. by Mount Atlas. Its greatest length from NE. to SW. is above 590 ms., and where widest, not more than 260 broad. This empire contains the kingdoms of Sus, Tarudan, Morocco Proper, Tassilet, Suqqnessa, Fez, and Mequinez. The air of this country is pretty pure and temperate, especially near Mount Atlas. The soil, though sandy and dry in some places, is so fertile in others, and the fruits, as well as the pastures, so good, that it would be a delightful country, if it was well cultivated. The inhabitants are Mahometans, of a tawny complexion, robust, and very skillful in managing a horse, and wielding a lance; but they are jealous, deceitful, superstitious, and cruel. The pop. of this extensive region has been variously stated, but it cannot exceed, if it amounts to 10,000,000. Mogador is the only port in Mo-

rocco, which maintains any extensive connexion with Europe. It has three capital cities, Morocco, Mequinez, and Fez.

Morocco, one of the capital cities of the kingdom of Morocco, seated in a beautiful valley, formed by a chain of mountains on the N., and those of the Atlas on the S. and E. It has nothing to recommend it but its great extent, and the royal palace, which takes up so much ground that it resembles a small city. It is enclosed by strong walls, the circumference of which is 8 ms., they are flanked by square towers, and surrounded by a wide and deep ditch. The Jews have a market of their own, and live in a separate town, walled in, and shut up every evening at night, after which no person can enter or depart till next morning. Morocco is 90 ms. E. of Mogador, and 400 S. of Gibraltar. Lon. $6^{\circ} 45'$ W. lat. $31^{\circ} 12'$ N.

Moren, town of Spain, in Andalusia, seated in a pleasant, fertile plain. In its neighbourhood is a mine of precious stones. It is 30 ms. SE. of Seville. Lon. $5^{\circ} 10'$ W. lat. $37^{\circ} 10'$ N.

Morotas, one of the Sandwich Isles, 7 ms WNW. of Mowee. Yams are its principal produce; but it has little wood. The coast on the S. and W. sides forms several bays, which are tolerably sheltered from the trade winds. Lon. $117^{\circ} 14'$ W. lat. $21^{\circ} 10'$ N.

Morpeth, borough of Eng., in Northumberland. It is an ill built, straggling place, seated on the N. bank of the Wentsbeck, and on the opposite side is the church, and a castle in ruins. It sends two members to parliament, has a free-school, founded by Edward VI., and is 15 ms. N. of Newcastle, and 287 N. by W. of London. Lon. $1^{\circ} 28'$ W. lat. $55^{\circ} 15'$ N.

Morriches, pstv. Brookhaven, Suffolk co., N. Y., on the S. side of Long Island, 72 ms. E. from N. Y. See *Moriches*.

Morris, co. N. J.; bounded by Essex SE., Somerset S., Hunterdon SW., Sussex NW., and Bergen NE. Length 26, mean width 19 ms.; area about 500 sqs. The surface of this co. is very pleasantly variegated by hill and dale. It is drained by Rockaway, and other confluent of Passaic river, and also by some streams flowing S. into Harlem river. The NW. part is mountainous, but the features of nature become less rugged, advancing to the eastward. The Pompton, and Rockaway rivers unite and form the Passaic, on the eastern border of this co., 6 ms. above the celebrated falls of Passaic, at the village of Paterson. Soil productive in fruits, grain, and pasture. Chief town, Morristown. Pop. 1820, 2,368. Cil. lat. $40^{\circ} 53'$ N. lon. W. C. $2^{\circ} 28'$ E.

Morris, tp. Huntingdon co. Penn., on the left side of Frankstown branch, 12 ms. W. from Huntingdon. Pop. 1820, 802.

Mortay, island, the most northern of the Moluccas, subject to the Sultan of Ternate. It is 80 ms. in circumference, and thinly inhabited, but full of sago trees, which are cut by the people of Gilolo. Lon. $128^{\circ} E$. lat. $3^{\circ} N$.

Mortlach, village of Sild., in Banffshire, 6 ms. SW. of Keith.

Morven, pstv. Anson cty. N. C., by pstrd. 132 ms. SW. from Raleigh.

Morvedo, town of Spain, in Valencia; on the site of the ancient Saguntum, with the ruins of a Roman amphitheatre, &c. It is seated on a river of the same name, 15 ms. N. of Valencia.

Mossa, town of Arabia, in Yemen, 25 ms. N. by E. of Mocha.

Mosambique, strait or channel of the Indian ocean, between the E. coast of Africa and the island of Madagascar. It is narrowest in the middle, where it is 240 ms. over; and in this part, on the continent, is a kingdom, island, and city of the same name.

Mosambique, kingdom of Africa, on the E. coast, and in that part of the Indian sea which passes between the continent and the island of Madagascar. The capital is of the same name, situate on an island, chief of three islands that form a part of the kingdom. The largest, called Mosambique, is not more than 1 ms. in length, and half as much in breadth, and is about 2 ms. from the continent. The other two, called St. George and St. James, lie each side of it, facing the continent. The islands are

in general sandy, but in some parts produce citrons, oranges, and other fruits. The soil on the continent is luxuriant and fertile in rice, millet, fruits, pulse, roots, and other esculents; and it feeds vast quantities of cattle, large and small, particularly sheep with large tails. Here are wild beasts of various kinds, as stags, boars, and elephants, which last are so fierce and destructive, that the inhabitants are obliged to kindle large fires round their sown fields, to prevent their being devoured by them. The country is also rich in gold, which is washed down by the rivers in great quantities, and makes a chief part of its commerce. Ivory, ebony, slaves, and cattle, are likewise changed for European goods. The natives stand in awe of the Portuguese, who are only Europeans admitted into some of their ports, whence they export the commodities already mentioned, also silver, copper, and wax. The city of Mosambique is said to be very handsome, and the buildings well constructed, especially the churches and convents; and the fort, or castle, is about a musket shot from the city. The fort belongs to the Portuguese, who have generally a good garrison here, a well stored magazine, and a large hospital for sick sailors. Their ships always call here in going to the East Indies, and the harbour is so commodious, that whole fleets may anchor and provide themselves with all necessaries. Lon. $41^{\circ} 8' E$. lat. $15^{\circ} 5' S$.

Mosbach, town of Germany in the palatinate of the Rhine, with an elegant castle, seated on the Neckar, 25 ms. ENE. of Heidelberg. Lon. $9^{\circ} 21' E$. lat. $49^{\circ} 28' N$.

Mosburg, town of Germany, in Carinthia, 6 ms. NW. of Clagenfurt.

Mosburg, town of Bavaria, seated at the conflux of the Amber with the Iser, 9 ms. W. of Landshut.

Moscovy. See Russia.

Moscow, formerly a dutchy, but now a government of Russia; bounded on the N. by the government of Tver, E. by that of Great Volodimir, S. by the governments of Kaluga and Ktesan, and W. by those of Tver and Smolensko. It is a fruitful country, and produces abundance of excellent asparagus.

Moscow, city of Russia, capital of the government of Moscow, and formerly of the whole empire. Previous to the entry of the French, it was the largest city in Europe; the circumference within the rampart that enclosed the suburbs, being 20 ms.; but its population did not correspond with its extent. It contained within the ramparts 300,000 souls, and was the most populous city in the empire; notwithstanding the residence of the court was at Petersburg.

The general divisions of Moscow are the same as previous to the conflagration, in 1812. They were, 1. The Kremlin, which was in the central and highest part of the city, surrounded by high walls of stone and brick, 2 ms. in circumference. This division contained the ancient palace of the csars, where Peter the Great was born; also the cathedral with seven towers, beside other churches, the imperial palace, and the arsenal. 2. The Khamenod, which was much larger than the Kremlin; it contained the university, the printing-house,

and many other public buildings, with all the tradesmen's shops. The houses were mostly stuccoed or white-washed, and was the only street in Moscow in which the houses stood close to each other. 3. The *Bisnogorod*, or White Town, which ran round the two preceding divisions, took its name from a white wall, by which it was formerly surrounded. 4. *Semlalnogorod*, which environed all the other three quarters, and was so denominated from a circular rampart of earth by which it was encompassed. The last two divisions exhibited a grotesque group of churches, convents, palaces, brick and wooden houses, and mean hovels. 5. The *Sloboda*, or suburbs, which formed a vast exterior circle round all the parts already described, were invested by a low rampart and ditch. These suburbs contained, besides buildings of all kinds, orchards, gardens, corn-fields, much open pasture, and some small lakes, which give rise to the *Neghina*. The *Moskwa*, from which the city takes its name, flows through it in a winding channel, but, excepting in spring, is only navigable for rafts. It receives the *Yausa* in the *Semlalnogorod*, and the *Neghina* in the western extremity of the *Kremlin*; the beds of both these rivulets are nearly dry in summer. Moscow exhibited an astonishing degree of extent and variety, irregularity, and contrast; some parts had the appearance of a sequestered desert; others, of a populous town; some, of a contemptible village; others, of a great capital. The streets, in general, were very long and broad; some of them paved; others, particularly in the suburbs, were formed with trunks of trees, or boarded with planks like the floor of a room. The places of divine worship, including chapels, amounted to above 1500; of these, 484 were public churches, some built of brick, stuccoed or white-washed, but the greater part were of wood, painted red; some had domes of copper, others of tin, gilt or painted green, and many were roofed with wood. They were richly ornamented within, and the pictures of the saints were decorated with gold, silver, and precious stones. Moscow was the centre of the inland commerce of Russia; particularly that river communicates with the Volga; and also by a canal to the Don, which river communicates with the sea of Asoph. This city is 425 ms. SE. of Petersburg. Lon. $37^{\circ} 33'$ E. lat. $55^{\circ} 46'$ N.

Moscow, tp. Somerset co. Maine, 28 ms. N. from Norridgewock. Pop. 1820, 286.

Muscow, small village containing about 100 inhabitants, in the southern limits of Clermont (s. Ohio). It is situated on the N. bank of the Ohio river, 22 ms. southerly from Williamsburg, and 120 southwesterly from Columbus.

Moselle, department of France, including part of the late province of Lorraine. It takes its name from a river which rises in the Vosges; waters Epinal and Toul; receives the Meurte below Nancy, and passing by Metz, Thionville, and Treves, enters the Rhine at Coblenz. Metz is the capital.

Mosania, town of Persia, in the province of Khuzistan, 22 ms. SW. of Susser.

Moskon. See *Malestroogn*.

Mosquito Shore, country of New Spain, on the Atlantic Ocean, containing the eastern part of the provinces of Honduras and Nicaragua. In magnitude it exceeds Portugal; it is well watered by navigable rivers and lakes; abounds in fish, game, and provisions of all sorts; furnishes every necessary for raising cattle and stock; and clothed with woods producing timber for every purpose at land or sea. The soil is superior to that of the W. India islands; the climate is more salubrious; and the destructive ravages of hurricanes and earthquakes have never been known here. The *Mosquito* Indians are so situated between mountains and inaccessible mountains, and a sea full of rocks and shoals, that no attempts against them by the Spaniards, whom they mortally hate, could ever succeed. By a convention with Spain, in 1786, the English, in consideration of certain cessions on the coast of Yucatan, agreed to evacuate this country.

Moss, seaport of Norway, in the province of Agderhuys, at the mouth of a river of its name, on the E. side of Christians Bay. Here are many saw mills, and a large iron foundry. It is 28 ms. S. of Christians. Lon. $10^{\circ} 48'$ E. lat. $58^{\circ} 38'$ N.

Mosey Creek, psto. Jefferson co. Tenn., by pstrd. 190 ms. E. from Murfreesborough.

Moudon, one of the most ancient towns of Switzerland, capital of a valley of the same name, in the Pays de Vaud, and formerly of all that part of the country which belonged to the duke of Savoy. The ruins remained in the canton of Bern, rising in the castle of Lucens, built on the summit of a mountain. It was formerly called *Mundogium*. It is 12 ms. N. by E. of Lausanne. Lon. $6^{\circ} 38'$ E. lat. $46^{\circ} 41'$ N.

Mouh-len, or *Chen-yan*, capital of the country of the Manchew. It is built on an eminence, and walled in by walls 3 leagues in

circumference. It is 440 ms. NE. of Peking. L. n. 122° 45' E. lat. 41° 55' N.

Moulins, episcopal town of France, in the department of Allier, and late province of Bourbonnois. It has a bridge over the Allier on which it is seated, and takes its name from the great number of mills (moulins) that were formerly in its neighbourhood; and contains above 16,000 inhabitants. Its manufacture of cutlery is in great esteem. It is 30 ms. S. of Nevers. Lon. 3° 25' E. lat. 46° 34' N.

Moulins-Engilbert, town of France, in the department of Nièvre, and late province of Nivernois. It is situated at the bottom of the mountains of Morvan, and is 5 ms. SW. of Chateau-Chinon.

Moulton, province of Hindoostan Proper, bounded on the N. by Lahore, on the E. by Demr and Aginere, on the S. by Guzerat, and on the W. by Persia and Candahar. Its products are cotton, sugar, opium, galls, brimstone, &c. It was subject to the sicks; but its capital, Moulton, has been garriisoned by the king of Candahar, ever since 1799.

Moulton, one of the most ancient cities of Hindoostan Proper, capital of a province of the same name. It is of small extent for a capital, but strongly fortified, and has a Hindoo temple of great celebrity. The trade of Moulton has been greatly lessened on account of the river having been choked up. Here is a particular sect of Hindoos, called Catry, a tribe of warriors supposed to be the Cathari or Cathari, with whom Alexander waited on the banks of the Malli. Moulton is seated on one of the branches of the Indus, 210 ms. SW. of Lahore, and 310 SE. of Candahar. Lon. 70° 40' E. lat. 29° 51' N.

Moulton, town, corporate town of Eng., in Devonshire. In the reign of Edward I. N. and S. Moulton had the privilege of sending members to parliament, and was a royal demesne. It is governed by a mayor, and has a manufacture of serges, shalloons, and felt. It is seated on the Moul, 12 ms. NW. of Barnstable, and 17 W. by S. of London. Lon. 2° 55' W. lat. 51° 5' N.

Murray-Frith, considerable inlet of the sea, on the E. coast of Stld., between Tarbetness, in Ross-shire, on the N., and Borough Head, in Murrayshire, on the S.

Murrayshire, or **Clackathire**, Stld., is subdivided into Murray and Strathspey, and is bounded on the E. and SE. by the river Spey, which divides it from Banffshire, on the S. by Aberdeenshire and Invernesshire, on the W. by Invernesshire and Nairnshire, and on the N. by Nairnshire, and the Frith of Murray, being 30 ms. from E. to W., and nearly the same from N. to S. Its air is salutary, and the winter milder than any other part in the N. of the kingdom. The S. side is mountainous, but abounds with pasture, as the low country does with corn. Here are several woods of firs and oaks. The soil is generally fruitful, and produces the fruits ripe soon. Its principal rivers are the Spey, the Lossie, Nairn, and Findhorn, all of which, produce vast quantities of salmon. The chief towns are Elgin and Forres. Pop. 1801, 26,705, in 1811, 28,108, and in 1821, 31,162.

Muskingum, river of the U. S., in the state of Ohio. This stream is formed by 2 branches, Whitewoman's and Tuscarawas rivers. The former rises by a number of sources in Richland, Knox, and Wayne cties., interlocking with the head waters of Sciota and Sandusky, entering Ohio, and Vermillion and Black rivers, flowing into Lake Erie, passing through Coshocton cty., join the Tuscarawas river, at the town of Coshocton. The entire comparative length of Whitewoman's river, from its mouth to the extreme source of Armstrong's creek, in Richland cty., is about 70 ms., draining one of the most fertile tracts of land in the U. S.

The Tuscarawas river has its sources in Harrison, Columbiana, Stark, Portage, Medina, and Wayne cties., interlocking with those of Rocky river and Cayahoga, flowing into Lake Erie, and Great Beaver, entering Ohio. The Tuscarawas river, is 90 ms. in length from the town of Coshocton to its extreme source, in Medina cty.

Below the junction of Whitewoman's and Tuscarawas rivers, the united waters take the name of Muskingum, which flowing S. 8 ms., through Coshocton, receives from the E. Hill's creek, on the border of Muskingum cty. and continuing S. a little W. 23 ms. to Zanesville, receives Licking creek from the W. After be-

ing precipitated over a fall of about 7 feet, at Zanesville, the Muskingum turns SE. by S., and flowing 60 ms., enters the Ohio river at Marietta. Between Zanesville and its efflux into Ohio, the Muskingum river passes through Muskingum, Morgan, and Washington cties. This river is navigable with large batteaux to the falls below Zanesville; for boats of considerable size to Coshocton; and for small craft nearly to the source of the Tuscarawas. A canal has been projected to unite the latter stream to the head waters of Cayahoga, and by this channel unite the Ohio river to Lake Erie. A canal with locks, is already cut around the falls at Zanesville, opening a navigation into the centre of the state of Ohio.

The country drained by the sources of the Muskingum is generally level, but becomes more hilly, approaching the Ohio river. In point of climate, this river flows from N. lat. 41° 7' to N. lat. 39° 28'. The area it drains nearly circular, about 7850 sqms.

Muskingum, cty. Ohio; bounded on the N. by Coshocton, E. by Guernsey, S. by Morgan, and W. by Perry and Licking cties. It is 28 by 27 ms. in extent, and contains about 660 sqms. Its principal waters are the Muskingum and Licking rivers, Salt, Jonathan's or Moxahala, and Wakatomika creeks. In numerous places adjacent to and in the bed and valley of the Muskingum river, are extensive and almost inexhaustible beds of stone coal, which the people in the vicinity of Zanesville use as fuel. Surface of the cty. generally hilly and soil sterile. Pop. 1820, 17,824. Lat. 40° N. and lon. W. C. 5° W. intersect very near the centre of this county.

Mysore, country in the peninsula of Hindoostan, lying between the W. and E. ridges of the Gaus. It extends from 11° 30' to 15° N. lat. and in the N. part from 74° 55' to 78° 35' W. lon. but diminishes thence as it approaches the S. till it ends in a point. The N. side is extremely irregular and indented, and the middle part branches out above a degree beyond that to the E. The country is in general dry, rugged, mountainous, and barren; but there are

several rivers and mountain torrents, which by artificial means serve to water rice grounds, gardens, &c. In the forests are many elephants, and tigers are common. Oxen, buffaloes, and goats are numerous, and in the NE. part many sheep are bred; but horses and asses are few. The chief products are rice, cotton, pepper, cocoa and betel-nut, sugar cane, butter, and oil. The dominions of the rajah of Mysore are now divided into three great districts, Patank to the S., Nagara to the NW., and Chattrakal to the NE., so called from the three places where the chief officers are situate. The Patana district is by far the largest, and of itself a much greater extent of territory than ever before was subject to the Mysore family.

Mysore, fortified city of Hindoostan, capital of the country of the same name. It was ruined by the late two sultans; but since the English restored the ancient family in 1799, and made it the rajah's seat of government, a palace has been built, and its renovation will follow of course. Mysore is 10 ms. S. of Seringapatan. Lon. 76° 50' E. lat. 12° 15' N.

Nabijos, a nation of Indiana, said to reside between Santa Fe of New Mexico, and the Pacific Ocean. An account of this people appeared in the Nat. Int. of Sept. 14th, 1824, extracted

from the Missouri Intelligencer. From data there given, the Nabijos are far advanced above the savage state, have relinquished the wandering for the sedentary state of society, have ceased to be hunters, and have become farmers and manufacturers, evincing much skill in both pursuits. To give the true sound of this name in English orthography, it ought to be written *Nabijos*, as the Spanish has the power of the English A. If such a people does actually exist, they deserve to be better known.

Nablous, town of Asiatic Turkey, capital of a country which was the ancient kingdom of Samaria. It is the residence of a scheik, who farms the tribute to the pacha of Damascus. The soil of the country is fertile, and produces a great deal of corn, cotton, olives, and some silk. The inhabitants are such jealous Mahometans, that they will not suffer any Christians to remain among them. Nablous is 24 ms. N. of Jerusalem, and 90 SSW. of Damascus. Lon. 35° 34' E. lat. 33° 20' N.

Naco, town of N. America, in the province of Honduras. Lon. W. C. 10° 40' W. lat. 15° N.

Nanking, city of China, capital of the province of Kiangsi. It is the largest in China, being 17 ms. distant from the great river Yangtze-Chiang, to which canals are cut, so large that vessels may enter the town. It was formerly the imperial city, whence it is called Nanking, which signifies southern court; but since six grand tribunals have been removed to Peking, it is called Kiang-san in all public acts. The place is greatly fallen from its ancient splendour; for it had a magnificent palace which is quite destroyed, as well as many ancient monuments; and a third part of the city itself is desolate. The streets are narrow, but handsome, and well paved, and on each side are shops neatly furnished. The public buildings are mean, except a few temples, the city gates, and a tower of porcelain, 200 feet high. They have several manufactures in silk and wool. The number of inhabitants is said to be 1,000,000, without comprehending the garrison of 40,000 men. Here the physicians have their principal academy. The inhabitants were formerly estimated at 2,000,000, the city being above 30 ms. in circumference. It is situated on the Kiam, 500 ms. SSE. from Peking. Lon. $119^{\circ} 25'$ E. lat. $32^{\circ} 46'$ N.

Nantucket, island of N. America, in Mass. The inhabitants of which have a considerable whale fishery on the coast, and even in Greenland. It lies to the S. of Cape Cod, and is a low, sandy, barren island, the inhabitants depend almost entirely on the sea for their subsistence. It contains about 50 sqms., and forms a city with some small islands. The employment of capital marks the pursuits of the people, 5600,000 are employed in upwards of 30 Spermaeeti works. It contains also two banks, and two insurance companies. Pop. 1820, 7266. Lat. $41^{\circ} 15'$ N., and lon. W. C. D. $70^{\circ} 10'$ W. E. interect on the island of Nantucket.

Nantucket, pst. and capital of the island of Nantucket, situated on a basin, the N. side of the island, in the lat. of $41^{\circ} 15'$ N. and lon. of $70^{\circ} 10'$ W.; at the distance of 120 ms. SE. of Boston. It is a port of entry. It has one fine harbour, completely safe from all winds, being so well land locked. It has only low water, low water 74 feet water on its bar.

Nantwich, town of Eng. in Cheshire. There are salt springs from which are obtained great quantities of white salt; also a manufacture of cotton and sheet. The principal articles of

Cheshire are about this town, and it has a considerable trade in cheese. It is seated on the Weaver, and by the Chester canal, which here forms a broad basin, 25 ms. SE. of Chester, and 164 NW. of London.

Nan-yang, city of China, of the first rank, in the province of Ho-nan, seated on a small river, and surrounded by mountains, 100 ms. S. of Ho-nan.

Nan-yang, city of China, of the first rank, in the province of Quantong, seated on the Pei-kiang, near its source, 170 ms. NNE. of Canton.

Napaul, country of Asia; bounded on the S. by Bahar, W. by Oude and Rohilcund, NW. by Sirinagar, NE. by the mountains of Himnalah, which separate it from Thibet, and E. by Bootan. It is tributary to Thubet; and Catmandu is the capital.

Naples, kingdom, comprehending the S. part of Italy; bounded on the NW. by the Ecclesiastical State, NE. by the Gulf of Venice, and every where else by the Mediterranean. It is 300 ms. in length, by 100 in breadth, and divided into twelve provinces: namely, Terri di Lavoro (the ancient Campania Felix), Principato Citeriore and Ulteriore, Molise, Basilicata, Calabria Citeriore and Ulteriore, Abruzzo Citeriore and Ulteriore, Capitanata, Terra di Bari, and Terra d'Otranto; the last three formed the ancient Apulia, now called Puglia, on the E. side of the kingdom. The climate is extremely hot, especially in July, August, and September; and is said to be one of the most incessant and unfavourable to valetudinarians. In some seasons it rains every day for six or seven weeks together; but the most disagreeable part of the climate is the sirocco, or SE. wind, which is very common in May, and extremely relaxing. In winter there is seldom any ice or snow, except on the mountains. The country abounds with grain, the finest fruits and vegetables, rice, flax, oil, wine, saffron, and manna; and affords alum, vitriol, sulphur, rock crystal, marble, minerals, and fine wool and silk. Beside the manufactures noticed in the account of the city of Naples: waistcoats, caps, stockings and gloves, are also made of the hair or filaments of a shell fish, which are warmer than those of wool, and of a beautiful glossy green. The principal mountains are the Appennines, which traverse this country from N. to S., branching out to the two extremities; and the celebrated volcano, Mount Vesuvius. The rivers are numerous, but inconsiderable; the chief are the Garigliano, and Volturno. One of the greatest inconveniences to which the kingdom is exposed, is earthquakes. The established religion is the Roman catholic, and the clergy and convents, under the old government, possessed two-thirds of the whole kingdom; but Protestants and Jews are allowed to settle here. The inhabitants of this country have, at all times borne but an indifferent character among other nations: gluttony is here a predominant vice, while instances of sobriety are comparatively rare.

Naples, ancient, large, rich, and trading city of Italy, one of the finest in the world, capital of the kingdom of the same name, with a university. It is situated at the bottom of a bay, and is built in the form of a vast amphitheatre,

sloping from the hills, to the sea. Although the style of architecture is inferior to what prevails at Rome, and it cannot vie with that city in the number of palaces, or in the magnificence of the public buildings, the private houses in general, are better built, and the streets are broader and better paved. No street in Rome equals in beauty the Strada di Toledo at Naples; nor can any of them be compared with the beautiful streets, which lie open to the bay, and baffle the excessive heat of the sun, by being tempered with the sea-breezes, and gales wafting the perfumes of the Campagna Felix. The houses in general, are five or six stories high, and flat on the top, on which are placed numbers of flower vases, or fruit trees, in boxes of earth, producing a very gay and agreeable effect. On the mountain of St. Elmo, in a most pleasant situation, is a convent of Carthusians, on which much expense has been lavished, to render the building, the apartments, and the gardens, equal to the situation. Naples is admirably suited for commerce, and has all the necessaries and luxuries of life in great profusion; and yet trade is but in a languishing condition. The chief articles manufactured here are silk stockings, soap, snuff boxes of tortoise shell, or of the lava of Mount Vesuvius: tables, and ornamental furniture, of marble. They are thought to embroder here better than in France; and their nacaroni is preferred to that of any part of Italy. They excel also in liquors and confections; particularly in one kind of confection, called diabolonis, of a very hot and stimulating nature, and which is sold at a very high price. The number of inhabitants is computed at 350,000, which is very probable; for though Naples is not one-third of the size of London, yet many of the streets here are more crowded than the Strand; and a great proportion of the poorest sort are obliged to spend the night in them, as well as the day, for want of habitations. There is not a city in the world, perhaps, with the same number of inhabitants, in which so few contribute to the wealth of the community, by useful and productive labour. The number of priests, monks, fiddlers, lawyers, nobility, footmen, and lazzaroni or vagabonds, is immense, and the last alone are computed at 30,000. The nobility are excessively fond of splendour and show, as appears by the brilliancy of their equipages, the number of their attendants, the richness of their dress, and the grandeur of their titles. The king, it is said, counts 100 persons with the title of prince, and still a greater number with that of duke, among his subjects. 800 or seven of these have estates from 10 to 13,000*l.* a year; and a considerable number have possessions to about half that amount; while the annual revenue of many is not above 1000*l.* or 2000*l.* The inferior nobility are much poorer; many counts and marquises not having above 300*l.* or 400*l.* a year, of a paternal estate, many still less, and not a few enjoy the title, without any estate whatever. Although the churches and convents of Naples are not to be compared with those of Rome, in point of architecture, they surpass them in rich jewels, and in the quantity of silver and golden crucifixes, vessels and

other ornaments. The cathedral is a grand Gothic edifice; and of all the palaces, that of the king is not only the most magnificent, but in the best style of architecture. The harbour, which is spacious, is protected by a mole. The Bay of Naples is one of the finest in the world, being almost of a circular figure, about 30 ms. in diameter, shut out from the Mediterranean by the island of Caprea, and three parts of it sheltered by the circuit of woods and mountains. Naples was taken by the French in January, 1799, but retaken by the British fleet under Lord Nelson, in June following. In 1806 it was again taken possession of by the French under Massena, and soon afterwards Joseph Bonaparte was here crowned king of Naples. In 1803, the city suffered much damage by an earthquake. Naples is 110 ms. SE. of Rome, 104 NE. of Palermo, 217 SE. of Florence, and 300 S. by E. of Venice. Lon. 14° 20' E. lat. 14° 55' N.

Napoli di Malvasia, seaport of European Turkey, and capital of the island of Malvasia. It has a fine harbour defended by a good citadel; and a long wooden bridge, which joins it to the main land. It gives name to that excellent wine, called Malmsey; and was the ancient Epidaurus, famed for the temple of Esculapius. It is seated on a rock, at the entrance of the Bay of Napoli di Romania, 38 ms. SE. of Misitra. Lon. 22° 58' E. lat. 36° 53' N. *Napoli di Malvasia* stands on the site of Epidaurus Limera, a town of Laconia. The other city of Epidaurus, much more generally known, belonged to Argolis, and stood on the Saronic gulf opposite the island of Egina, in N. lat. 37° 38'. Epidaurus Limera stood on the eastern shore of the SE. peninsula of Laconia, N. lat. 36° 43'.

Napoli di Romania, seaport of European Turkey, in the Morea, on a peninsula, at the head of a bay of the same name. It is inhabited by 60,000 Greeks, beside people of different nations; and has a large harbour, with a narrow entrance defended by a citadel. This town was taken by the Turks in 1715. It is 20 ms. SW. of Corinth. Lon. 22° 44' E. lat. 37° 44' N.

Nara, town of Japan, in the island of Nippon, with a magnificent castle, 23 ms. NW. of Meacow.

Narasimhapura, town of Hindostan, in Mysore, with two considerable temples. It is well built, and stands in a fertile country on the Javery immediately below the influx of the Kapi, 20 ms. ESE. of Mysore.

Narberth, town of Wales, in Pembrokeshire, in a hill, 12 ms. NE. of Pembroke, and 742 W. of N. of London.

Narbonne, city of France, in the department of Aude. In the time of the Romans, it was the capital of that part of Gaul called Gallia Narbonensis; and here emperor Marcus Aure-

lius was born. Some Roman inscriptions, in different parts of the city, are still visible; and the canal from the river Aude, through the city, to the Mediterranean, was dug by the Romans. Narbonne is famous for its honey, and the cathedral is remarkable for its noble choir. It is 5 ms. from the Mediterranean, and 80 ESE. of Toulouse. Lon. 3° E. lat. 43° 11' N.

Narborough, island of S. America, on the coast of Chili, so called because Sir John Narborough refreshed his men here, when sent to the South Sea in the reign of Charles II. Lon. 74° 35' W. lat. 45° N.

Narcondum, barren rock rising abruptly out of the Indian Ocean, uninhabited, and seemingly destitute of vegetation. It is about 20 leagues E. of the Andamans.

Narula, episcopal town of Naples, in Terra d'Otranto. In this little town there are 8000 inhabitants; it is 20 ms. NW. of Otranto. Lon. 18° 16' E. lat. 40° 18' N.

Narenta, town of Turkey, in Dalmatia, with a bishop's see, seated on a gulf of the same name, 46 ms. NE. of Ragusa. Lon. 18° 27' E. lat. 43° 35' N.

Narnulla, town of the Deccan, in the province of Berar, 72 ms. E. of Burnampour. Lon. 77° 34' E. lat. 21° 25' N.

Narni, ancient episcopal town of Italy, in Sabina. Here are the ruins of a marble bridge, built by Augustus, one of whose arches was 150 feet high, and 200 broad; as also of an aqueduct that brought water from a spring, at the distance of 15 ms. It contains a great many noble families, and is seated on the Nera, 20 ms. SW. of Spoleto, and 40 NE. of Rome.

Narva, river of the Russian empire, which issues from the Lake Peipus, and watering Narva, flows into the Gulf of Finland, 8 ms. below that town. It is noted for two picturesque waterfalls pompously described by travellers, but far inferior to that of the Rhine, at Schaffhausen. The breadth of the river is about 200 feet, and the perpendicular height of the falls scarcely exceeds 20 feet.

Narragansett, beautiful bay of the U. S., in R. I. It opens between Point Judith on the W., and Seaconet to the E., and extending from S. to N. 30 ms., to the city of Providence, where it terminates, and receives Pawtucket and some smaller rivers. It varies in width from 1 to 15 ms.; and is chequered by R. I., Prudence, and Conanicut. One of its minor bays, Mount Hope, receives Taunton river from Mass. The shores are bold, without being very elevated, and the adjacent country picturesque, and well peopled. It was the opinion in 1817, of the U. S. Navy Commissioners, that this bay afforded the most eligible site for a naval depot NE. from the Chesapeake.

Narragansus, bay of Washington cty. Maine, receiving a small river of the same name, from the NW. part of the cty.

Narragansus, pst. Washington cty. Maine, on the Narragansus, 37 ms. W. from Portland. Pop. in 1830, uncertain.

was the residence formerly of a king, and is situated 400 ms. SE. of Bombay. Lon. $76^{\circ} 10'$ E. lat. $15^{\circ} 30'$ N.

Narva, a strong town of the Russian empire, in Ingria, or the government of Petersburg. The houses are built of brick, stuccoed white; and it has more the appearance of a German than of a Russian town. In the suburbs, called Ivangorod, or John's town, the colossal remains of an ancient fortress, built by Ivan Vassilievitch the Great, impend in a picturesque manner over the steep banks of the Narova. Near Narva is the spot celebrated for the victory which Charles XII. in the 19th year of his age, gained over the Russian army in 1700. The town was taken by the czar about five years after, who traversed the streets on horseback with his drawn sword in his hand, restrained his troops from pillage, and placed guards at the doors of the principal houses, and before the churches. The principal exports from Narva are, hemp, flax, timber, and corn; the imports, salt, tobacco, wine, salted herrings, spices, tea, sugar, and other grocery wares. It is situated on the Narova, 8 ms. from its mouth, and 100 W. of Petersburg. Lon. $27^{\circ} 52'$ E. lat. $59^{\circ} 18'$ N.

Narwah, or **Narwha**, a town of Hindoostan Proper, in the province of Agra, seated a little above the confluence of the Sindhe with the Jumna. It is 127 S. of Agra. Lon. $79^{\circ} 17'$ E. lat. $25^{\circ} 40'$ N.

Nashville, psty., seat of justice, Davidson city, Tenn., and now seat of the state government, on the left bank of Tennessee river, 200 ms. W. from Knoxville, 430 NE. from Natchez, and 480 NNE. from New Orleans, by General Jackson's road. Lon. W. C. $9^{\circ} 40'$ W. lat. $38^{\circ} 4'$ N. It is the central point of a very fertile, well cultivated, and populous country. Cumberland river is navigable, except at very low water, for steam-boats, to this town; one or more of these vessels ply between there and New Orleans. It contains beside the ordinary city buildings, two printing offices, two banks, an academy for young ladies, and several manufactories. Pop. about 4000.

Nassau, country of Germany, in the circle of the Upper Rhine, bounded on the N. by West-

phalia, on the E. by the city of Solmes, on the S. by the territory of Mentz, and on the W. by Treves. It is very fertile, and contains mines of iron, copper, and lead. This small territory was formerly known by various names, but now united into a duchy, with an independent sovereign duke. Area about 2200 sqms. and 300,000 inhabitants.

Nassau, town of Germany, in the duchy of the same name, on the river Lahy, 12 ms. SE. of Coblenz. Lon. $7^{\circ} 46'$ E. lat. $50^{\circ} 18'$ N. It is held in common, between the prince of Nassau and king of the Netherlands.

Natchez, principal town in the state of Miss., and the seat of justice for Adams city, lies upon the left bank of the Mississippi river, at lat. $31^{\circ} 33'$ N. and lon. W. C. $14^{\circ} 30'$ W. The site is a beautiful and commanding bluff, rising from 100 to 200 feet above the Mississippi river; and by its peculiar location is protected from the noisome exhalations of the adjacent low grounds. The edge of the bluff rises in a long narrow ridge, which renders the Mississippi river invisible from the streets of the town. It contains 280 dwelling houses, four places of public worship, one for Roman Catholics, one for Presbyterians, one for Methodists, and one for Baptists; six large warehouses; an elegant court-house and jail, 25 dry good stores, two steam saw mills, and a steam aqueduct. A state bank, with a capital of 900,000 dollars, having offices in Woodville and Port Gibson. This is the only banking institution in the state, and by its charter the faith of the state is pledged not to grant any other banking charter until 1840.

The sessions of the supreme court, and of the district court in the U. S. are held at present at this place.

During about nine months of the year, from October to the ensuing June, Natchez is a very lively scene of commercial activity. Immense quantities of produce from the regions on Ohio, Mississippi, &c. find here a ready and profitable market. The cotton shipped from this port in ordinary seasons, exceeds 35,000 bales. The entire cotton shipped from the whole state in 1820-21, was estimated at 80,000 bales; and that for 1821-2, supposed will at least be equal to that of the preceding year.

The bills of mortality reported under the superintendence of the board of health, justify the opinion that Natchez is healthy for residents. In sultry summers, the greatest number of deaths are amongst persons engaged on the navigation of the Mississippi river.

The following table exhibits the actual and progressive pop. of this city.

Natchez is governed by a mayor, aldermen, and city council, with the ordinary city justices of the peace, who have, in ordinary civil and criminal jurisdiction, concurrent power with the aldermen. It is 322 ms. by water, and 156 by land, above New Orleans, 1613 below Pittsburgh, 846 below St. Louis, and 670 below the mouth of Ohio.

Natchitoches, NW. parish of Lou., bounded by Texas SW. and W., Arkansas territory N., Washita parish E., Rapides SE., and Oupelousas S. Length 140 ms., mean width 75; area 10,500 sq. ms. Surface generally hilly, particularly between Red and Sabine rivers. Except near the margin of Red river, the soils are generally sterile, and covered with pine timber. Some other, though comparatively small tracts of productive soil, skirt the streams. An extensive body of low ground, subject to annual submersion, extends along Red river, and runs through this parish obliquely. The greatest part of the inhabitants are settled on the alluvial banks of Red river. The soil upon the margin of the Sabine is in very few places fit for culture. Beside Red and Sabine, the rivers of *Natchitoches* are Bodcau, Dacheet, Black river, and Saline. Chief staples, cotton, lumber, and peltry. Chief town, *Natchitoches*. Pop. 1820, 7466. Navigator's Islands, a cluster of ten islands in the Pacific Ocean, discovered by Bougainville.

ville, and explored by Perouse in 1787. They are called by the natives Opoun, Legne, Fandou, Maoua, Oyalava, Galinasse, Pola, Shika, Ousamo, and Ouero Opoun; the most southerly and easterly of these islands lies in lon. $169^{\circ} 7' W.$ lat. $14^{\circ} 7' S.$ Maoua, Oyalava, and Pola, may be numbered among the largest and most beautiful islands of the S. Pacific Ocean. They combine the advantages of a soil fruitful without culture, and a climate that renders clothing unnecessary. The inhabitants are a strong and lusty race, scarcely a man to be seen among them less than six feet high, and the women are in proportion. See *Maoua*.

Narxow, town of Denmark, in the isle of Laland, with a harbour commodious for trade and a plentiful fishery. It is 60 ms. SW. of Copenhagen. Lon. $11^{\circ} 31' E.$ lat. $54^{\circ} 52' N.$

Navos, or *Naxia*, considerable island of the Archipelago, 25 ms. in length, and 88 in circumference. It abounds with orange, olive, lemon, cedar, citron, pomegranate, fig, and mulberry-trees; and though it has no harbour, carries on a considerable trade in barley, wine, oil, cheese, figs, cotton, silk, flax, salt, oxen, sheep, and mules. It is inhabited both by Greeks and Latins, has four archiepiscopal sees, and a great many villages; but the whole island does not contain above 8000 inhabitants, the highest mountain is Zia, which signifies the mountain of Jupiter. This island was anciently famous for a sort of marble called ophitus, from its being spotted like the skin of a serpent, with green and white spots. On the mountains near the coasts of the Mediterranean, is found the best emery, whence the neighbouring promontory is by the Italians called Cape Smeviglio. On the S. side of the island is a town defended by a castle. About a gunshot from hence, is a fine marble tower on a rock, in the middle of a heap of stately ruins of marble and granite, probably the remains of Bacchus's temple. Lon. $26^{\circ} 10' E.$ lat. $36^{\circ} 41' N.$

Negril Point, most westerly promontory of the island of Jamaica.

Negro, Cape, promontory of Africa, on the W. coast of Angola, being the most southerly country to which the Europeans usually resort to purchase slaves. Lon. $10^{\circ} 40'$ E. lat. $15^{\circ} 54'$ N.

Negro, Rio, large river of S. America, rises in the Andes. Lon. W. C. 3° E. lat. 2° N. It flows SE. by E. by comparative courses 1000 ms., and falls into the Amazon at lon. W. C. 17° E., lat. 3° S. By one of its branches, the Cassiquiare, it has a communication with the Orinoco.

Negro, Rio, river of S. America, rising in the Andes of Chili. Lon. W. C. 7° E. and lat. 33° S. It flows SE., and falls into the Atlantic Ocean, after a comparative course of 500 ms.

Negro's Island, one of the Philippine Islands, between Pannay and Zebu.

Negroland, or *Nigritia*, country of Africa, through which the river Niger is supposed to run. It has the great desert of Sahara to the N., and stretches far to the S., but the inland parts are very little known. The Europeans have many settlements on the coast, where they barter European goods for slaves, gold dust, and elephant's teeth.

Negroponte, Island of, is ancient *Euboea*, extends along the ancient Attica, Boeotia, and the country of the Ountian Locriano, about 100 English ms. with a mean width of not above 10 ms. Its area perhaps 4000 sqms. The surface very much diversified; in some places long alluvial flats, and in others rising into high mountains. This is considerably the largest and most important island in the Archipelago. When under the Athenians, it was regarded as the granary of that republic, and in every succeeding age, its possession has been regarded as a great national advantage. When the maritime power of Venice supplanted that of the Romano-Greek empire, Negroponte with Candia, and several other islands, fell under the power of the former. Mahomet II. wrested it from the Venitians, who yet retain the vain memorial of former greatness, the standard of the kingdom of Negroponte. This island must ever remain highly valuable, from the fertility of its soil, and from its commanding position; it is, however, deficient in good ports. Negroponte lies between N. lat. 38° , and $39^{\circ} 5'$.

Negroponte, Straits of, is more particularly confined to what was in former times, the narrowest part of the sheet of water, separating the island of Euboea from the continent of Greece. This would intend the narrow channel opposite the village of Negroponte, but in this article, it is my wish to notice the entire strait, from the Gulf of Zeitoun, SE. into the Archipelago. The entire distance from the extreme NW. angle of the island of Negroponte, to a line drawn from the port of Prasie, modern Raphti, to Cape Rosso, ancient Petalia, is within a trifle of 100 English ms. Within these limits, the strait is of very unequal width. From Raphti to Cape Rosso is about 14 ms., from this line the strait narrows to Negroponte where it is less than half a mile. Beyond Negroponte the water abruptly widens, and varying from 5 to 10 ms. in breadth, finally terminates in the Gulf Zeitoun. The shallowness of the water renders the Negroponte of little use as a channel of navigation, though used as

such by the small vessels belonging to the inhabitants of the coasts. Though not augmented by the water of the Atlantic Ocean, nor perhaps much influenced by the ordinary causes of ocean tides, the Straits of Bonifacio between Corsica and Sardinia, the Straits of Messina between Sicily and Italy, and more particularly the Negroponte, exhibit phenomena which prove a constant variation of surface in the Mediterranean. Long before the days of Aristotle, and down to this time, the ebbing and flowing of the Euripus have arrested attention. From the observations of Wheeler, Hobhouse, and others, and from the natural position and features of its shores, we may very safely consider the very unequal and irregular fluxes of the Negroponte, as occasioned principally by wind.

Negropont, strong city, capital of the island of the same name, 30 ms. NE. from Athens, and 260 SW. from Constantinople. Lat. $38^{\circ} 30'$ N. lon. $24^{\circ} 8'$ E.

Negroponte, arises from an Italian corruption of the three Greek words, *ne* *rov* *E'* *ypov*, pronounced *ne* *rov* *E'* *ypov*. *Hobhouse*.

This traveller made a very rapid visit to the town and straits, and viewed the latter from the wooden bridge which unites the continent of Livadia, to the island of Negroponte, ancient Euboea, and has given a confused and unsatisfactory account of what he saw during his brief stay. In one place he observes, "What I saw of Euripus was, that the stream flows with violence, like a mill-race, under the bridges, and that a strong eddy is observable, on that side from which it is about to run, about a hundred yards above the bridges; the current, however, not being at all apparent, at a greater distance either N. or S. Yet the ebbing and flowing are said to be visible at 10 or 12 leagues distance, at each side of the strait, by marks shown of the rising and falling of the water in several small bays on both coasts. The depth of the stream is very inconsiderable, not much more than four feet. Negroponte stands on a broad flat peninsula, which projecting into the bays on the mainland, makes the windings of the strait, in some places, look like inland lakes, in others, like rivers, as the breadth enlarges or diminishes. The Boeotian side is high and rocky, where the fort of Carababa has been built, to command the bridge and village. Negroponte contains about 800 mean low built houses, inhabited by Turks. The mountains to the NW. rise to the region of perpetual snow. The land to the N. and E. of the town, is open but well cultivated; that to the S., covered with fine groves of olive-trees, and interspersed with orange and lemon gardens. The place is considered extremely unhealthy, and during the summer, the heats are almost insupportable."

Nevahand, ancient town of Persia, in Irac Agemi, famous for a battle fought near it, between the calif Omar, and Vez Degerd, king of Persia, in 1638, when he lost that kingdom. It is 170 ms. NW. of Isfahan. Lon. $47^{\circ} 10'$ E. lat. $32^{\circ} 20'$ N.

Neidenau, town of Germany, in the electorate of Mentz, situated on the Jart. It is 33 ms. ESE. of Heidelberg.

Neidenberg, town of Prussia, with a castle on a mountain, 75 ms. E. of Culm.

Nemours, town of France, in the department of Seine and Marne and late province of the Isle of France, between two hills. It is seated on the Loing, 10 ms. S. of Fontainebleau, and 15 SE. of Paris. Lon. $2^{\circ} 37' E.$ lat. $46^{\circ} 16' N.$

Nen, the principal river of Northamptonshire, which rises in the W. part of the cty. It is made navigable at Northampton, leaves the cty. at Petersborough, and crossing the Isle of Ely, forms part of the W. boundary of Norfolk, and falls into the Lincolnshire Wash. It likewise communicates by several channels, with the Great Ouse.

Nen, river, U. C., empties itself into Lake Ontario, in the tp. of Pickering; it runs for a considerable distance in the country through Pickering, Markham, &c., crossing the Yonge-street, and apparently rising in the vicinity of one of the branches of Holland's river, with which it will probably, at some future period, be connected by a canal. This river abounds with fish; at its embouchure are good intervals for meadow ground, and it is the back communication from the German settlement in Markham to lake Ontario.

Nevacastro, fort of Turkey in Europe, in Romania, where the Turks always keep a good garrison. It is seated in the middle of the Strait of Constantinople, 12 ms. from that city. Lon. $29^{\circ} 4' E.$ lat. $41^{\circ} 10' N.$

Ness Loch, beautiful lake of Shet. in forer-northern Shet., 23 ms. in length, and for the most part 24 in breadth, though sometimes 2. It is sheltered on the N.W. by the high mountains of Brughart and Meafourvoney, and edged with coppices of birch and oak.

Nerchinsk, town of Siberia, capital of a province of the same name, but sometimes called Naguria, in the government of Irkutsk, with a

fort. The adjacent country is mountainous but yields excellent pasture for cattle; and there are some considerable lead and silver mines. It is seated at the conflux of the Nerscha with the Shilka, 440 ms. E. of Irkutsk. Lon. $117^{\circ} 34' E.$ lat. $51^{\circ} 52' N.$

Nevada, river of Texas, rises at lat. $32^{\circ} N.$ and lon. W. $107^{\circ} 30' W.$ It is formed by several branches, the principal of which are the Ayeish, Attoyeaque, Attascorito, Carlos, Nana, and Angeline. It flows a little E. of S. and falls into Sabine lake, after a comparative course of about 170 ms. The country drained by the Nevada, though generally sterile, is superior to that watered by the Sabine. The river is often called, though erroneously, Rio Nieves, or Snow river. Its name is derived from a tribe of Indians.

Netherlands, or *Low Countries*, country of Europe, anciently called Gallia Belgica, 260 ms. in length, and from 100 to 200 in breadth, bounded on the W. and N. by the German Ocean, E. by Germany, and S. by France. In the ninth century, the sons of emperor Lewis the pious, having divided the dominions of their father, who possessed Germany, France, and Italy, a new kingdom was formed, comprehending Germany and France and a part of the Netherlands. It was called Lothario, but did not long subsist; for it was soon divided into two; and that seated near the Mediterranean was called the kingdom of Burgundy, while the other to the N., had the name of Austrasia. Neither did this last continue long, it being divided into seventeen provinces, under different names, exclusive of the territories of Liege and Upper Guelderland; but they all depended on the empire of Germany, and were called Lower Germany. In process of time, the house of Burgundy purchased many of them, and was about to form them, with Burgundy, into a kingdom; but Charles the bold, the last duke of Burgundy, being killed by the Swiss in 1477, his part of the Netherlands devolved on Mary, his only child, by whose marriage with emperor Maximilian, the Netherlands were an acquisition to the house of Austria. Emperor Charles V., king of Spain, in 1555, abdicated the sovereignty of the Netherlands, and soon after, the Spanish crown, in favour of his son Philip. The tyrannical and cruel bigot, Philip II., who endeavoured to introduce the inquisition into the Low Countries, with the barbarities exercised by the duke of Alva, exasperated the people to such a degree, that they threw off the Spanish yoke, and under the conduct of William I. prince of Orange, formed the famous league of Utrecht, in 1579, which proved the foundation of the Republic of the Seven United Provinces. After a long war (with the interval of a truce of twelve years) Philip IV. expressly acknowledged the independence of these provinces, in the treaty of Westphalia, in 1648. The sixteen provinces, namely, Brabant, Antwerp, Malines, Namur, Limburg, Luxembourg, Hainault, Flanders, Artois, and Cambresis, returned under the dominion of Spain, but with very favourable stipulations with respect to their ancient liberties. On the accession of a branch of the house of Bourbon to the Spanish mo-

narchy, it was stipulated, in 1714, that the Spanish Netherlands should return to the German branch of the house of Austria; but some considerable parts were obtained, by conquest or cession, by the French and Dutch. The Dutch had part of Brabant, Limburg, and Flanders: the French had Artois and Cambrésis; with part of Hainault, Flanders, and Luxembourg: Austria held the rest; and the provinces of Antwerp and Malines were included under the name of Austrian Brabant. In 1788, emperor Joseph II. having projected many innovations, and enforcing them with violence, a universal spirit of revolt broke out; an army of 40,000 men rose, as if by magic, to support the renunciation of all allegiance, which several of the provinces openly made; a congress was formed from the different states, in whom the supreme government was vested; and by the end of 1789, the Austrians were expelled. The new government, however, was not of long duration; for Leopold II. (the successor of Joseph) was enabled, partly by conciliatory measures, and partly by the mediation of Great Britain, Prussia, and Holland, to recover the entire possession of his authority; the mediating courts having guaranteed the restoration of the ancient Belgic constitution. In 1792 the French over-ran the Austrian Netherlands: they were driven out of the country in 1795; but they returned in 1794, and subdued every part of it; and in 1795 decreed it, with the territories of Liege and Upper Guelderland, an integral part of the French republic. To this country they gave the name of *Belgium*, and divided it into nine departments; but in 1814, agreeably to the treaty of Paris, they evacuated all that part which formerly belonged to Austria and Holland. The Netherlands, or Belgium, is 170 ms. long and 90 broad, bounded on the N. by Holland, E. by Germany, S.W. by France, and N.W. by the German Ocean. The principal rivers are the Scheldt, Meuse, Dyle, Sambre, and Lis; and there are many fine navigable canals. The air is temperate, and the soil extremely fertile; but the mouths of the rivers and harbours are frozen in winter. Brussels is the chief town. See *Holland*, or *Dutch Netherlands*.

Netherlands, kingdom of Europe, formed in 1814, and containing seventeen provinces, or eighteen, if the grand duchy of Luxembourg is included. It lies between lat. 49° 30' and 53° 34' N., and between lon. 2° 30' and 7° E. from London. It is bounded N.W. by the German Ocean, S.W. by France, and E. by Germany. Area 24,400 sqms., inhabited by an aggregate pop. of 5,270,000, or 215 to the sqm.

Its provinces are:

The government of the Netherlands is a limited monarchy, with great resemblance to that of king, but the principles of civil liberty much more respected in the latter than in the former. In one very important particular the government of the Netherlands approximates more to that of the latter than any other in Europe. Each province has its own assembly where municipal concerns are regulated independently in an extensive degree of the general government. With all this species of appearance, however, the people of the Netherlands have but little influence over the acts of the crown. The person of the king is inviolable; and all bills must emanate from his cabinet. The members of the house of commons are nominated by the king and hold their offices for life, though their titles and offices are not hereditary. The freedom of the press is tolerably secured, and no religious test required for office.

The succession to the crown fixed in the family of Nassau Orange, and title of the monarch "king of the Netherlands; prince of Orange;" and as a member of the Germanic confederacy, "grand duke of Luxembourg."

The kingdom of the Netherlands has six universities, which are Leyden, Utrecht, Groningen, Louvain, Ghent, and Liege. The four former were ancient, the two latter founded by the present government. There exists also a naval school at Helvoetsdijk, and a military school at Dord.

The annual revenue and expenditure of this kingdom amounts to about 7,000,000 pounds sterling, or about 30,000,000 of dollars. The colonies of the Netherlands are extensive and highly important; they consist of—1st, in Asia, Java, Amboyna, Ternate, Banda, Malacca, and Macassar; with factories on the Cochin-China coast and in Persia. In Africa, 12 or 13 small forts on the coast of Guinea. In America, Surinam. In the W. Indies, the islands of Curacao, St. Eustachius, and St. Martin.

Vitshkau, town of Upper Saxony, in Voigtland, situated on the Golsch, 12 ms. S.W. of Zwickau.

Vulturno, town of Italy, in Campagna di Roma, near the ruins of the ancient Antium, at the mouth of the Loricina, 34 ms. S. by E. of Rome.

Neva, river of Russia, which issues from the Lake Ladoga, and flows to Petersburg; where it divides into several branches, and enters the Gulf of Finland at Cronstadt. It is formed by the drain of the vast low country N.E. from St. Petersburg, and conveys to the Gulf of Finland the waters of lakes Ladoga, Onega, and many others. It is only called the Neva between Lake Ladoga and the Gulf of Finland.

Nevada, Sierra de, chain of mountains in the S. of Spain. Wherever the adjective nevada, is annexed to Spanish mountains, it signifies that they are covered with perpetual snow. The Sierra de Nevada of Granada, rises in one peak, the Muley Hassen, to 11,350 feet, and in another, the Veleta, to 10,985 feet above the ocean level. The Muley Hassen is the highest mountain in Europe W. from Mount Blanc.

Neuburg, fortified town of Bavaria, capital of the principality of the same name. It stands on a hill, on the Danube, and has two gates, but the fortifications are chiefly gone to decay. The castle is a large building, and contains a hall of extraordinary size, embellished with portraits. It is 32 ms. NNE. of Augsburg, and 60 SW. of Amberg. Lon. $11^{\circ} 12' E.$ lat. $48^{\circ} 49' N.$

Neuburg, town of Bavaria, seated on the Schwarz, 17 ms. ESE. of Amberg.

Neuburg, town of Suabia, in Brisgau, seated near the Rhine, 12 ms. S. of Brisach.

Neuburg, town of Suabia, in the kingdom of Wurttemberg, seated on the Enz, 25 ms. W. of Stuttgart.

Neuchateau, town of France, in the department of Vosges, seated in a soil fertile in corn and good wine, on the river Meuse, 25 ms. SW. of Nancy.

Neuchatel, territory of Switzerland, which, with that of Vallegin, forms one principality, between the Lake of Neuchatel and the borders of France; extending 36 ms. from N. to S., and 18 in its greatest breadth. By the death of the Dutchess of Nemours, in 1707, the sovereignty of Neuchatel and Vallegin was claimed by Frederick I. of Prussia, as heir to the prince of Orange; and his right was acknowledged by the states of the country.

Neuchatel, town of Switzerland, capital of a principality of the same name. It contains not more than 3,000 souls, and is situated partly on the plain between the Lake of Neuchatel and the Jura, partly on the declivity of that mountain. The chief article of exportation is wine, which is much esteemed, and produced from the vineyards in its vicinity; and, there are here manufactures of printed linens and cottons. Among the many public works which have been lately executed here, are the new town-house, and a superb causeway leading towards the valley of St. Imier. Neuchatel is governed by a great and little council: the first is composed of 40 persons; the second consists of 24 members, comprehending the mayor, who is president. It is 25 ms. NE. of Lausanne, and 25 W. of Bern. Lon. $7^{\circ} E.$ lat. $47^{\circ} 5' N.$

Neuchatel, or *Freedom*, lake of Switzerland, which takes its name from a town of the same name, stretches about 20 ms. in length from the town of Yverdon to that of Neuchatel, in a direction from SW. to NE., at which extremity it has communication with the Lake of Bienna by a narrow outlet, and is 17 ms. long and 5 broad.

Newbern, village of Wales, in Pembrokeshire, near a river of the same name, 1 mile NE. of St. Asaph. There are several monuments of antiquity in this parish, and among the rest a single stone, of a square form, 13 feet high and broad, with a circular top, charged with a

cross, and all the sides are neatly carved with knot work of various patterns.

Nevers, considerable episcopal town of France, in the department of Nièvre, and late province of Nivernois, seated on the Loire, over which it has a handsome bridge. The town is built in the form of an amphitheatre, containing many elegant buildings, among which is the ancient palace, in which John Casimer, king of Poland, expired in 1672. It is 145 ms. SE. of Paris. Lon. $3^{\circ} 14' E.$ lat. $46^{\circ} 59' N.$

Newcastle, or *Newcastle-upon-Tyne*, large borough and seaport of Eng. in Northumberland, situated between the Picts Wall and the Tyne. The river is so deep, that ships of 600 tons burthen may come up to the town in ballast, but the colliers wait at Shields for their lading, which is brought down the river in lighters, from the great collieries which have for centuries past supplied London, and most of the southern parts of the kingdom with coal. This is the staple trade of, and has been the source of great wealth to Newcastle; the coals carried thence annually, are computed to amount to 1,187,000 tons; it also manufactures steel, iron, glass, woollen cloth, earthenware, white lead, milled lead, &c. to a great extent; and here is a round tower for the manufactory of patent shot; it exports large quantities of lead, salt, salmon, butter, tallow, and is so very famous for its grindstones, that scarce a vessel goes from thence without some of them. Newcastle was made a borough by William I., and the first charter for digging coal was granted by Henry III. in 1239. It is 34 ms. S. of Alnwick, 94 N. of York, and 271 N. by W. of London. Length 36 ms., mean width 12; area 432 sqms. The surface of this city is generally decorated with hill and dale, though the northern section is more broken than that of the S. The projected canal to unite the Delaware and Chesapeake bays is to pass across this city. The line of separation between the primitive and the sea sand alluvial formations, enters the NE. angle of Newcastle near Delaware river, and ranging SW. merges into Md. between Glasgow and Frenchtown. Brandywine river, and Red, and Whiteclay creeks, rise in Chester city. Penn., and flowing nearly S. fall over the primitive ledge into Christiana. The latter rises also in Penn., and crossing the NE. angle of Md., flows nearly S., between Elk river, and Whiteclay creek, falls also over the ledge, and thence turns to NE. along its outer verge to Wilmington. This range of falls renders the water facility found in Newcastle city for the propulsion of machinery, equal to any other of equal extent in the U. S. This natural advantage has been extensively improved on the Brandywine in particular. The principal staple of Newcastle is flour. Chief town, Wilmington. See Brandywine. Pop. 1820, 27,899. Newfoundland, island on the E. coast of N. America, between 47° and 52° N. lat. It was discovered by Sebastian Cabot in 1496; and after many disputes with the French it was ceded to the English in 1713. Its form is triangular; the N. point is separated from Labrador by the strait of Belleisle, and from this apex it is 350 ms. in length to the base, which is 300 in breadth. It is a mountainous, woody country, and very cold, being covered with snow five months in the year. It seems to have no inhabitants of its own; but in the summer time is visited by the Esquimaux Indians. It has several bays and harbours, and there are about 500 English families who continue here all the year, beside the garrison of St. John, Placentia and other forts. In the fishing season, which begins in May and ends in September, it is resorted to by at least 10,000 people, on account

of the great fishing-banks to the SE. of the island; for here they cure the cod, which is carried not only to England, but to the Mediterranean and W. Indies. In winter the chief employment of the inhabitants is to cut wood; and the smallest kind, used for fuel, is drawn by their large dogs, trained up and harnessed for that purpose. There is great plenty of game, fish and fowl, but very little corn, fruit or cattle. St. John is the principal settlement.

New Granada, formerly a captain generalship of Spain, in S. America, now an integral part of the Republic of Columbia. It is bounded N. by the Caribbean Sea, NE. by the former captain generalship of Caracas, SE. by Brasil, S. by Peru, and W. by the Pacific Ocean, extending from 12° N. to 6° of S. lat., and from 16° E. to 2° W. lon. from Washington. The features of nature are on a scale commensurate with the expansive area of this country. It contains the highest mountains yet measured on the western continent, and the alluvial plains near the mouth of the Magdalena.

The Andes of Peru, gradually separating into different ridges traverse New Granada from SW. to NNE. A little to the N. of the Equator three very distinct mountain chains extend; one following the Pacific coast, reaching, and is continued in the Isthmus of Darien; the second or middle range runs nearly N. and S. separating the basins of Magdalena and Atrato, merges into the Caribbean Sea. The third or eastern chain ranges NNE. towards the head of the Gulf of Maricao, and separates the confluent of the Magdalena and Orinoco. At about 8° N. lat. the latter chain again divides; one

branch turns N. and merges into the Caribbean Sea, at Cape Vela; the other gradually rises to the E., and constitutes the mountains of Caracas.

The rivers of New Granada, are numerous and important. Those flowing into the Pacific Ocean are generally short, and from the great inclination of their planes of descent rapid in their course. See *Guayaquil* in the *Addenda*. A communication between the Atlantic and Pacific Ocean has been proposed through the St. Juan of the Pacific, and Atrato, flowing into the Caribbean Sea. See *Atrato*. Between the great northern ridges of the Andes which we have noticed, rises and flows the Magdalena. This is truly the river of New Granada, having its source at 2° and entering the Caribbean Sea at 11° N. lat. It is formed by two great branches, the Magdalena Proper, and the Cauca. It is rendered in a great degree unnavigable from the rapid descent of its plane.

East from the Andes, in all the length of New Granada, in Cundinamarca, and Quite spreads an immense plain across which meanders the innumerable branches of the Amazon and Orinoco. The principal confluent of the former in New Granada, are, the Tunguragui, Napo, Ica, Japura, and Negro. Those of the Orinoco, are the Yurritá, Ua, Vichada, Meta, and Apuré. These rivers, though mere branches of the two mighty rivers, Amazon, and Orinoco, flow by comparative course from 300 to 700 ms., and are generally navigable. The country over which they flow is however, yet a wilderness, or extensive waste inhabited only by savages.

The climate of New Granada, partakes of a the diversity of its surface. The elevated table land of the valleys of the Andes has been celebrated for salubrity, whilst the inhabitants of the low alluvial coasts have been found subject to the ordinary malignant diseases incident to such situations in tropical climates.

New Granada has been justly celebrated for its vegetable and mineral wealth. In a country of such variety of elevation within the tropics, the range of vegetable life must embrace nearly all the most valuable fruits and plants useful to man. Gold, silver, platina, iron, and emeralds are enumerated amongst its mineral productions.

In the animal kingdom, the condor, the largest carnivorous bird yet known, is in a great degree peculiar to this country.

 Extending from lat. $42^{\circ} 41'$, to $45^{\circ} 11' N.$

This state differs more in the relative elevation of its parts, than any section of the U. States; and of consequence its climate and seasons have a corresponding excess in their extremes. The Atlantic border is a sandy beach, followed by hills which increase rather rapidly in elevation. The country rises indeed, by so rapid an acclivity, that the tides do not rise in the rivers more than from 12 to 15 ms. inland. The hilly region is quickly followed by the mountainous. Between the Connecticut and Merrimack rivers, and near the SW. angle of this state, Grand Monadnoc rises amongst inferior summits, to 3254 feet above the ocean level. Farther N., Sunapee is followed by Mooschoilock, the latter attaining an elevation of 4636 feet. Between the sources of Connecticut, Androscoggin, and Merrimack, rise, however, the highest mountain summits yet measured in the U. States. Some of the peaks of the White Mountains rise above 6000 feet above the Atlantic Ocean. Taken as a whole, the natural features of New Hampshire are bold, prominent, and in many places sublime. If we turn our view to the rugged aspect of its scenery, we would be led to expect much less fertility of soil; but in fact, few sections of the U. States of equal extent, have more productive land than is included in New Hampshire. The most important vegetable productions are grass, wheat, rye, Indian corn, oats, &c.

The manufacturing establishments of New Hampshire, are numerous and increasing. More than 30 cotton and woollen manufactures are in operation in that state, and many of them on a very enlarged scale.

Staples, iron, lumber, pot and pearl ashes, fish, beef, live stock, pork, and flax-seed.

For civil and political purposes, New Hampshire is subdivided into the following cities.

New Haven, cty. Conn., bounded by Long Island Sound S., Housatonic river, or Fairfield SW., Litchfield NW., Hartford N., and Middlesex NE.; length 27 ms., mean width 22; area about 600 sqms. This is one of the most pleasantly diversified cties. in the U. States. It is traversed from SSW. to NNE., by a chain of mountains of no considerable elevation, which rises in the vicinity of New Haven city, and is intersected by Connecticut river at Middletown, in Middlesex cty. Beside the Housatonic, New Haven is drained by the Naugatuck and Quinnipiac rivers. With the exception of some tracts of small extent near the sound, the surface is hilly or undulating. The soil productive in grain, fruits, and pasturage. Staples, grain, flour, salted provisions, live stock, and many other minor articles sent to the N. York market. Chief town, New Haven. Pop. 1820, 39,616. Ctl. lat. $41^{\circ} 25'$ N. lon. W. C. $4^{\circ} E.$

New Haven, city, seaport, and seat of justice, New Haven city, Conn., situated on the E. side of a bay, formed by the mouth of the Quinnipisk river, and about 4 ms. N. from Long Island Sound.

The old town was laid out in a large square, subdivided into nine lesser squares, each 858 feet each side, separated by 50 feet streets. In the centre are two large squares; SE. of which stands Yale College.

The general aspect of New Haven, is peculiarly pleasing. The site is very nearly a plain, and the streets extending at right angles, with the general neatness of the buildings, and intermixture of trees, affords a picture which every traveller must view with interest.

Of all the public edifices of this city, Yale college decidedly claims the first notice. It was founded in 1701. Its officers are now, a president, nine professors, and five tutors. It is under the government of a board of trustees, composed of the governor of the state, the lieutenant governor, and six senior assistants, together with the president, and 10 clerical fellows. The college buildings, consist of three large and spacious finished, and one unfinished edifice, a chapel and philosophical chamber, a lyceum containing the library and recitation rooms, a laboratory of brick, and a stone dining hall. Connected with the college, is the medical institution, founded in 1813, with four professors, an excellent anatomical museum, and a medical library. The college library amounts to between 7000 and 8000 volumes. The cabinet of minerals was the numerous deposite of Col. George Gibbs, and does honour to the donor, and to the college. Its original cost amounted to above 17,000 dollars.

The whole number of students in 1829, was 412; and, according to Mr. Morse, the entire number educated in this institution from its foundation, was 3178, of whom in 1820, there were still living 1884, more than one half.

An Episcopal seminary was established in 1829, under the government of the general convention of the Episcopal church.

Besides the literary edifices, and the ordinary county buildings, New Haven contains 2 banks, a custom-house, almshouse, 2 insurance offices, a grammar school, an academy, 6 printing offices, issuing 4 weekly newspapers, a religious Monthly Magazine, and Mr. Sullivan's Journal of Science and Arts.

The commercial connexions of this city are numerous and important, particularly in the coasting trade. The harbour is good, though only admitting vessels of 10 or 12 feet draft. Before the erection of a long wharf of nearly a mile, which stretches so far directly across the bay, the harbour was gradually filling up. The amount of shipping owned in the town, is about 12,500 tons.

Amongst the burial grounds of New Haven, one deserves particular notice. It is on an entirely novel plan, laid out in parallelograms, which are again subdivided into family burying places. It is a field lying N. from the town, and being planted with trees, has a very solemn, and even awful effect, when seen either within or without. The monuments are generally of marble. New Jersey, one of the states of the U. S. bounded by N. V. NE., by Hudson river, Staten Island Sound, Raritan Bay, and the Atlantic Ocean E., Atlantic Ocean SE., Delaware Bay SW., and Delaware river, or Penn. W.

Miles.

| | |
|--|-----|
| New Jersey has an exterior limit of the Atlantic Ocean from Cape May to Sandy Hook, of | 130 |
| to interior boundary opposite New York, along Raritan bay, Staten Island Sound, New York bay, and Hudson river | 60 |
| in common with New York, between Hudson and Delaware rivers | 45 |
| thence down Delaware river and bay to Cape May | 220 |
| Total, | 415 |

Extreme length, by a line almost due N. from Cape May to the northern angle on the Delaware, 160 ms., with a mean width of about 45 ms. Between lat. 38° 58', and 41° 21' N. Area 6851 sqns., and 4,381,640 acres.

The natural geography of New Jersey, presents three very marked subdivisions: 1st. a sand alluvion; 2dly, the hilly or middle section; and 3dly, the mountainous or northern section.

The sea sand alluvion, embraces near one half the state. A line drawn from the mouth

of Shrewsbury river to Bordentown, will nearly separate the hilly from the sea sand region. Between this natural limit and the Sussex mountains, the state is delightfully variegated by hill and dale, and well watered. Some of the NW. parts of Hunterdon, Morris, and Bergen counties, are broken into mountain ridges, but the real mountain section of New Jersey is comprised in Sussex city. It must be understood, that in this state, as in Penn., the intervening distance between the respective mountains is generally an arable valley.

By reference to the annexed table of the counties, it will be seen, that nearly one half of the state is occupied by the sea sand alluvion. This latter region, declines gradually from the hills, and before reaching the Atlantic Ocean, spreads into an almost unbroken plain. The soil is nearly divisible by similar limits with the great subdivisions we have noticed. On the sea sand alluvion, it is generally thin and sandy, and in many places marshy. Above the sea sand alluvion where not mountainous, the soil is generally arable and productive, in grain, fruits, and pasturage.

Compared with its lat., extending 2° and 27', no state of the U. S., possesses such wide extremes of climate. The level sandy plains of its southern extension approximate to the climate of S. Virginia, whilst the seasons in Sussex city, present a severity approaching those of Ver. and N. H. The structure of the state, renders the causes of these meteorological phenomena obvious.

The staples of New Jersey, are grain, flour, live stock, salted provisions, iron; and near New York and Philadelphia, an indefinite variety of articles to supply the markets of those cities.

Iron ore is plentifully found and extensively wrought, particularly in Morris city. Iron in bars, and hollow ware are produced in great quantities, and of excellent quality.

Leather and boots, shoes, and saddles, may be considered as forming a large share of the manufactured staples of this state. Newark is emphatically a city remarkable for the quantity and excellence of its shoes. The estimated value of exports in 1810, was upwards of 7,000,000 of dollars. No fair view, however, can be given of either the exports or imports of this state, as its two great marts are Philadelphia and New York. The amount of shipping, is about 35,000 tons.

Surveys and levels have been taken with so much accuracy, as to ascertain the practicability of executing a navigable canal over New Jersey, and a company has long since been incorporated for that purpose. The points intended to be united, are Trenton on the Delaware, and New Brunswick on the Raritan. The route was traced by following the Assumpink so near its source, and thence by a short cut into Stoney brook, a branch of Millstone river, and down the latter and Raritan to tide water. The very erroneous principle adopted of following the natural channels, has tended to discredit the operations of the N. J. canal company.

The distance from Brunswick to Trenton is about 26 ms., and the highest intermediate summit level 50 feet, between the Assumpink

and Stoney brook. It is supposed, however, that a summit level but little exceeding 40 feet can be obtained, by cutting through the confluence of Assumpink and Shippettankin creeks, and Rowley's mill near the confluence of Stoney brook and Millstone river.

An adequate supply of water can be drawn by short feeders from Phillip's springs, Trenton creek, Stoney brook, and Millstone river, all of which are more elevated than the route of the canal, some intermediate sand hills excepted. Sufficient depth of water for a sloop navigation exists at the two intended extremities of the intended canal.

Estimated expenses.

| | |
|---|------------------|
| Digging 28 ms., at 20,000 dollars per mile, | \$560,000 |
| Lockage, 100 feet, probably less, at 1250 dollars per foot, | 125,000 |
| Feeders, purchase of land, and water rights, | 115,000 |
| Total, | \$800,000 |

Upon the importance of the New Jersey canal but one opinion can exist, but, as respects the expenses, it may be doubted whether less than one million of dollars could suffice to effect such an object.

If such an inland communication did exist, it is probable, however, that if the intended transmission of coal from the L. L. and Delaware rivers succeeded, and there is no rational doubt of such success, that such a coal trade alone would, besides the incidental expenses of repairs and superintendence, produce a revenue of more than the interest of \$1,000,000.

For political and other purposes, New Jersey is subdivided into 15 counties. The following table exhibits the relative population with the respective area.

| Counties. | Area, Sqms. | Pop. 1. 20. | To Sqms. |

New Lisbon, flourishing pstv. and seat of justice, Columbiana ctv. Ohio, 35 ms. S. from Warren in Trumbull ctv.; 56 NE. from Pittsburg, and 160 NW. from Columbus. It now contains an elegant suit of city buildings, a bank, two brick meeting houses, 9 or 10 mercantile stores. In 1820 the number of inhabitants was 746. In the vicinity are a furnace, 4 merchant and a saw mill, a paper mill, an extensive woollen factory, a fulling mill, carding machine, and glass factory.

New London, pst. Hillsborough ctv. N. H., 30 ms. NW. from Concord. Pop. 1810, 692, in 1820, 924.

New London, SE. ctv. of Conn., bounded by R. I. E., by Long Island sound S., by Middlesex in ctv. Conn. W., Hartford and Tolland NW., and Windham N. Length 30 ms., mean width 20; area 600 sqms. Connecticut river forms part of its W. boundary; but beside this stream New London ctv. is in a remarkable manner indented with bays and rivers. Quinebaug and Shetucket unite in this city, and form the Thames, which at Chelsea landing below Norwich receives the Vantic, and forms a very fine and spacious entrance for vessels. Between the Connecticut and Thames beside many of minor importance the Niantic bay opens to Waterford. Between the Thames and Pacatuck, the coast is indented by Pequonock, Misfick, Quianhoc, Stonington, and Wickatequack, Pacatuck bounds the ctv. and state to the E. The western, or rather the northwestern part of New London is mountainous, and except some marshes near the sea-coast, the general surface is hilly, but presents a very pleasing aspect. The soil is productive in fruits, grain, and pasturage. Staples, grain, flour, live stock, lumber, fish, &c. Chief town New London. Pop. 1820, 35,943. Lat. 41° 30' N. lon. W. C. 4° 47' E.

New London, pst. city, seaport, and alternately with Norwich, seat of justice for New London ctv. Conn., is situated on the W. side of the Thames, 3 ms. above its mouth, 14 ms. below Norwich, and 42 SE. from Hartford. Lon. W. 4° 0' 48" E. lat. 41° 0' 25" N. Beside the ordinary city buildings it contains 2 banks, a marine insurance office, 2 newspaper printing offices, and 5 or 6 places of public worship. The shipping in 1818 amounted to near 16,000 tons. Having a depth of 6 fathoms water, the harbour is the best in New York and Newport; and is very seldom obstructed by ice. It is defended by forts Trumbull and Griswold, the former on the New London, and latter at Groton, on the opposite side of the river. The narrowness of the Thames renders its blockade easy, which was effected during last war. On a point on the W. side of the harbour is a light house.

New Mexico, territory of the republic of Mexico. This is the most northern of the

Spanish settlements in the interior of North America, and extends to N. lat. 42° , but with indefinite limits to the W. On the S. it is bounded by the states of Coahuila, and Chihuahua; and on the SE. by Coahuila y Texas. Area about 300,000 sqms. Pop. perhaps 180,000.

New Mexico is an ancient Spanish conquest, as early as 1559, under the Viceroy Velasco el Primero, Durango was a military post. Towards the end of the 16th century, the then Viceroy, count de Monterey, sent Juan de Onate, to New Mexico; this general drove away the Indians and peopled the banks of the Rio del Norte. Consequently the establishment of that nation, in New Mexico, has existed more than two hundred years.

The two provinces of New Biscay, and New Mexico, are separated by a desert. This desert crosses the Rio Grande between the Pass del Norte and Albuquerque. The desert of the Muerto, is upwards of 100 ms. wide and destitute of water. "The whole of this country," says Humboldt, "is in general of an alarming state of aridity, for the mountains Delos Mansos, situated to the E. of the road from Durango to Santa Fe, do not give rise to a single brook. Notwithstanding the mildness of the climate, and the progress of industry, a great part of this country as well as old California, and several districts of New Biscay, and the Intendancy of Guadalajara, will never admit of any considerable population." This desert lies in a NE. and NW. direction, and extends from the Pacific Ocean to within 200 ms. SW. of St. Louis in Misu. It is covered in autumn with muriate of soda, common salt, and is every where extremely cold for the climate. See the article *Rio Grande*.

The inhabitants of New Mexico are exposed to the hostile Indians, and live chiefly in towns. They are like those of New Biscay, a bold and daring race of men, continually on horseback. The arid sterility of their soil, and the almost illimitable extent of their savannas, compel them to a pastoral life.

New Mexico, is however with all its defects, a delightful residence. The purity of the air, and the rich scenery of the fertile banks of the rivers, have a fine effect. European grain and fruits grow luxuriantly where the soil is fertile. The dryness of the seasons is favourable to the grape, which is peculiarly delicious in that country. Perhaps in the advance of civilization, the borders of the North American desert may, from its exemption from rain, become remarkable for its rich wines.

New Milford, pst. Litchfield co. Conn., 16 ms. N. of Danbury, and 18 SW. of Litchfield, on the NE. side of Housatonic river. Pop. 1810, 3337, in 1820, 4610.

New Milford, pstv. in tp. of the same name, Susquehanna co. Penn.

New Mills, pstv. Burlington co. N. J., about 5 ms. E. of Mount Holly.

Newnham, corporate town of Eng. in Gloucestershire. It is seated on the Severn, 8 ms. W. of Gloucester, and 11 WNW. of London. Lon $2^{\circ} 23' W$. lat. $51^{\circ} 40' N$.

New Orleans, capital and chief town of the state of Lou., stands upon the left bank of the Mississippi river, at N. lat. 30° and W. lon. W. 90° 5'. It is composed of the city, properly so called, and several *Fauxbourgs* (suburbs) the principal of which are St. Mary's, Annunciation, and La Course. Above the city, Marigny's and Iberville's halves, and Tremé and St. John's in the rear of the city, towards Bayou St. John's.

The city itself is laid out with the streets intersecting each other at right angles. The *Fauxbourgs*, though in general also regular, deviate in some places. Like all other places along the banks of the Mississippi, the ground upon which New Orleans stands, falls by a gentle declivity, from the margin of the river, until depressed into a swamp, or overgrown flat, in the rear of the town. The city and its *Fauxbourgs*, except those of the Tremé and St. John's, stand upon the solid border of land between the river and swamp, the median width of which is 400 yards. The extreme length of New Orleans along the Mississippi is nearly 3 ms. The river running opposite in the form of an S. It contains a state-house, prison, market-house, hospital, principal or town-house, a cathedral, or the church of St. John's, Ursuline convent, an Episcopalian, and a Calvinistic church, two theatres, a court-house, three insurance offices, four banks authorized by the state, a branch of that of the U. S., a custom house, navy yard, arsenal, barracks, and one fort, that of St. Charles, situated between the city proper and *Fauxbourg Marigny*.

New Orleans is situated 105 ms. above the mouth of the Mississippi, 522 by water, and 1567 by land below Natchez, 1189 below St. Louis, 991 below the mouth of the Ohio, and 1933 below the city of Pittsburg.

It is ruled by a mayor and city council, elected by the freeholders.

This city is admirably situated for a commercial depot, having equal facility of intercourse, foreign and domestic. Its markets are excellent, particularly for garden vegetables, and for fruits, both tropical and from the numerous settlements on the various confluent of the Mississippi. The houses and pop. are both rapidly increasing, as may be seen by the following comparative view of its census of 1810 and 1820.

New Orleans was laid out in the spring of 1717, and named in honour of the duke of Orleans, then Regent of France, during the minority of Louis XIV. It remained in the hands of the French until 1769, when, together with all Louisiana, it was taken possession of by the Spanish general O'Reilly. It was again given up by Spain to France in 1803, and on the 20th of December of that year, delivered to the United States by the French colonel, prefect, Laussatt.

The rank and importance of New Orleans, amongst the emporia of the United States, may, in some measure, be seen by the subjoined tables, extracted from the Nat. Int., January 28th, 1825.

Narragansett Bay, bounded by Narragansett Pt., in Mass. E., the Atlantic Ocean to the S., the southern entrance of Narragansett bay to the N., and the northern arm of Narragansett bay to the W. Slope NW. Length 16, width 12 miles. About 10 sq. mi. It is composed of the towns of Narragansett, Conanicut, Aquinnah, and Conanicut. The main part of the bay is about 10 miles long and 12 miles wide. The bay is bounded by Narragansett Pt. to the E., the southern entrance of Narragansett bay to the S., the northern arm of Narragansett bay to the W., and the town of Narragansett to the N.

bay formed by a projection of R. I. proper, and Connecticut Island. Lon. W. from Greenwich, $71^{\circ} 17'$ and E. from Washington, $5^{\circ} 43'$ lat. $41^{\circ} 29'$ N.

The harbour is one of the best on all the Atlantic coast of the U. States, opens before the town into a noble circular basin, easy of access, land-locked on all sides, and commanded by the adjacent heights. Goat Island, a small spot of ground at its outer entrance, contains Fort Wolcott and a U. States' navy hospital. The harbour is also defended by two other forts—Fort Green, and Fort Adams.

Though much declined from its former comparative importance, Newport is still a flourishing town. The site rises by an elegant acclivity from the harbour, and again declines gradually in the rear, giving the aspect of a delightful swell to the whole place.

Newport contains a state-house, market-house, theatre, public library, almshouse, five banks, two insurance companies, 11 places of public worship, four Baptists, two Congregationalists, one Episcopalian, one Friends, one Moravian, one Methodist, and one Jewish Synagogue.

In 1819, the amount of shipping owned in this town, was near 11,000 tons.

The pop. of the town and that part of its vicinity included in the tp. as it stood in 1810, and in 1820, are exhibited in the annexed table.

| | |
|-----------------------------|------|
| In 1810—Whites, | 7277 |

New River, of Eng., for supplying London with water. This river has its rise at Amwell, near Ware, in Herts, and was formed by the great Sir Hugh Middleton, who was obliged, in order to avoid the enclaves and valleys in the way, to make it run a course of about 39 ms., and to carry it over two valleys, in long wooden troughs lined with lead; that at Bushill, being 660 feet in length, and 30 in height, under which is an arch, capacious enough to admit the largest wagon loaded with hay or straw. In short, over and under this river, which sometimes rises thus high, and at others is conveyed under the ground, runs several considerable currents of land waters, and both above and below it a great number of brooks, rills, and water courses have their passage.

• *New Shoreham*. See *Black Island*.

New South Wales, or the Eastern coast of New Holland, extends from Cape York, lat. 15° S., to Cape Hickes lat. 38° S., or through 1870 ms. The coast is followed after an interval of about 60 ms.; by a chain of mountains which have been seen 700 or 800 ms. The slope between the mountains and shore, is found covered by a dense forest of gigantic timber. This mountain system, like that of the Appalachian in the U. S., is not very elevated. Mount York, in New South Wales, the highest peak yet discovered, is only 3200 feet; the breadth of the system 38 ms.

The rivers, which flow from the Blue mountains (the name given to the New South Wales system), are short and unimportant. Those streams which flow westward have been found, as far as explored, to terminate in marshes, and not to reach any sea or lake.

The British have colonized this coast, and have reported the soil as productive, the first colony landed at Botany Bay, January 20th, 1788. The seat of government of this convict colony was subsequently removed to Port Jackson, 12 ms. N. from Botany Bay. Here the town of Sydney was founded, about 7 ms. from the entrance of the bay of Port Jackson, lat. 33° 53' S., and lon. 151° 12' E. See *Botany Bay*.

At the head of the harbor of Port Jackson,

15 ms. above Sydney, Paramatta, another town, has been founded. Windsor, 35 ms. from Sydney; Liverpool 18 ms. a little S. of W. from Sydney; and New Castle, 60 ms. N. from Sydney, are all rising villages. The most northern settlement of this colony is Port Macquarie, lat. 31° 23' S.

If the elements of the original colony are duly estimated, the New South Wales colony, has been pre-eminently successful. See *Sydney*.

The natives are of that human family called Austral Asian negroes. Their hair is black and curled, and their skin a dark sooty black, with regular features. In respect to mental endowment, the New Hollander, is the most rude and uncultivated savage known. It is probable, however, that as in N. America, the natives of New Holland; will disappear before a rising English nation. It is really at once, pleasing and astonishing to behold in less than 40 years, in this remote and desolate region, a colony rising, who already employ upwards of 220,000 dollars in manufactures of various kinds. Establishments have been formed for woollen cloths, hats, earthen-ware, salt, candles, soap, &c. Brewers, tanners, blacksmiths, tinmen, ropemakers, carpenters, and other mechanics abound, and in fine, every thing exhibits the healthful infancy of a nation. In 1818, the pop. amounted to 18,000. It is probable they now amount to 25,000. It ought to be distinctly understood, that the colony of New South Wales, is different from that on Van Dieman's Island.

This village is situated at one point of an intended canal communication between the Susquehanna and St. Lawrence basins. It is very remarkable, that though the vicinity of Newtown is in general hilly, approaching to mountainous, a natural valley extends from Chemung to Seneca lake, the summit level of which is only 59 feet above the level of the Chemung at Newtown, and 885 feet above tide water in Chesapeake bay. The following table will exhibit the respective levels of this route.

Table of ascents and descents from the level of tide water in Delaware river, to the level of Lake Erie at Buffalo, by the route of the Schuylkill, Union Canal, Susquehanna, and Chemung or Tioga river, Newtown creek, Seneca lake and outlet, and the Grand Canal of New-York, from Montezuma to Buffalo.

This great state extends over 46,000 sqms., or 22,140,000 acres

Length from Staten Island, S. point, to N. lat. 45°, 340 ms.; breadth from SW. angle of Massachusetts, to the western boundary 340. Lat. 40° 30' to 45° N.

This state extending over 45° of lat., and intersected by several mountain ridges, presents a great diversity of soil and climate. Though the western parts are less broken than those of the E. and N., yet, the whole state with very partial exceptions, is either hilly or mountainous.

The Hudson river flows from a mountainous region, and is precipitated into a deep valley, at or near its junction with the Mohawk. The Hudson valley is one of the most remarkable phenomena in the hydrography of the United States. From the junction of the Hudson and Mohawk, to Sandy Hook, is a long narrow bay, rather than a river, of 150 ms. in length. In this distance, two chains of mountains are passed. The banks are for the most part abrupt, rising to 2 or 300 feet; in many places, precipitous, as the Basaltic rocks along the right bank above the city of New York, and in many other places above and below the Highlands.

The pass known by the term Highlands, is indeed a very remarkable feature in the geography of the state. Enormous walls of perpendicular rock rise on both banks, to the appalling elevation of more than 1000 feet. Broken into great variety of forms, into deep valleys, intervening between the granite promi-

nences, and the whole covered by a thick forest, affords one of the most impressive landscapes, to be found in North America. Here the great primitive ranges pass the Hudson, and here the ocean tides find the only passage over this boundary into the interior, which exists in the United States.

The Highlands, are in fact, the elongation of the same range which passes through Pennsylvania, by a very humble ridge, dividing Lancaster and Chester cities, in part; the NW. part of Chester from Berks, the NW. part of Montgomery from Berks, and Bucks from Lehigh, and crossing Delaware below Easton, passes through New Jersey, dividing Sussex city from the other parts of the state, enters New York, forming the northwestern parts of Rockland, and the southeastern parts of Orange cities, crossing the Hudson above West Point, at the noted place we have reviewed. This chain continues into Connecticut, Massachusetts, and Vermont, forming in Connecticut, the rugged hills of Litchfield; in Massachusetts, the alpine, but fertile city of Berkshire, and in Vermont, the elevated chain which gives name to that state.

What is known in Virginia, Maryland, and Pennsylvania, by the name of Blue Ridge, or South Mountain, which crosses the Potomac below the mouth of the Shenandoah, the Susquehanna below Harrisburg, and the Delaware below the extreme S. point of Wayne city, at what is called the Water Gap, and following the course of the Delaware river, forms the northwestern border of New Jersey, enters New York, at the mouth of the Nevisink river, or at the NW. angle of New Jersey. The Shawangunk is the termination of this range, W. of the Hudson.

The Kittatinny range, is one of the most remarkable of all those which constitute the Alleghany or Appalachian system. The Kittatinny, though of so much importance, has not been hitherto correctly drawn upon any of our maps. It is the same range, which by several local names, crosses Virginia and Maryland, from the sources of Tennessee and Great Kenhawa, crosses the Potomac below Hancock's town, enters Pennsylvania, crosses the Susquehanna 5 ms. above Harrisburg, runs NE., and finally enters New York, in the NW. part of Sullivan city. The Kaatsbergs is a part, and the most elevated and prominent of the Kittatinny range.

An observation upon the very singular bend in the course of our mountains, ought to be made in this place, as this change of direction takes place in New York.

If we glance upon the map before us, we find the range which forms the Highlands, after passing the Hudson, changes its NE. to a N. course, in Dutchess city, and winding through Massachusetts and Vermont, enters Lower Canada.

The Shawangunk, is most probably continued in the ridges found in the central parts of Dutchess and Columbia cities.

The Kittatinny forming the NW. limit of Sullivan and Ulster cities, in New York, preserves the NE. direction into Greene county, where the range turns rather abruptly to the N. and NW. attains its greatest elevation in

the town of Wyndham. Thence it ranges along the SW. part of Schoharie, the SE. of Otsego, along the southern parts of Herkimer and Montgomery, crosses the Mohawk by the Little Falls, ranges through Herkimer, where it is known by the local name of the Sacondago Mountain. It thence ranges between the Oswegatche and Black rivers, crosses the St. Lawrence by the Thousand Islands.

It has been ignorance of, or inattention to this fact, of their true organization, which has introduced so much confusion in the delineation of our mountains. All the minor chains, E. of the Hudson, pursue a course very nearly N. and S. It has been the erroneously projecting of the mountains of New Hampshire, in a NE. direction, which has placed mountains between Maine and Lower Canada, where none exist. I am inclined to consider the mountains of New Hampshire, extended in a direction very nearly N. from where they leave that state, to be identified with the precipices of Quebec, Montmorency, and the Chaudiere.

I have introduced these remarks in this place, in order to explain the strong features of New York, and the connexion between its natural geography and that of the adjacent places. We now proceed with the local physiognomy of that state.

We have examined the principal mountains which chequer the face of New York, and we have shown that the greatest part of its surface is uneven. The only level tracts are, the eastern margin of Long Island, a narrow strip along the S. side of Lake Ontario, and a few confined alluvial bottoms along some of the smaller rivers and creeks. The most marshy part of New York, lies in the angle between Lake Champlain, and the St. Lawrence river.

It must be obvious that the climate phenomena of New York, must be very strongly marked.

See *Long Island*, and for detailed description, the respective counties.

In a general view of New York, after its natural Geography is surveyed, the next most prominent object it presents, is its two great canals. The following descriptions of that uniting Hudson river with Lake Erie, was transmitted to the editor of the *Gazetteer* by Governor Clinton, and Benjamin Wright, Esq. I thought they involve some little repetition, I am induced to give them insertion from the authenticity of their contents, and from the primary importance of the object.

And first, the Erie Canal.—This canal extends from Lake Erie at the mouth of Buffalo creek, to the Hudson at Albany, a distance of 60 ms. It is 40 feet wide on the surface of the water, 28 feet at bottom, and four feet deep; commencing at Buffalo creek near its mouth, it passes along near the shore of the lake and Niagara river to Black Rock, a distance of 2 ms., where it comes close to the shore of the river, and passing along that shore for 10 ms.; it then intersects the Tonawanda creek a short distance from its confluence with the Niagara river. At this distance it has a descent of six inches, half an inch to the mile. To raise the creek to the level of the canal, a dam four feet six inches high is thrown across the creek a little

distance below the point of junction with the canal. The channel of the creek is then used as the canal, and a towing path constructed along its bank for 12 ms., (the creek in its natural state having but one foot fall in that distance.) From this point a cut across what is called the Mountain Ridge, northeasterly of 7 ms. and a half is made; and one part is 30 feet deep, and including 3 ms. of Rock:—In this deep cut a descent of one inch to the mile is given to the canal to the brow of the mountain (so called) joining the great basin of Lake Ontario, and which is the range of highlands, called the Lewistown, or Queenstown Heights, on the Niagara river. Here it descends 60 feet by means of five combined and double locks of 12 feet each; after descending it passes on easterly, with a descent of half an inch to the mile for 63 ms. to the Genesee river, over which it passes by a stone aqueduct of 600 feet in length, consisting of nine arches of 30 feet span each, and two of 40 feet each to convey water to mills; the arches being a segment of a circle of 11 feet rise; after passing the Genesee and continuing easterly about 2 ms., descent by a lock of seven feet forty one-hundredths; then a level of 70 chains, and another lock of the same descent—then a pound of 15 chains and another lock of the same descent—then a pound of 18 chains and another lock of the same descent—then a pound of 37 chains and another lock of the same descent—a level or pound then commences, which extends eight and a half ms., to one mile E. of Pittsford—then a lock of eight feet descent; thence over the high embankments about the Irondequoit, and the same level continued for 14 ms. to the W. part of the town of Palmyra—then a lock of 10 feet descent—thence level half a mile, then a lock descent 10 feet—then easterly over Mud creek, and passing the town or village of Palmyra a level of 12 ms.—then a descent of 34 feet by three locks separated so as to form pounds of 200 yards between each, thence a level of six ms. to Mud creek, over which it passes by a stone aqueduct of three arches of 30 feet each, and then descends by a lock of 10 feet—then level one mile and a half to the village of Lyons, passing the same, and having a descent by a lock of six feet; thence level 4 ms. and a half and a lock of seven feet descent—thence level 4 ms. to the village of Clyde, a lock of five feet descent—thence level 5 ms. to the western edge of the Great Cayuga Marshes, and then a lock of nine feet descent to the level of the surface of Seneca river—this level continues six and a half ms., passing through the Seneca river on its natural level to the E. side thereof—here a lock of seven feet rise to the village of Montezuma—thence level one mile and a half to a lock of nine feet rise—thence level 4 ms., and crossing the Ontario outlet by an aqueduct of four arches of 20 feet each, to a lock of nine feet rise—thence level 11½ ms. to a lock of 11 feet rise (at Jordan) which is connected with an aqueduct of three arches of 20 feet each—the Jordan summit extends 12 ms. and the canal then descends by a lock of 11 feet and which is connected with an aqueduct of two arches of 30 feet each—thence level 7 ms. and a lock of six feet descent which brings you to the Salina

Level [here a branch of one mile and a half connects the canal with the salt works on the Onondaga lake] which crosses the Onondaga creek by an aqueduct of four arches of 30 feet each—thence level one mile and a half to a lock of six feet rise—thence level one mile to two locks of 10 feet rise each with a small pound between—thence level 69 ms., passing through the town of Manlius in Onondaga city,—the towns of Sullivan and Lennox in Madison city., the towns of Verona, Rome, Whitestown and Utica in Oneida city., and through the greater part of the town of Frankfort in Herkimer city. to a lock of eight feet descent 9 ms. E. of Utica—then a level one mile to a lock of eight feet descent—thence level half a mile to a lock of eight feet descent—thence level two and a half ms. to a lock of eight feet descent—thence level a quarter of a mile to a lock of eight feet descent—thence level one mile and a half to a lock at German Flats, nine feet descent into the old canal (constructed by the Western Inland Lock Navigation Company in 1798,) and following the old canal half a mile, and then leaving it and continuing the same level for 3 ms. to a lock of eight feet descent—thence level three ms. and a half to the head of the Little Falls (town of German Flats) thence descending the declivity at Little Falls by five locks of eight feet descent each, and placed so as to form ponds between, of sufficient length for boats to pass each other—thence level 3 ms. to a lock of eight feet descent—thence level 4 ms. to a lock of eight feet descent—thence level three ms. and a quarter to a lock of eight feet descent—thence level four ms. and three quarters to a lock of seven feet descent, near Esquago creek, town of Canajoharie—thence three ms. and a quarter (to Canajoharie village) a lock of six feet descent—thence level 32 ms. to a lock of seven feet descent—thence level to the W. bank of Schoharie creek four ms. and a half, then a lock of six feet descent—thence across the creek in a pond formed by a dam (a grand lock on E. Bank) thence level three quarters of a mile to a lock of four feet descent—thence level 3 ms. to a lock of eight feet descent—thence level four ms. and a quarter to two locks of eight feet descent—thence level 4 ms. to a lock of eight feet descent—thence level 1 ms. to a lock of eight feet descent—thence a further distance of 3 ms. to a lock of eight feet descent—thence level half a mile to a lock of eight feet descent—thence level 3 ms. to Schenectady, and continuing the same level 4 ms. below the last mentioned place to an aqueduct 850 feet long and 21 feet above low water of the river, and immediately after crossing the river it descends 12 feet by three locks of seven feet each, with short pounds between—thence level 2 ms. to a lock of seven feet descent—thence a level of one mile and a half to a lock of seven feet descent—thence level three ms. and a half to a lock of seven feet descent—thence level 8 ms., and passing the Mohawk by an aqueduct 1150 feet long, and 16 feet above the river to four locks descent 32 feet with short pounds between—thence level one mile and a quarter (say a quarter of a mile below Cohoes falls) to two locks descent 18 feet—thence a quarter of a

mile level and three locks descent 26 feet—thence level half a mile and seven locks with short pounds between descent 56 feet—here a feeder or branch of the Northern canal connects with the Western canal, which soon descends 22 feet by two locks—thence level 7 ms. to a lock of 11 feet descent—thence one mile and a half level to a point nearly E. of the State arsenal in the N. part of the city of Albany—here a lock of 11 feet descent connects the canal with the Hudson river. Opposite the city of Troy a branch connects with the Hudson by two locks of 11 feet descent each—also at Little Falls on the Mohawk, a large aqueduct over the Mohawk with three arches, one 70 feet chord, and two of 50 each, to connect the old and new canal, and to operate as a feeder, this is a most permanent, solid and durable work, and built of the best materials, and the best workmanship.

Such is the Great Erie Canal, now completed, and in full operation as a channel of commercial inter-communication.

The Champlain canal is 22 ms. long from Whitehall, at the head of Lake Champlain, to Fort Edward on the Hudson.

The valley of the Hudson rises by a more gradual acclivity, than does that of the Mohawk. From the level of low tide in the Hudson river, to a point on that stream, one mile and a quarter above Waterford, the bed of the river rises about 35 feet, to render which passable, five locks are designed. Ascending 83 ms. higher to a point between the mouth of Anthony's Kill and Ho-sack river, another rise of nearly 53 feet takes place, in which distance, the construction of 7 locks is contemplated.

These 12 locks and 88 feet attain a summit upon which the canal will be carried 18 ms. on one level to the falls, at Fort Miller. Here a rise of 16 feet is overcome by 2 locks. A dam above these locks and falls, again produces a slack water of 16 ms to another fall at Fort Edward. By 4 locks, and 36 feet ascent, the elevation of 140 feet, on the summit level, between Lake Champlain and Hudson's river is attained. Along this summit level, the canal is cut 12 ms. to Cape Anne upon Wood creek, a

branch of Pawlet river, flowing into Lake Champlain.

At Cape Anne, the slope commences towards Lake Champlain, and by a rapid dépression of 26½ feet, and 3 locks, reaches another level 12 ms. in length, reaching Whitehall at the mouth of Pawlet river. At the latter place 3 more locks descend 26 feet into Lake Champlain.

The Champlain canal is nearly completed; it is indeed already navigable; but, contrary to the opinion of the commissioners in their report of January 31st, 1818, it is now found necessary to introduce a feeder from the Hudson, above Glen's Falls, and as this source will be above the summit level, every section of the canal will be amply supplied.

By a resolution of the board of commissioners in 1818, the Erie canal was extended to 40 feet width at the surface, 28 at the bottom, and four deep of water. The locks were to be made 14 feet wide, and 50 long in the clear. By a subsequent order of the board, similar dimensions were given to the canal and locks, between Albany and Lake Champlain.

In some instances, from the nature of the document, round numbers have been necessarily used, but, we believe, not to any extent which can very seriously affect the general correctness of the statement. The importance of the subject has rendered some amplification necessary.

Table of the area of those parts of the U. States and Canada, which will most certainly be opened to the commerce of the Hudson, by the completion of the two New York canals.

This expanse nearly equals four times the superficies of the state of New York. Though more than one-third of the space we are surveying is in Canada, it may be here correctly included, as the course of commerce will be but little influenced by national boundaries.

The following tables exhibit the general, detailed, and progressive pop. of N. Y.

It is a remarkable fact, that the pop. of the cities of N. Y. and Philadelphia, have generally maintained a proportion of about one-tenth to

that of the respective states. The proportion varies in approximation to absolute exactness, it is true, but has been sufficiently regular to afford a very interesting series in the progressive pop. of these great sections of the U. S.

New York, city and cty. of New York, situated on Manhattan island, between Hudson river, East river, New York bay, and Haerlem river. Lat. 40° 42' N. and lon. 74° W. from London, and 3° E. from Washington, 143 ms. below Albany, 90 NE. from Philadelphia, and 210 SW. from Boston

The city and cty. of N. Y. are commensurate, and occupy the whole of Manhattan island, which is about 12 ms. long, and averages 13 wide, with an area of 18 sqms.

The city of N. Y., is composed of the city proper and Greenwich. The compactly built part commences at the battery, or point of confluence between the Hudson and East rivers, and gradually becoming more scattered, the buildings extend between 3 and 4 ms. up each river. The streets in the lower, or ancient part, are generally irregular; but the more modern streets are generally straight, and intersecting each other at right angles. The boast of N. Y., and perhaps the U. S., is Broadway, extending 80 feet wide, upwards of 3 ms. No style of building can be noticed as characteristic of N. Y. The private buildings vary, from the old, heavy, Dutch mode, to the utmost refinement and convenience of modern taste.

The City Hall claims the first notice amongst the public edifices of this city. It is 216 feet by 105; and 65 feet high. The front and ends are constructed of white marble, as are the columns in the inside and front. The expense of the entire structure upwards of \$500,000. It is occupied by the courts of law, and the city council. The governor of the state for the time being, has also, a room of audience in the second story. This room is decorated with portraits of distinguished Americans.

The N. Y. general Hospital, comprises a hospital for sick and disabled persons; as also a lunatic, and lying in hospital. A medical library, containing between three and four thousand volumes, is attached to this institution. The alms-house is situated on East river, above Corlaers Hook. It is a spacious but plain edifice, three stories high, 320 by 50 feet. It comprises a work-house, penitentiary, &c., and cost about \$420,000. The state prison is on the Hudson, in Greenwich.

In the rear of the City Hall stands the Institution, a long range of brick buildings, containing the Museum, Lyceum of Natural History; Halls of the Philosophical and Historical Societies; the Deaf and Dumb Asylum; and the American Academy of the Fine Arts. The Historical Society has also a room for its truly valuable library, of upwards of 5000 volumes. The Museum is in the end room fronting Broadway.

Columbia College, King's College before the revolution, was founded in 1754; it has a president, five professors, and at present, 1825, about 130 students.

The College of Physicians and Surgeons, was founded in 1807; and in 1814, the Faculty of Medicine, was detached from Columbia College.

and annexed to it. Thus united, the College of Physicians and Surgeons has become one of the most respectable foundations in the U. S., with seven professors. The Elgin Botanic Garden has been attached also to this institution.

The Theological Seminary formed in 1805, in this city, by the General Synod of the Associate Reformed Church, has been removed to Princeton, and connected with the Theological Seminary at the latter place.

N. Y. possesses a theatre, custom-house, eight or nine market-houses, eleven banks, and eleven insurance companies; a society library containing upwards of 15,000 volumes. The number of daily, semi-weekly, and weekly newspapers, literary journals, magazines, &c. are very considerable. The places of public worship amount to near sixty. Many of the churches are spacious and elegant structures.

In its exterior N. Y. has the most imposing appearance of any city in the U. S. The view from the Battery of the harbour, Staten Island, and the adjacent shores of Long Island and N. J. has been very justly admired by almost every visitant. The harbour, or more correctly harbours of N. Y., are sufficiently extensive to admit the most numerous assemblage of shipping, and of sufficient depth to admit vessels of nearly the largest class. Being open to the sea it is only in very severe winters rendered inaccessible by ice. The principal mercantile harbour is that of East river; but the whole shore around from Corlaers Hook to Greenwich is generally accommodated with docks, for vessels of various descriptions. Beside packets, numerous team, and steam boats, ply across the respective ferries from N. Y., to Long Island, Staten Island and N. J. Regular lines of steam packets, run from that city to New Brunswick, the various towns on the Hudson, as high as Albany, and to Providence, R. I.

It is in fine a city combining perhaps as many natural advantages as any other on the globe; its position is admirably adapted to connect the foreign commerce and inland trade of the U. S. The two great canals uniting the basin of the Hudson to that of St. Lawrence, by two very important points of contact, will add undeniably to the already vast advantages of this great emporium. It is an astonishing fact that N. Y. is now the second city in the world in point of shipping tonnage, possessing more than one half as much as the city of London. In 1816, it amounted to near 300,000 tons. The annual custom-house receipts of this city amount to about one-fourth part of the entire revenue of the U. S. The revenue of the city itself, amounts to near \$500,000 annually.

The following tables present the aggregate and progressive pop. of N. Y.

Albany, small pst. Albemarle cty. Virg. 3 ms. W. from Charlotte.

New York, village, Champaign cty. Ohio.

New York, pstv. Montgomery cty. Tenn., 111 ms. NW. from Murfreesborough

New Zealand, two large islands, in the South Pacific ocean, divided from each other by a strait of about 12 ms. wide. They are each about 600 ms. long, and with a mean width of about 160. Lon. from 181° to 194°, lat. 34° to 38° S. The aborigines are savages. The British government has formed one or two settlements, in which attempts are making to introduce the arts of civilized life among the natives.

Newland, town of Eng. in Suffolk, with a manufacture of says, and bays. It is seated on the Stour, over which is a bridge, 16 ms. SW. of Ipswich, and 57 NE. of London. Lon. 1° 5' E. lat. 52° 1' N.

Nyitraacht, town of Upper Hungary, capital of a cty. of the same name, with a bishop's see. It is seated on the Neytra, 40 ms. NE. of Presburg. Lon. 17° 49' E. lat. 48° 28' N.

Nazpique, river of Lou., the W. branch of the Mermentau. It rises about 40 ms. NW. from the town of St Landré, in Opelousas, flows S. and joins the Plaquemine Brué, to form the Mermentau.

Nyan-King-fen, the capital of the western part of the province of Kiang-nan in China; its situation is delightful. All the country belong-

ing to it is level, pleasant, and fertile. It has under its jurisdiction only six cities of the third class. Lon 116° 45' E. lat. 50° 35' N.

Nyan-bo-fou, rich and populous city of China, in the province of Hon-Quang, containing in its district, two cities of the second, and five of the third class. It is 425 ms. W. by S. of Nanking.

Niagara, river of North America, between lakes Erie and Ontario. It is, strictly speaking, a strait uniting the two lakes.

It commences by a rapid, 2 ms. NNW from the town of Buffalo. The rapid terminates at or a little below Black Rock, and assuming a placid current, with a width from half to one and a half mile, the river flows from Black Rock to the head of Grand Isle, 7 ms. with a course nearly NW. Here it divides into two large branches, which, encircling Grand Isle, again re-join 3 ms. above the falls. Now upwards of a mile wide, and gradually contracting in breadth, and increasing in velocity, the whole mass approaches the great ledge, which forms the tremendous cataract of Niagara.

This ledge is itself a part of the vast floetz strata, which stretches along the southern shores of lake Ontario, crosses Niagara river, and reaches to an unknown distance into Canada.

Below Grand Isle, the river turns to a course of nearly W., which it continues to the falls, where it abruptly curves to NE., which it continues about a mile, from whence it assumes a northern direction, which with some partial bends it continues to lake Ontario. See the succeeding article, *Niagara Falls*.

Niagara Falls, is a cataract in Niagara river, formed by the intersection with that stream of the great ledge, noticed in the article *Niagara river*.

The following table exhibits the entire length of Niagara river, and the respective fall from Erie to Ontario.

| | Miles. Fall. | |
|---|--------------|--------|
| From lake Erie to the head of the rapids, | 20 | 15 ft. |
| From the rapids to the head of the fall, | 1½ | 51 |
| Great fall, | - | 162 |
| From falls to Lewistown, | 7 | 104 |
| From Lewistown to lake Ontario, | 7 | 2 |
| Entire distance and fall, | 35½ | 334. |

Standing on either side of Niagara river above the Falls, the aspect of the adjacent country is that of a general level. Nothing announces an approach to the cataract, except the spray and cloud of vapour which rises from the surge below.

The water is precipitated over an immense mass of limestone rock, which forms the bed of the river. The width of the river in a straight line, at the falls, is three-fourths of a mile. But as its principal force is exerted in the centre, the brow of the precipice has been worn in the shape of a horse-shoe, and its whole winding width is not less than a mile and a half. This distance is divided by a small woody island, called Goat Island, near the American side, which divides the cataract into two. The ele-

vation of this island above the surface of the stream is not very great, but it presents towards the NW. a bold perpendicular front of bare solid rock, the whole height of the cataract. The width of the fall between Goat Island and the American side is about one-fifth of the whole, and that of the island itself another fifth; although the quantity of water on the British side is probably ten times as great as on the other. A bridge now connects the New York shore to Goat Island.

The Table Rock is a part of the Canada bank, which is on the margin of the great sheet of falling water. It furnishes altogether the most interesting view of the falls. The eye, looking up the river, beholds it tumbling with wild magnificence over the ledges of rocks, which, seen from this place, seem close together, and appear to constitute a single broken cataract. The immense mass of waters, greatly increased in its rapidity by this descent, and perhaps still more by the contraction of the river, rolls with an apparently instantaneous motion to the brow of the precipice, and shoots over it into the abyss below. The depth of the precipice, the roar of the cataract, the mass of the waters, and above all, the inconceivable exertion of power, overwhelm the mind with emotions of sublimity and grandeur; and fill it with new and clearer views of the weakness and littleness of man.

From the surface of the stream beneath, on the Canada side, there arises a thick and constant cloud of vapour, which mounts above the precipice to the height of more than 100 feet. In clear weather, three primary rainbows are frequently visible at once in various parts of this cloud. These, when the sun is near the horizon, appear complete semicircles, and are often of singular lustre and beauty. Beneath the fall lies a thick mass of foam, which for a great extent, covers the surface of the water. The banks of the river below are on both sides perpendicular, of solid rock, and of the same height with those above the fall. They continue of this height 7 ms. to Queenstown. Here the cataract is supposed to have commenced after the deluge, and from this place to have worn its way backward to its present spot. No one who examines the ground will doubt for a moment that this has been the case; and those who have lived for 20 years on the bank, all attest this retrograde motion. These falls are in lat. 43° 5' N.

The following comparative table exhibits the relative heights of the most remarkable cataracts.

Niagara, Qy. N. Y., bounded by Niagara river W., Lake Ontario N., Genesee cty. E., and Tonawanta or Erie S. Length 33 ms., mean

width 20; area 660 sqns. Surface generally hilly, though some tracts of level, and even marshy land, skirt Lake Ontario and the Niagara river. The ridge which forms the cataract of Niagara, occupies the middle part of this city, from W. to E. Soil productive in grain and pasturage. The Erie canal passes through its SE. angle. Chief town, Lewistown. Pop. 22,990. This, however, includes Erie city, as the latter was taken from Niagara city, since 1820. Ctl. lat. $40^{\circ} 13' N.$ lon. W. C. $1^{\circ} 47' W.$

Niagara, town and fort, Niagara city, N. Y., at the discharge of Niagara river into lake Ontario. Lon. W. C. $2^{\circ} 6' W.$ lat. $43^{\circ} 14' N.$ Pop. 1820, 484.

Niagara Falls, psto. 325 ms. a little N. of W. from Albany, and 20 ms. N. from Buffalo.

Nias, small island in the East Indies, at the W. end of Sumatra. Lon. $97^{\circ} E.$ lat. $1^{\circ} 10' N.$

Nibana, town of Italy, in the duchy of Parma, 57 ms. W. of Parma. Lon. $10^{\circ} E.$ lat. $45^{\circ} 5' N.$

Nienburg, city of Persia, and the largest and richest in Korasan, famous for a mine of turquoise-stones in its neighbourhood. It is 37 ms. S. of Mesched. Lon. $57^{\circ} 48' E.$ lat. $30^{\circ} 36' N.$

Nicaragua, province of N. America, in Guatemala, or Central America, bounded on the N. by Honduras, on the E. by the Atlantic Ocean, on the SE. by Costa Rica, and on the SW. by the S. Pacific Ocean, being about 450 ms. from E. to W. and 120 from N. to S. It is one of the most fruitful provinces of Central America, and is well watered by lakes and rivers. The air is temperate and wholesome, and the country produces plenty of sugar, cochineal, and fine chocolate. Leon de Nicaragua is the capital.

Nicaragua, lake of N. America, between a province of the same name and Costa Rica. It is 200 ms. in circumference, has some islands in it, and stretching from the city of Leon NW. to SE., communicates with the Atlantic Ocean by the river St. Juan.

Nicaria, island of the Archipelago, between Samos and Ima, anciently called Icaria, 30 ms. in circumference. The inhabitants are of the Greek religion, about 2000 in number, apply themselves to swimming and diving for sponges, and for goods lost by shipwreck. Lon. $26^{\circ} 39' E.$ lat. $37^{\circ} 40' N.$

Nicastro, episcopal town of Naples, in Calabria Ulteriore, 17 ms. S. of Cosenza. Lon. $16^{\circ} 21' E.$ lat. $39^{\circ} 3' N.$

Nice, city of Italy, bounded on the W. by the river Var and the maritime Alps, which divide it from France, on the N. by Piedmont, on the E. by the territories of Genoa, and on the S. by the Mediterranean. It was anciently an appendage of Provence, in France, but has for many years belonged to the king of Sardinia. The inhabitants supply Genoa with timber for ship-building, and carry on a trade in paper, and other articles. It is 60 ms. long and 50 broad, and contains about 125,000 inhabitants.

Nica, ancient and considerable city of Italy, capital of a city of the same name. It is of a triangular form, and confined in its situation, having a high rock on the E., the river Paglion on the W., and the Mediterranean on the S.; from which last it is separated by a beautiful and extensive terrace, used as a public walk.

The harbour is on the E. side of the rock, and called Limpia, from a small river that falls into it. The exports are silk, sweet oil, wine, cordials, rice, oranges, lemons, and all sorts of dried fruits. It is four ms. E. of the mouth of the Var, and 83 S. by W. of Turin. Lon. $7^{\circ} 25' E.$ lat. $43^{\circ} 42' N.$

Nice, city of Asia. See *Isnic*.

Nicholas, St., town of France, in the department of Meurthe, and late province of Lorraine, with a handsome church, dedicated to St. Nicholas, to which pilgrims formerly resorted from all quarters. It is seated on the Meurthe, 5 ms. SE. of Nancy, and 265 E. Paris.

Nicholas, St., seaport in Russia, in the government of Archangel, seated at the mouth of the Dwina, on the White Sea, 6 ms. S. of Archangel.

Nicholas, St., or *Mole St. Nicholas*, town, harbour, and cape of the West Indies, at the NW. extremity of St. Domingo, commanding the strait called the Windward Passage. The harbour is very capacious at the entrance, and ships of any burden may ride anchor in the basin, during the greatest storm. It was taken by the English, aided by the French royalists in 1793. Lon. $73^{\circ} 20' W.$ lat. $19^{\circ} 15' N.$

Nichols, city, Virg., bounded by Bath NE. and E., Monroe SE. and S., and by Greenbrier W. and NW. Greenbrier passes through this city, from NE. to SW., dividing it into two nearly equal sections. Surface very hilly and mountainous. Chief town, Lewishung. Length 46 ms., mean width 20, area 860 sqns. Pop. 1820, 1853. Ctl. lat. $38^{\circ} 20' N.$ lon. W. C. $3^{\circ} 46' W.$

Nicholas, C. H. and psto Nicholas city, Virg., by pstrd. 325 ms. SW. by W. from W. C., and 277 NW. by W. from Richmond.

Nicholas, city, Kent, bounded by Bath SE., Bourdon SW., Harrison W., Bracken NW., Mason NE., and Fleming E. Length 30 ms., mean width 12; area 500 sqns. Chief towns, Ellistown, Millersville, and Carlisle. Pop. 1820, 787. Ctl. lat. $38^{\circ} 36' N.$ lon. W. C. $6^{\circ} 42' W.$

Nicholasville, pst. and capital, Jessamine city, Kent, 15 ms. SW. from Lexington, and 30 SSE. from Frankfort.

Nieckburg, town of Germany, in Moravia, with a castle, 27 ms. N. of Vienna.

Nieobar Islands, several islands at the entrance of the Gulf of Bengal. They are almost entirely uncultivated, but the coconut, the melloiro, or lerman (a kind of bitter fruit), and other tropical fruits, grow spontaneously to the greatest perfection. The inhabitants are said to be a harmless sort of people, low in stature, but very well made, and surprisingly active and strong. They are naturally good humoured and gay, and are very fond of sitting at table with Europeans, and eat most enormously. There subsists among them a perfect equality. A few aged people have a little more respect paid them, but there is no appearance of authority over one another. These islands extend northward from the N. point of Sumatra. The largest of them, which gives name to the rest, is 40 ms. in length, and 15 in breadth. Its S. extremity in lon. $94^{\circ} 27' E.$ lat. $8^{\circ} N.$

Nicojack, remarkable cave, or cavern of the Lookout mountain, in the Cherokee country, out of which flows an immense stream of water. It is about one mile and a half from Tennessee.

river, and near where the boundaries of Georgia and Alabama reach that stream.

Nicolagef, city of Russia, in the government of Catharinenski, founded by Catharine II., on the S. side of the Ingul, at its conflux with the Bog. The public buildings, and a number of private houses are constructed of a white calcareous stone, but the rest of the houses are of wood. This place being of easier access by water for vessels than Cherson, it is now the capital of the naval establishment of the Black Sea. The admiralty, with a long line of magazines, workshops, wet and dry docks, and every necessary department for shipping, are placed along the banks of the Ingul. It is 30 ms. NNE. of Gezakov, and 45 NW. of Cherson. Lon. $30^{\circ} 46' E.$ lat. $46^{\circ} 58' N.$

Nicholas, St., one of the largest of the Cape de Verd Islands, between St. Lucia and St. Jago. It is 75 ms. in length, and the land is stony, mountainous, and barren. Lon. $14^{\circ} 10' W.$ lat. $16^{\circ} 32' N.$

Nicolet, river of L. C., rises in Buckingham city, by two sources, which flow NW. between Becancour and St. Francis rivers, unite about 50 ms., and fall into the lower end of Lake St. Peter, 10 ms. above Three Rivers.

Nicolet, seignory Buckingham city, L. C., on Lake St. Peter and on both sides of Nicolet river.

Nicolo, St., the most considerable and most populous town of the isle of Tremeti, in the Gulf of Venice. It has a harbour, defended by a fortress, in which is an abbey and a church. Lon. $15^{\circ} 37' E.$ lat. $42^{\circ} 10' N.$

Nicomedia, town of Turkey in Asia, in Naton, now called Ischlisch, or Schmit. It was formerly a large place, as appears by the fine ruins, and now contains 30,000 inhabitants, who consist of Greeks, Armenians, and Turks. It is still a place of consequence, and carries on a trade in silk, cotton, glass and earthenware. It is the see of a Greek archbishop, and is 50 ms. SW. of Constantinople. Lon. $29^{\circ} 30' E.$ lat. $40^{\circ} 30' N.$

Nicopoli, town of European Turkey, in Bulgaria, famous for a battle fought between the Turks and Christians, in 1396, when the emperor Sigismund was defeated, and had 20,000 men killed. It is seated on the Danube, at the influx of the Osma, 60 ms. SW. of Bucharest, and 150 NW. of Adrianople. Lon. $25^{\circ} 43' E.$ lat. $44^{\circ} 16' N.$

Nicopoli, ancient town of Armenia, built by Pompey the Great, in memory of a victory gained over Mithridates. It is seated on the Gerauna, 165 ms. SW. of Erzerum. Lon. $37^{\circ} 55' E.$ lat. $38^{\circ} 15' N.$

Nicosia, strong town, capital of the island of Cyprus, and the residence of a Turkish bashaw, delightfully seated between the mountain Olympus, and a chain of other mountains. It was formerly well fortified by the Venetians, but now the works are in ruins. It is 3 ms. in circumference; and there are plantations of olives, almonds, lemons, oranges, mulberries, and cypress-trees, interspersed among the houses, which give the town a delightful appearance. The church of St. Sophia is an old Gothic structure, which the Turks have turned into a mosque, and destroyed the ornaments.

It is of 100 ms. W. of Tripoli, and 160 SW. of Aleppo. Lon. $54^{\circ} 45' E.$ lat. $34^{\circ} 54' N.$

Nicosia, town of Sicily, in Val di Demona, 12 ms. S. of Cefalù.

Nicotera, town of Naples, in Calabria Ulteriore, near the coast of the Mediterranean, 35 ms. NNE. of Reggio, and 185 SE. of Naples. Lon. $16^{\circ} 30' E.$ lat. $38^{\circ} 34' N.$

Nicoya, town of Central America, in Costa Rica, situate on the Dispensa, which runs into the Bay of Solinas, where there is a pearl fishery. It is 98 ms. WNW. of Cartago. Lon. $85^{\circ} 40' W.$ lat. $10^{\circ} 40' N.$

Nicsara, town of Asiatic Turkey, in Caramania, and an archbishop's see, 10 ms. N. of Tocat. Lon. $36^{\circ} 9' E.$ lat. $39^{\circ} 25' N.$

Niden, town of Switzerland, capital of a bailiwick, in the canton of Bern, with a castle; situate on the Lake of Biel, 15 NW. of Bern.

Nidda, town of Germany, in Wetteravia, seated on a river of the same name, 20 ms. NE. of Frankfurt.

Nideckan, town of Germany, in the circle of Westphalia, and dutchy of Juliers. It is situated on, and surrounded by rocks, and is 13 ms. SSE. of Juliers. Lon. $6^{\circ} 16' E.$ lat. $50^{\circ} 46' N.$

Nijibabad, small town of Hindoestan Proper, 80 ms. NNE. of Delhi. Lon. $78^{\circ} 41' E.$ lat. $27^{\circ} 35' N.$

Niebla, town of Spain, in Andalusia, seated on the Rio Tinto, 40 ms. W. of Seville. Lon. $5^{\circ} 36' W.$ lat. $37^{\circ} 26' N.$

Niederbieber, village of Germany, in the principality of Wied, 3 ms. from Neuwied. Many valuable antiquities, and the traces of a Roman city, were discovered here in 1791.

Niemecz, strong town of Moldavia, between Soczoway and Brassaw, being 25 ms. from each. Lon. $26^{\circ} 16' E.$ lat. $48^{\circ} 58' N.$

Niemen, large river of Poland, which rises in Lithuania, and passes by Běliza, and Grodna; it afterwards runs through part of Samogitia, and Eastern Prussia, where it falls into the arm of the sea, called the Curisch-haff, by several mouths; of which the most northern is called the Russ, being the name of the town it passes by. It is united to the Dnieper by the canal of Oginski. See *Oginski*. Below the junction of the Niemen and Vilia, the united stream is generally known as the Memel. The comparative length of the Memel, by either branch is about 250 ms.

Nienburg, town of Germany, in the circle of Lower Saxony, in the dutchy of Brunswick-Lunenbourg, with a strong castle. It carries on a considerable trade in corn and wood; and is a rich and strong town, seated on the Weser, 30 ms. NW. of Hanover, and 57 SE. of Bremen. Lon. $9^{\circ} 26' E.$ lat. $52^{\circ} 45' N.$

Nien Cister, town of Lower Saxony, in the bishopric of Schwerin, 3 ms. E. of Wismar.

Niger, large river of Africa, formerly very little known. In order to ascertain the rise, course, and termination of the Niger, Mr. Parke was sent out by the African Association, in 1795. The course of the river, which was formerly supposed to be from E. to W., has been determined by Mr. Parke, to flow N. through the country of Mandinga, and then to take an easterly course through the Kingdoms of Timbura, Tombuctoo, Tessa, and Ghana, where it divides into several branches. The Moors and Arabs call it Neel, or river of Slaves, and Neel Kibeer, or Great River. In the rainy season it swells above its banks, and floods the adjacent lands. Since the expeditions of Mr. Parke, several subsequent ones have been fitted out by the British government to explore this stream, and to determine its course and point of discharge. All those expeditions have proved unfortunate and abortive, as to the main object of research. It is, however, a subject of no reasonable doubt, that it flows into the Atlantic Ocean. Its connexion with the Nile, is rejected by the best geographers. The singular obscurity and contradictions respecting this great stream, which prevail in our books, are reproachful to modern science. In 1819, the author of this article, wrote a memoir to show the probability that the Niger had its outlet in the Atlantic Ocean. This memoir was published in the American Magazine, the following is a brief outline of the arguments there used. Examining a map of northern and central Africa, we perceive the Niger flowing from the Kong mountains, having its sources about lon. $7^{\circ} W.$ of London, and lat. $12^{\circ} N.$ Pursuing a course of NE. by E. to Tombuctoo, (in lat. $16^{\circ} 30' N.$, and $1^{\circ} 30' E.$ of London. Below Tombuctoo, this now considerable stream inclines eastward, gradually inflecting to the S., continues through upwards of 20° of lon., is finally lost to sight, and leaves the residue of its course a serious subject of hypothesis. The Kong mountains, and the Niger, maintain a very nearly similar course, leaving a vaguely known interval of from 3 to 400 mi. The known towns on the Niger, are Sego, Silla, Tombuctoo, Houssa, Kachna, and Gana. Between lon. 20° and $37^{\circ} E.$ of London, two rivers are laid down, which flow directly towards each other; the Bahr-Kuku from the Tibboo of Bilma, and the Bahr-Mislad from the Gibel Komni, or Mountains of the Moon. Both these rivers are discharged into Lake Vitre, of which recipient a third river is discharged, which finally joins the Niger, in the lower Wangara. The Kuku, flowing from the N., the Mislad from the S., and their continuation Bahr Lake from the SW., meets the Niger from the W. Wangara, is a complete assemblage of winding and crooked streams, presenting the general appearance of an estuary.

Thus far the geography of the Niger is certain; the relative positions are no doubt distorted, but the leading objects are known to have a real existence. It is impossible to pay due attention to this part of the map of Africa, without perceiving the general source of controversy on the course and termination of the Niger. Every author, who has written on this stream, has given its course, from what he conceived the best source of information. The existence of a great central African river, flowing to the E. was known to Herodotus, and communicated to Europe by some Nassomians from the Mediterranean coast. All the Greek and Roman authors, from Herodotus to Ptolemy, gave the Niger its real course.

Edrisi, an Arabian author, upwards of 15 centuries after Herodotus, first introduced doubt and confusion into this part of geography, by representing the Niger flowing westerly. Edrisi was followed by other Arabian authors. Though leading to a false general conclusion, the data used by Edrisi and his followers, was correct. They delineated the Niger and Nile, as flowing from the same chain; the latter to the NE., and the former to the NW. The Niger of Edrisi, and the Arabian authors generally, was most probably, the Miselad; and it is also extremely probable, that the very existence of the great western stream now known as the Niger, was not suspected by these writers. The Miselad, and Bahr-Abiadh, or real Nile, are now distinctly known to flow from the same mountains, and exactly as laid down by Edrisi. As soon as the real Niger was rediscovered, and found flowing eastward, an interminable controversy ensued, and yet Europe itself presents a very similar position to Wangara, in the collected waters of the Danube above Orsova. The Teise flowing from the E., the Save and Drave from the W., and the Danube from the N., and all forming the marshy plains of Temesvaer. Who would suspect the ultimate termination of the Danube, who only knew, the confluent streams above the mountain pass of Orsova?

The United States presents another instance similar to Wangara. The lower Tennessee flowing E. meets the Ohio from the NE., and both are quickly joined by the accumulated waters of Mississippi and Missouri from the N. W., and SW. If the courses of Ohio, Cumberland, Tennessee, Wabash, Mississippi, Missouri, and Osage were known, whilst their sources and continuation remained undiscovered, a great inland sea would be supposed to occupy lower Kentucky, lower Tennessee, and lower Missouri.

In respect to the Niger, whilst the courses of the main stream, the Bahr-Kuku, and Miselad have been developed, their continuation remains to be explored. Major Rennel, and after his example, many others of less talent, adopted the idea of an interior Caspian, or an egress by the Egyptian Nile. This school of Geographers found an impassable barrier in a supposed unity of the Kong and Gibel Komni Mountains. Major Rennel himself, convinced with much ingenuity, the hypothesis of any communication between the Niger and Nile, but adopted that hypothesis already noticed, of

an interior detached recipient. Major Rennel adopted another hypothesis, now found also incorrect; he supposed the Sahara, lower than the valley of the Niger. The southern course of the rivers, ought to have, at once precluded the existence of such an error.

Another source of controversy arises, from the different orthography of the same name. Is it not almost certain, that Wassannah, Kassina, Gana, Ginee, Guinee, are not different modifications of the same word; or, that these names are derived from a common root? Itineraries yield in almost all instances, very erroneous results, as respects distance and relative position.

Combining, therefore, all accounts of the Niger, we are fully justified in considering Wangara, or Gungara, as an alluvial region, formed by an assemblage of rivers, from which the accumulated mass of waters is discharged by a mountain pass, and that the Atlantic Ocean is the final recipient.

Since the preceding was written, I have had the advantage to read Malte Brun. This great Geographer adopts the opinion, that the Niger debouches into the Atlantic Ocean, but assumes from Reichardt the Bight of Benin, and not the Zaïre, as the point of final discharge. In Book LX., this author admits the possibility of a communication between the Nile and Niger, but similar to that of S. America, between the Amazon and Orinoco, by the Cassiquari and Negro rivers. In Book LXVII., Malte Brun recapitulates, with great perspicuity, the arguments by which M. Reichardt, supposed the Bight of Benin to be the recipient of the Niger, and though the former does not actually submit to the opinion of the latter author, it is obvious that his mind felt the force by which the conclusion was supported.

If the Niger is actually discharged by the Bight of Benin, it must have an entire course equal to 45° of a great circle, or upwards of 3000 ms., and will be of course, one of the greatest rivers of the earth; but if, as many suppose, the Zaïre of Congo, is identical with the Niger, then will that stream have a course of near 4000 ms., and will be the longest, if not the largest existing river. Every concurrent testimony, indeed, sustains the conclusion, that the immense open gulf of western and tropical Africa, is the recipient of one or two very great and many minor rivers of, however, still considerable magnitude. See *Nile* and *Zaïre*.

Nile, great river of Africa. The very name of this interesting stream, recalls our ideas to the most primitive times; we involuntarily recur to the dawn of history and geography, not more fabulous or mysterious in their origin, than this emblem of time, the Egyptian Nile. Modern science has, however, in part, laid open the long hidden sources of this mighty stream, and traced its springs to the central mountains

of Africa. A much abused man, James Bruce, with great industry, gallantry, and some share of talent, penetrated to the source of the middle branch of the Nile; but though entitled to more credit than he received, Bruce was ignorant of the very existence of the Bahr el Jebel, or White river, the real Nile. The White river, or great southwestern source of the Nile, rises in the Mountains of the Moon; at N. lat. 25° , N. lat. 7° . Flowing first nearly E., and gradually turning to the NE. and N., and after a comparative course of 900 ms. receives from the SE. the Abawi, or river of Amhara. Until recently, the Abawi, was by Europeans, considered as the principal source of the Nile. It rises in Abyssinia, and after a comparative course of about 700 ms. to the NW., joins the White river at N. lat. 16° . The Abawi is half a mile wide at its mouth, but in regard of volume, much inferior to the White river. After the junction of the White and Abawi rivers, the Nile flows NE. about 200 ms., where it receives from the SE., its last great affluent, the Tacazzé, or Tigre. The Tacazzé, though inferior in volume, equals the Abawi in length of course. The former rises at N. lat. 12° , E. lon. 42° , and within less than 100 ms. from the straits of Babel el Mandel, flowing thence in a NW. direction 700 ms. through Abyssinia, and Sennaar, falls into the Nile, at N. lat. 18° .

Below the mouth of the Tacazzé, the Nile, with many partial bends, flows in nearly a northern direction, and by comparative courses over Dongola, Nubia, and Egypt, 1200 ms. is lost in the Mediterranean by two mouths, that of Rosetta, and that of Damietta.

The distance across the higher sources of the Nile, from the SW. sources of White River to the head of Tacazzé, is about 1200 ms.; and from the junction of the Nile and Tacazzé, to the mountains of the Moon, 700 ms. The whole of the higher basin spreading in form of an immense triangle, of 1200 ms. base, and 700 perpendicular, and with an area of 420,000 sqms.

Below the mouth of the Tacazzé, commences the lower basin, which extends from N. lat. 18° to 32° , over 14° , or following the winding of the stream, 1200 ms.; but the lower basin cannot be estimated above 10 ms. mean width, of course, comprises only 12,000 sqms. Combining the two basins, this great river drains 432,000 sqms.

In one circumstance the Nile is alone; a course of 1200 ms. without a confluent, is a phenomenon altogether unparalleled in the general history of rivers.

The most important, however, of the features of this fine stream, is the difference of level between the Delta and higher basin. The plains of Egypt are depressed at least 10,000 feet below the table land of Abyssinia. Thus, though the Nile flows from S. to N., the climate and vegetable productions of its basin, suffer a change of temperature reverse to the lat. This is so far the case, that even Upper Egypt, at lat. 25° , is more exposed to heat, than the mountain valleys of Abyssinia, in N. lat. 12° .

Every appearance of the soil near the Nile, justifies the opinion, that this great river has undergone a deterioration, and is now carrying sand; and that nature has conspired to

share to produce the modern desolation of Egypt. That war and superstition have laid their most afflictive rod over this ancient seat of civilization, cannot be denied; but even war and superstition could not change a fruitful soil to a barren sand.

The basin of the Nile is limited by the Mediterranean N.; S. by lofty and unexplored mountains; SE. by the deserts of Suez; E. by a chain of mountains reaching from N. lat. 30° , to the straits of Habelmandel; and on the W. by mountains or deserts. The whole basin standing detached, forming a peculiar section of the earth.

The inundations of the Nile have been observed with interest from remote antiquity; but the cause of the annual swell must have been utterly inscrutable to the ancient Egyptians. It is now, however, known to arise from the tropical rains and snows of Abyssinia. From its peculiar course and fall of its bed, a very small part of the Abyssinian moisture can reach Egypt. The flood, which must commence its motion about the vernal equinox, does not reach Egypt before the summer solstice, and increases its height until the autumnal equinox. By the White River, the Nile is 2100 ms., and by either the Abaya or Tacazzé 1900 ms. in length. This velocity amounts to only about $15\frac{1}{2}$ ms. per diem from lat. 10° to 30° . The greatest breadth of the Nile is only about 2000 feet, a little above the third of a mile. Like all great rivers, the motion of its current has been over-rated at 3 ms. per hour, as we may perceive by the mean motion of its annual flood. The colour of its water, even when lowest, in April, May, and June, is a dirty red.

The elevation of flood necessary to inundate Egypt, has been increasing. According to Herodotus in Euterpe, 1700 years before the Christian era, 8 cubits covered the Delta. When Herodotus was himself in Egypt, it demanded 15 or 16 cubits; and it now requires 22 to produce a diminished effect. Is not the true cause of this revolution found in a gradual diminution of the level of the Mediterranean?

The inundation diminishes as the river approaches its recipient; the inundation is one-sixth part more at Assouan or Syené, than at Cairo, 360 ms. below; and when it rises 27 feet at Cairo, it rises only about 4 at Rosetta and Damietta. This river cannot be entered from the sea, at ordinary flood with more than 7 or 8 feet water by either mouth; but within the bars, has generally water for vessels of 40 tons to Assouan, and at the lowest, is navigable for small boats. Though in great part inhabited by barbarians, the basin of the Nile must be regarded with deep interest amongst the great divisions of the habitable earth.

Whether a part of the water of the Nile could or could not be diverted into the Red sea, has been a subject of hypothesis for ages. It appears to be well authenticated as an historical fact, that a canal did formerly exist along this route, but on what principles constructed, is uncertain. From the superior elevation of the Nile, there cannot be a rational doubt, but that under the influence of science, and commercial enterprise, an artificial branch might be led from Upper Egypt round the

mountains to the SE. of Cairo. Such a project was conceived by the Portuguese, when in possession of the East Indian commerce, but neither by them or others ever actually attempted. See *Red Sea*, *Abyssinia*, &c.

Nile, SW. tp. Sciota cy. Ohio. Pop. 1820, 524.

Nimeguen, city of Holland, capital of Gelderland, with a citadel, an ancient palace, and several forts. It is also the capital of a country of its name, or of the island of Betuwe, the ancient Batavia. It is seated on the Waal, 35 ms. SE. of Utrecht, and 70 NE. of Antwerp. Ning-Koue-fou, city of China, in the province of Kiang-nan, noted for its manufacture of paper, made of a species of reed; and containing in its district six cities of the third class.

Ning-fo-fou, called by the Europeans *Tiampa*, an excellent seaport of China, on the E. coast, opposite to Japan, in the province of Tchekiang. This city has four others under its jurisdiction, besides a great number of fortresses. It is 850 ms. SE. of Peking. Lon. $120^{\circ} 18'$ E. lat. $59^{\circ} 57'$ N.

Ningouta, city of Mautshuria, in the department of Kirin. It is surrounded by a wooden wall, composed of plain stakes driven into the earth. Without this palisado, there is another of the same kind, a league in circumference, which has four gates, corresponding to the four cardinal points.

Ninove, town of the kingdom of the Netherlands, on the river Dender, with an abbey, 13 ms. W. of Brussels. Lon. $4^{\circ} 5'$ E. lat. $50^{\circ} 52'$ N.

Nio, island of the Archipelago, to the S. of Naxia, anciently called Jos. It is 35 ms. in circumference, and fertile in corn, but has very little wood or oil. It has several commodious harbours, and is remarkable for nothing but Homer's tomb, who is said to be buried here. Lon. $25^{\circ} 35'$ W. lat. $36^{\circ} 43'$ N.

Niort, town of France, in the department of the two Sevrés, and late province of Poitou. Its dry sweetmeats are much esteemed, and it is noted for manufactures of coarse woollen goods. It is 28 ms. NE. of Rochelle. Lon. $0^{\circ} 33'$ W. lat. $46^{\circ} 20'$ N.

Nipegon Lake, U. C., lies to the northward of lake Superior, about half way between it and Albany river, James' bay.

Nippon, largest island of Japan, 600 ms. long, and 150 broad, containing 55 provinces. It was discovered in 1542, by the Portuguese, who were cast on shore by a tempest. The chief town is Jedo. It is 134 ms. E. of China.

Nepissing Lake, lies NE. of lake Huron, and is connected with it by the river Francois.

Nishuck Novogorod, town of Russia, in a government of the same name. See *Novogorod Niznei*.

Nisibin, or *Nisbin*, ancient *Nisibis*, very ancient and celebrated town of Diarbeck, now only the shadow of what it was, and seated in a vast plain, 70 ms. SW. of Diarbekar. Lon. 38° 26' E. lat. 36° 10' N.

Nisita, small island on the coast of Naples, very fertile, and would be more productive but for the great number of rabbits. It has a harbour, called Porto Pavone.

Nismes, flourishing city of France, in the department of Gard, and late province of Languedoc. Here are several monuments of antiquity, of which the amphitheatre built by the Romans, is the principal. The Maison Quarée, or the square house, is a piece of architecture of the Corinthian order, and one of the finest in the world. The temple of Diana is, in part, gone to ruin. Nismes was taken by the English in 1417. The population of Nismes is computed at 50,000. It is seated in a plain abounding in wine and oil, 12 ms. NW. of Arles, and 75 NE. of Narbonne. Lon. 4° 26' E. lat. 43° 51' N.

Niskayuna, village and tp. Schenectady cy. N. Y. The village is owned and inhabited principally by the sect called Shakers. It is 12 ms. NW. from Albany. Pop. 1820, 516.

Nissa, or *Nissava*, town of Turkey in Europe, in Servia, seated on the Moravia, 20 ms. E. of Precepp and 120 SE. of Belgrade. Lon. 22° 32' E. lat. 43° 32' N.

Nith, river of Sthd. in Dumfriesshire, which issues from a lake, in the mountains to the NW., and passing the towns of Sanquhar, Morton, and Drumlanrig, joins the Cairn, a little above Dumfries, and their united streams form a fine estuary in Solway Frith.

Nishdale, division of Dumfriesshire, Sthd., lying to the W. of Annandale. It is a large and mountainous country, and derives its name from the river Nith. It was formerly wooded with noble forests, which are now almost destroyed. It yields lead, and the mountains are covered with sheep and black cattle.

Nitria, famous desert of Egypt, 37 ms. in length, on the coast of the Mediterranean Sea. It had formerly a great number of monasteries, which are now reduced to four; and it takes its name from a salt lake, out of which is got the natrum of the ancients.

Nivelle, town of the kingdom of the Netherlands, in Brabant, remarkable for its abbey of noble canoneses, whose abbess is styled princess of Nivelle. The place enjoys great privileges, and has a manufacture of cambricks. It is 15 ms. SE. of Brussels. Lon. 4° 36' E. lat. 50° 35' N.

Nivernois, late province of France, between Burgundy, Bourbonnois, and Berry. It now forms the department of Nievre.

Nizabour, town of Persia, in Korasan, 80 ms. SE. of Mesched. Lon. 61° 32' E. lat. 36° 40' N.

Nizalpa, or *Nijapa*, considerable town of Mexico, in Oajaca. The country near it produces a great deal of indigo, cochineal, and sugar. It is 30 ms. SE. of Antequiera. Lon. W. C. 18° 45' W. lat. 16° 42' N.

Nixon's, psto. Maury cy. Tenn., 50 ms. SE. from Murfreesboro.

Nixonton, pstv. Pasquotank cy. N. C., on the E. side of Little river, 35 ms. NE. of Edonton, and 13 SW. of Jonesburg on Pasquotank river.

Nizza-della-Paglia, town of Italy, in Montferrat, seated on the Belbo, 15 ms. SW. of Alessandria. Lon. 8° 36' E. lat. 45° 15' N.

Noanagur, town of Hindoostan Proper, situated on the S. coast of the Gulf of Cutch. It is capital of a district inhabited by a piratical tribe, called Sangarians. It is 300 ms. NW. of Bombay.

Noble, NE. tp. of Morgan cy. Ohio. Pop. 1820, 368.

Nobleborough, pst. Lincoln cy. Muine. Pop. 1810, 1206, in 1820, 1513. Situated on the E. side of Kennebec river.

Noblesville, pstv. Hamilton cy. Ind., 25 ms. N. from Indianapolis.

Nockumaxon, tp. Bucks cy. Penn., on the SW. side of the river Delaware, between Tinicum and Durham, and opposite Alexandria in N. J. Pop. 1810, 1207, in 1820, 1650.

Nocera, ancient town of Italy, in the dutchy of Spoleto, at the foot of the Appennines, 18 ms. NE. of Spoleto. Lon. 12° 49' E. lat. 43° 1' N.

Non, Cape, promontory of Africa, opposite the Canary Islands. It was long considered by the Portuguese, in their attempts to explore Africa, as an impassable boundary, denoted by its name. But they doubled it at last, in 1412. Lon. $10^{\circ} 30'$ W. lat. $28^{\circ} 30'$ N.

Nona, small but strong town of Hungarian Dalmatia. It is seated near the sea, 7 ms. N. by W. of Zara. Lon. $16^{\circ} 10'$ E. lat. $44^{\circ} 35'$ N.

Nontrois, town of France, in the department of Dordogne, and late province of Perigord, 21 ms. N. of Perigneux, and 36 SSW. of Limoges. Lon. $0^{\circ} 33'$ E. lat. $45^{\circ} 32'$ N.

Noopour, town of Hindoostan Proper, in the province of Guzerat, 55 ms. E. of Surat, and 142 W. of Burhampour. Lon. $73^{\circ} 50'$ E. lat. $21^{\circ} 11'$ N.

Norrlen, considerable town of Westphalia, 12 ms. N. of Embden. Lon. $7^{\circ} 5'$ E. lat. $55^{\circ} 38'$ N.

Nootka. See *King George's Sound*.

Noquet's, bay of Michigan territory, on its SW. coast. It sets inland 4 ms.

Norberg, town of Sweden, in Westmanland, 34 ms. N. of Stroemsholm. In its vicinity are the best iron mines in the province. Lon. $16^{\circ} 12'$ E. lat. $60^{\circ} 2'$ N.

Norcia, town of Italy, in the duchy of Spoleto, seated among the mountains, on the river Fredara, 20 ms. SE. of Spoleto.

Nord, department of France, so named from being the most northern in situation. It includes the late French provinces of Hainault, Flanders, and Chambresia, Douay is the capital.

Nordburg, town of Denmark, at the N. extremity of the isle of Alsens, with a castle, 9 ms. NNW. of Sunderburg.

Norden, seaport of Westphalia, in East Friesland, and a considerable place of trade, with a good harbour. It is 4 ms. from the German Ocean, and 14 N. of Embden. Lon. $7^{\circ} 13'$ E. lat. $53^{\circ} 32'$ N.

Nordgau. See *Bavaria, Palatinate of*.

Nordhausen, town of Upper Saxony, in Thuringia, with 7 Lutheran churches, and a well built orphan-house. It has a considerable trade in corn, brandy, and rape, and linseed oil, with manufactures of marble and alabaster. It is seated on the Zorge, 35 ms. NNE. of Erfurt. Lon. $10^{\circ} 50'$ E. lat. $51^{\circ} 30'$ N.

Nordheim, town of Lower Saxony, in the duchy of Brunswick, sits on the Rhume, at its conflux with the Leina 10 ms. N. of Göttingen.

Nordkoping, seaport of Sweden, capital of E.

Gothland. It is 10 ms. in circumference, but the houses are scattered, and the inhabitants do not exceed 1200. The river Motala flows through the town, forms a series of cataracts, and is divided into 4 principal streams, which encircle several rocky islands, covered with buildings; but at the extremity of the town it is navigable for large vessels. Here are manufactures of woollen cloth, paper, and fire arms; some sugar-houses, and a brass foundry; corn is exported hence in great quantities; and a salmon fishery gives employment and riches to many of the inhabitants. It is 110 ms. SW. of Stockholm. Lon. $15^{\circ} 50'$ E. lat. $58^{\circ} 35'$ N.

Nordland, one of the five grand divisions of Sweden, bounded on the N. by Lapland, E. by the Gulf of Bothnia, S. by Sweden Proper, and W. by the same and Norway. It contains six provinces.

Nördlingen, town of Suabia, fortified in the ancient manner. Here the league of the five western circles of the empire was concluded, in 1702. In 1796, it was taken by the French. It is a commercial place, seated on the Eger, 36 ms. NNW. of Augsburg. Lon. $10^{\circ} 34'$ E. lat. $48^{\circ} 50'$ N.

Nordmaling, town of Sweden, in Angermania, near a bay of the Gulf of Bothnia, 24 ms. SW. of Uma, and 70 NE. of Hermosand.

Nordstrand, island of Denmark, on the W. coast of S. Jutland, 12 ms. long and 5 broad. It has a town called Hams, 28 ms. W. of Sleswick. Lon. $9^{\circ} 0'$ E. lat. $54^{\circ} 40'$ N.

Norfolk, cty. of Eng., 77 ms. long and 45 broad; bounded on the N. and E. by the German Ocean, SE. and S. by Suffolk, and W. by Cambridgeshire and Lincolnshire. It contains 1,964,407 acres; is divided into 32 hundreds, and 660 parishes; has one city and 32 market towns; and sends 12 members to parliament. Pop. 1801, 273,371; in 1811, 291,999; and in 1821, 344,368. The products vary according to the soil and situation. The lighter arable lands produce barley in great plenty; wheat is cultivated in the strongest soils; and turnips are grown here in great quantities; much buck-wheat is also grown in the light soils, and used for feeding swine and poultry. The fenny parts yield great quantities of butter; which is sent to London under the name of Cambridge butter. The sheep are a hardy small breed, much valued for their mutton. Turkeys are reared here to a larger size than elsewhere; rabbits are extremely numerous on the sandy heaths. and there is abundance of game, especially of pheasants. The manufactures of Norfolk are worsted, woollen, and silks. Its principal rivers are the Great Ouse, Nen, Little Ouse, Waveney, Yare, and Bure. Norwich is the capital.

Norfolk Island, island in the Pacific Ocean, lying E. of New South Wales, and settled by a colony of convicts, subordinate to that government. It was discovered in 1774, by captain Cook, who found it uninhabited, except by birds. It is very hilly, but some of the valleys are tolerably large. Mount Pitt, the only remarkable hill 12,000 feet high. The whole island is covered by a thick forest, but has not much underwood; and the principal timber tree is the pine, which is very useful in building, and seems to be durable. The soil, when

cleared, may be rendered very productive. The spring is perceptible in August; but the trees are in a constant succession of flowering and fruiting the year round. In summer the heat is excessive; and from February to August may be called the rainy season; and the winter, from April to July, is very pleasant. The island is supplied with many streams of good water, which abound with very fine eels. The cliffs round the coast are 240 feet high, quite perpendicular; and anchorage is safe all round the island, on taking the lee side; but there is no harbour. The settlement was made by a detachment from Port Jackson, 1788, in Sydney bay, on the S. side of the island. Lon. 168° 12' E. lat. 29° 4' S.

Norfolk County, U. C., is bounded on the N. and E. by the city of Lincoln and the river Thames; on the S. by Lake Erie, until it meets the Orwell river; thence by a line running N. 16° W. until it intersects the river Thames, and thence up the said river, until it meets the NW. boundary of the city of York. It sends, in conjunction with the fourth riding of the city of Lincoln, one representative to the provincial parliament.

Norfolk, city, Mass., bounded by R. I. SW., Worcester in Mass. W., Middlesex NW. and N., and Suffolk city, Boston harbour, and Hull bay NE. Length 30 ms., mean width 13; area about 400 sqms. Surface uneven rather than hilly. Soil productive in grain, fruits, and pasture. Chief town, Dedham. Pop. 1820, 36,452. Ctl. lat. 42° 12' N. lon. W. C. 5° 50' E.

Norfolk, pstv. Litchfield city, Conn., 35 ms. NW. by W. from Hartford, and 20 ms. N. from Litchfield.

Norfolk, pstv. St. Lawrence city, N. Y., by pstrel. 251 ms. NNW. from Albany.

Norfolk, city, Virg., bounded by Hampton Roads and Lynhaven bay N., by Nansemond city, Virg. W., by Pasquotank and Currituck cities, N. W. S., and Princess Anne city, Virg. E., Length 30 ms., mean width 20; area 600 sqms. Surface level, and in part marshy. Soil generally thin, sandy, or wet and sterile. Pop. 1820, 15,465. Ctl. lat. 36° 45' N. lon. W. C. 0° 55' E.

Norfolk, pst. borough and port of entry, Norfolk city, Virg., on the right bank of Elizabeth river, immediately below the junction of its two branches, and 8 ms. above Hampton roads. Lon. from the Royal Observatory at Greenwich, 76° 23' W. and from W. C. 0° 57' E.

It is the most commercial town of Virg., and in 1815, the tonnage exceeded 34,700, and stood next to Charleston of any of the U. S., S. from Baltimore. It is defended by several forts, the most important of which is on Craney island, near the mouth of Elizabeth river, about 5 ms. below the town. The U. S. Commissioners, who were appointed in 1818, to survey the lower part of the Chesapeake bay, reported, that Hampton Roads, though extensive, were capable of adequate defence, so as to prevent the entrance of an enemy's fleet.

Norfolk is connected with the commerce of N. C. by the dismal swamp canal. This inland communication opens from Elizabeth river, 9 ms. above Norfolk, and extends through the Dismal Swamp, into Albemarle sound. By means

of this canal the produce of an extensive section of N. C. finds a market at Norfolk.

This town contains a theatre, two state banks, a branch of the bank of the U. S., a marine hospital, orphan asylum, an academy, Lancasterian school, Athenæum, and six or seven places of public worship. The site is level; and so low in some places as to be marshy; but the streets are commodious, being well paved.

Norland, one of the five general divisions of Sweden, comprehending the provinces Gestrikeland, Helsingland, Medelpadia, Heimtland, Herjedalia, Ongermania, and West Botlinia.

Norman Mts, U. C., in the tp. of Newark, empties its waters into Lake Ontario, about the centre of the tp. W. of Niagara Fort, called the Four Mile Pond.

Normandy, late province of France, bounded on the W. by the Atlantic, N. by the English channel, E. by Picardy and the Isle of France, and S. by Perche, Maine, and Bretagne. The Normans, a people of Denmark and Norway, having entered France, under Rollo, Charles the Simple ceded this country to them in 912, which from that time, was called Normandy. Rollo was the first duke, and held it as fief of the crown of France, and several of his successors after him, till William, the seventh duke, conquered England, in 1066, from which time it became a province of Eng., till it was lost in the reign of king John, and re-united to the crown of France. The English, however, still keep possession of the islands on the coast, of which Jersey and Guernsey are the principal. It is one of the most fertile provinces in France, and abounds in all things except wine, but that defect is supplied by cider and perry. It contains iron, copper, and a great number of rivers and harbours. This province now forms the departments of Calvados, Eure, Manche, Orne, and Lower Seine.

Norridgewock, pst. Somerset city, Maine, ly.

ing on the S. side of Kennebec river, 35 ms. NW. of Augusta. Pop. 18 0, 880, in 1820, 1454.

Norridgewick, village and seat of justice, Somerset co. Maine, in the forgoing tp., 35 ms. W. by N. from Hallowell. Lat $44^{\circ} 35'$ N. lon. W. $67^{\circ} 4'$ E.

Norristown, borough, pstv. and seat of justice, Montgomery co. Penn., situated on the NE. side of the Schuylkill river, 17 ms. above Philadelphia. It contains the co. buildings, a bank, and an academy. Pop. 18 0, 827.

Norristown, tp. Montgomery co. Penn., around the borough of Norristown. Pop. 1820, 1098.

Norsega, or *Nor Teige*, maritime town of Sweden, in the province of Upland, near which is a forge for making fire arms. It was much injured by the Russians in 1719, who ravaged the town. It is 30 ms. NE. of Stockholm. Lon. $19^{\circ} 32'$ E. lat. $59^{\circ} 44'$ N.

North, tp. Harri-on co. Ohio, in which is situated the village, or town, of New Rumley. Pop. 1820, 1118.

North, Adams, pstv. Berkshire co. Mass. 150 ms. a little N. of W. from Boston.

North Anema, pstv. Dutchess co. N. Y., 25 ms. E. from Rhinebeck.

North, or *Nord*, department of France, which comprehends the late French provinces of Hainault, Flanders, and the Cambresis.

North Cape, most northern promontory of Europe, on the coast of Norway. Lon. $25^{\circ} 57'$ E. lat. $71^{\circ} 20'$ N.

North Coast, department of France. See *Cotes du Nord*.

North Ferry, small town of Sfld. at the N. side of the Frith of Forth, at the Queen's ferry passage.

Northallerton, borough of Eng. in the N. riding of Yorkshire, on a small brook, which, a mile below, runs into the river Wisk. It is a well built trading place, 30 ms. NNW. of York, and 223 N. by W. of London. Lon. $1^{\circ} 20'$ W. lat. $54^{\circ} 25'$ N.

Northampton, borough of Eng. and the capital of Northamptonshire. It is seated on the Nen, which is navigable to Lynn. It has a spacious market-place, a good free-school, and a county infirmary and jail. The principal manufacture is boots and shoes, of which many are made for exportation. This town is 30 ms. SE. of Coventry, and 66 NW. of London. Lon. $1^{\circ} 11'$ W. lat. $52^{\circ} 11'$ N.

Northampton, co. of Eng., 60 ms. long, and 22 where broadest; bounded on the S. by Buckinghamshire and Oxfordshire, W. by the latter co. and Warwickshire, NW. by Leicestershire and Rutlandshire, N. by Lincolnshire, and E. by the cities of Cambridge, Huntingdon, and Bedford. It contains 617,400 acres; is divided into 10 hundreds, and 336 parishes; has one city and 11 market towns, and sends nine members to parliament. In the NE. part, near Peterborough, commences a fenney tract, extending to the Lincolnshire Wash. With this single exception, Northamptonshire is said to containless waste ground, and more seats of the nobility and gentry, than any other co. Its greatest defect is a scarcity of fuel, which is but scantily supplied by its woods, and though coal is brought by the river Nen, it is at a very dear rate. This co., however, possesses some

considerable remains of its old forests, particularly those of Rockingham on the NW., and of Salcey and Whittlebury on the S. Its products are, in general, the same with those of other farming coes; but it is peculiarly celebrated for grazing land. Horned cattle, and other animals, are fed to extraordinary size, and many horses of the large black breed are reared. Wood for the dyers is cultivated here; but the co. is not distinguished for manufactures. The principal rivers are the Nen and Welland; beside which, it is partly watered by the Ouse, Great Ousewell, and Avon. Pop. 18 0, 131,757, in 1811, 141,353, and in 1821, 163,433.

Northampton, town of York co. New Brunswick.

Northampton, tp. Rockingham co. N. H., on the Atlantic Ocean, 7 ms. SW. from Portsmouth. Pop. 18 0, 761.

Northampton, pst. and seat of justice, Hampshire co. Mass., on the right bank of Connecticut river, in a delightful country, 18 ms. above Springfield, and 42 above Hartford. The aspect of the adjacent country is not only pleasant, but highly romantic. The neighbouring mountains, particularly Mount Holyoke, affords some of the finest landscapes in New England. It contains the co. buildings, one bank, one insurance office, a weekly newspaper, and several manufactories. Pop. 1810, in the tp., 2631, in 1820, 2854.

Northampton, tp. Montgomery co. N. Y., about 60 ms. NW. of Albany. Pop. 1810, 1474, in 1820, 1,911.

Northampton, tp. Bucks co. Penn. It is situated on the SW. of Neshaminy creek, 8 ms. SE. from Doylestown. Pop. 1810, 1176, in 1820, 1411.

Northampton, tp. Burlington co. N. J., 7 ms. SE. from Burlington. Pop. 1810, 4171, in 1820, 4833, including Mount Holly.

Northampton, or *Allentown*, pst. and seat of justice, Lehigh co. Penn., on the point above the confluence, between Lehigh river, and Little Lehigh creek, 6 ms. SSW. from Bethlehem, 18 SW. from Easton, and 35 NNW. from Philadelphia. It is situated in a well cultivated and fertile settlement. The site is elevated and pleasant. It contains, beside the co. buildings, a bank, printing office, several dry good stores, and a number of merchant mills. The principal staple, flour. An elegant wooden bridge, rising on stone arches, has been erected over the Lehigh, on the road to Easton and Bethlehem. A substantial bridge, also, crosses Little Lehigh, on the Philadelphia road. The Lehigh is here turned at nearly right angles, by the South Mountain.

Northampton, co. Penn., bounded by the Delaware river, or Sussex co. N. J. E., Bucks co. SE., Lehigh and Schuylkill coes. SW., Luzerne co. NW., and Pike co. N. Length 37 ms., mean width 30; area 1060 sqns.

This is one of the most diversified coes, not alone of Pennsylvania, but of the U. States. It is traversed from NE. to SW. by the Kittatinny Mountains, or, as it is locally called by the country, Blue Ridge. This chain divides it into two very unequal sections. That SE. from the Kittatinny lies in the form of a triangle, the base along the mountains, and perpen-

dicular on Lehigh cty., and contains within a trifle of 400 sqms. It contains also the tps. of Lower Saucon, Williams, Bethlehem, Forks, borough of Easton, Hanover, Nazareth, Upper and Lower, Allen, Lehigh, Moore, Bushkill, Plainfield, and Upper and Lower Mount Bethel; with an aggregate population of 22,030. This part of Northampton cty., with the exception of the tps. of Lower Saucon and Williams, lies between the Kittatinny and South Mountain. The surface, though generally hilly, is generally arable. The very remarkable slate and lime-stone formation which extends so distinctively from the Delaware to the Susquehanna, in the Kittatinny valleys, peculiarly striking in the lower part of Northampton. The lime-stone tract starts the South Mountain, and the argillaceous slate, the Kittatinny, each extending from its respective base, about half way across the valley. Though both are highly productive in grain, fruits, and pasturage, the lime-stone soil is rather stronger than that of the slate, and the features of nature less bold on the former, than on the latter formation.

The tps. of Lower Saucon and Williams, are separated from the other parts of the cty. by Lehigh, and traversed by a ridge passing by Bethlehem, and interrupted by the Delaware, two miles below Easton. From many of the highest eminences of this range, the highly cultivated section we have been reviewing, spreads before the eye like a vast garden, terminated by the distant Kittatinny mountains.

That part of Northampton NW. from the Kittatinny Mountains, extends over 810 sqms., and is remarkably broken into mountain ridges. Of these, the Kittatinny is the only one which passes through the cty. in a direct line. Those in the NW. are scattered, disunited, and lie rather in groups, than extend to collateral ridges. All, however, have a general NE. and SW. arrangement, and leave intervening valleys of more or less width and fertility. As in other parts of Pennsylvania, the Northampton ridges receive local names in different places. The principal ones are, beside the South Mountain, or Lehigh hills, and Kittatinny, the Pokono, or Second Mountain, Broad Mountain, Mauchchunk Mountain, and some others. The soil in the valleys above Kittatinny, even where arable, is much inferior to that of the lower sections already noticed. The general character of the latter, is warm and productive. Above the Kittatinny, the soil is principally composed of gravel and clay, and still farther above the Pokono, partakes so much of the clay, as to become very cold and unproductive. The timber, hemlock and small pines. The rude character of this part of Northampton, is seen by reference to its comparative population. Though embracing above 800 sqms., the aggregate number of inhabitants, is only 9735, or within a trifling fraction of 10 to the sqm., whilst, as we have seen, the SE. section contains a condensed population of near 57 to the square mile.

The rivers of Northampton, are the Lehigh and Delaware. Creeks below Kittatinny, and advancing SW. from the Delaware Water Gap, are Crosby's, Richmond, Martin's, Muddy creek,

Bushkill, Monocacy, Calesoque, and Hockendocque; the three latter falling into the Lehigh, the residue into the Delaware.

Above the Kittatinny, the Delaware receives, immediately above the Water Gap, Broadhead's creek, partly from Pike, and partly from Northampton. The mountain section of this cty. is, however, more particularly drained by the confluent of the Lehigh; these are, from the left, Tobyhanna, Dreck, Muddy, Big creek, and Aquanshicola; from the right, Quacake, Nesquehoning, Mahoning, and Lizard creeks.

Delaware washes the eastern border of Northampton, following its windings about 25, but in a direct line 20 ms.; its course generally nearly N. and S. Though obstructed with some shoals below that place, the Delaware is navigable for large boats to Easton, and for smaller vessels; and with more difficulty, to above that borough beyond the limits of Pennsylvania.

The Lehigh is emphatically the river of Northampton, having most of the sources, and the greater part of its course, in that cty. This stream demands particular notice, as it has now become the channel of transportation for the immense masses of anthracite coal found in the Mauchchunk Mountain. The Lehigh, in fact, rises in Wayne, Pike, and Luzerne cties.; but its various confluent unite near Stoddartsville, on the NW. border of Northampton, and again augmented by many mountain creeks, flows by comparative courses 25 ms., to the mouth of Wright's mill creek. It thence turns to nearly S. and by a very serpentine course, but in a direct line of about 20 ms., passes Mauchchunk, and reaches Lehighton. Here it inflects to SE., and continues in that direction 25 ms. to Allentown, or town of Northampton. At Allentown, the Lehigh is again turned to the South Mountain at nearly right angles, and assuming a NE. course down the foot of the mountain, flows past Bethlehem, and reaches the Delaware at Easton, 55 ms. below Allentown. The entire comparative course of this stream, is 85 ms. From near its extreme source to Trout creek, it separates Pike and Luzerne cties. From Trout creek to Rock Eddy Falls, it separates Northumberland from Luzerne. Below Rock Eddy Falls to its passage, through the Blue or Kittatinny Mountain, its course is within Northampton cty. Between its passage through the mountain, and the mouth of the Hockendocque creek, its course forms the limit between Northampton and Lehigh cties. Below Hockendocque to Bethlehem, it flows through Lehigh, and below Bethlehem to Easton, through Northampton.

The Lehigh is truly a mountain torrent, and meanders through a series of natural scenes, not excelled, or equalled in the U. States. The following table, will exhibit its descent from Stoddartsville to Easton.

| | Fall in Feet. |
|---|---------------|
| Stoddartsville to the mouth of the Nesquehoning creek, about two ms. above Lausanne, and three above the village of Mauchchunk, | 845 |
| From Nesquehoning, to the Lehigh Water Gap, | 260 |
| From the Gap to Easton, | 303 |

From Easton, to tide water in Delaware river at Trenton, according to the last information, that stream falls about 100 feet. The Lehigh at Stoddartsville is, therefore, elevated 1310 feet, and at Mauch Chunk, within a trifle of 460 feet, above the level of the Atlantic Ocean. According to the manuscript notes of Isaac A. Chapman, Esq., the average height of Kittatinny Mountains, in Northampton, is 1186 feet above the Lehigh and Delaware rivers, at its base, consequently, 1491 feet above the Atlantic level. Mr. Chapman estimates the height of Pokono Mountain above its base at 850 feet; which, when compared with the foregoing elements, yield 1305 feet, for the elevation of that ridge, above the ocean.

Mauch Chunk Mountain, at the coal mine, is 1006 feet above the Lehigh, at Mauch Chunk village. We have seen that the village stands 460 feet above the Atlantic level; therefore, the justly celebrated coal mine, is 1466 feet above the surface of the Atlantic. I may, however, remark, that some of the peaks of Mauch Chunk Mountain, between the mine and the village, must rise several hundred feet higher than the coal mine, and higher than the general elevation of the Kittatinny, as I have myself stood on two eminences of the Mauch Chunk, and saw distinctly, the South Mountain over the intervening Kittatinny.

We may safely assume, the general elevation of the cultivated part of Northampton, in the Kittatinny valley, from 250 to 350 feet; and for that section above the Kittatinny, a general elevation of from 500 to 600 feet. Mr. Chapman observes, that there is a difference in the seasons and vegetation of two weeks, between the respective sections. The difference of elevation and exposure, exhibits the cause of this rapid change of temperature.

We will close this rather lengthy view of Northampton, with a notice of its principal roads and towns.

A main turnpike road leaves Philadelphia, passes through Philadelphia, Montgomery, Bucks, and part of Lehigh cities, enters Northampton in the tp. of Lower Saucon, and crosses the Lehigh at Bethlehem. Here it branches into two routes. One turns NW. up the Lehigh, and passing Kreiderville, through the Lehigh Water Gap, by Lehigh, Mauch Chunk, and Lausanne, continues on to the banks of the Susquehanna, at Nescopec. From Bethlehem, the other, or northern branch, proceeds towards Easton, but breaks into numerous country roads, one of which leads on to Nazareth, and to the Delaware Wind Gap. The lower Philadelphia road reaches Easton, between the foregoing, and Delaware river. Above Easton, a main road extends a little W. of N., to the Wind Gap. Here it branches into two routes; one continuing NW. to Wilkesbarre, and the other N., into Pike co. From Easton, another road leads up the Delaware to the Water Gap. Beside these, numerous cross roads checker the lower part of Northampton co., and render communication easy and convenient.

Northampton contains the borough of Easton and the villages of Bethlehem, Hellertown, Stroudsburg, Burlington, Mauch Chunk, and Lehigh. Staples of Northampton co.,

grain, flour, cider, whiskey, salted provision, live stock, lumber, and mineral coal.

Northumberland, cy. of Eng., which received its name from being situated N. of the Humber. In the Saxon Heptarchy it was a part of the Kingdom of the Northumbrians, which contained also the counties of York, Lancaster, Durham, Cumberland, and Westmoreland. It forms the N. extremity of Eng., and is bounded on the E. by the German Ocean, and on the S. by the bishopric of Durham, on the SW. and W. by Cumberland, and on the NW. and N. by Scotland, from which it is separated by the Tweed. It extends 70 ms. from N. to S., and 50 from E. to W. It lies in the diocese of Durham; contains 12 market-towns, and 460 parishes; and sends 8 members to parliament. Pop. 1801, 157,101; in 1811, 172,161; and in 1821, 198,965. The air of this cy. is not so cold as might be imagined from the lat. in which it lies; for its situation between two seas, in the narrowest part of Eng., gives it the advantage of having the cold moderated by the vapours of each; and, for this reason, the snow seldom lies long in this cy., except on the tops of high hills. The air is very healthful, and the people, who generally live to a great age, are seldom afflicted with sickness. The soil is various, the eastern part, which is fruitful, having very good wheat, and most sorts of corn, and has rich meadows on the banks of the rivers; but the western part is generally barren, it being mostly heathy and mountainous. The SE. part abounds with pit coal, of which 638,858 chaldrons were computed to be annually shipped from thence.

to London. There are also large quantities of lead and timber. The principal rivers are the Tyne, the Tweed, and the Cocket. Alnwick is the county town, but the largest is Newcastle.

Northumberland, cty. of Penn., bounded by Schuylkill E., Dauphin S., Susquehanna river, or Union W., Lycoming N., and Columbia NE. Length 35 n.s., mean width 13; area 455 sqms. This is one of the mountain cties of Penn., and very much diversified in surface. Having so much river, it possesses, notwithstanding its general mountainous aspect, a large proportion of good, and considerable first rate soil. Washed by the main Susquehanna, 20 ms. below, and by the W. branch, 20 ms. above Sunbury and Northumberland, produces a range of river soil of 40 ms. in length. To this may be added, 10 ms. of the E. branch, between Sunbury and Danville; the whole, including both banks of the latter section, yielding a river line of 60 ms. This alluvial range contains the mass of the population. Contrary to the ordinary course of the Appalachian ridges, the mountains of Northumberland extend nearly E. and W. The principal ridges are, advancing from S. to N., Line Mountain, Little Mahanoy, Mahanoy, and Shamokin, below the junction of the two great branches of Susquehanna; above their confluence, Montours Mountain, and the Limestone Ridge.

Beside the two fine rivers we have noticed, Northumberland is drained by some large creeks, the principal of which are, Mahantango, Mahanoy, and Shamokin, entering Susquehanna below Sunbury; and Chillisquaque, Limestone, and Warrior creeks, above Northumberland. Some of these creeks meander through narrow valleys with much good soil.

The staple productions of Northumberland are grain, flour, salted provisions, lumber, whiskey, and many other articles.

Its principal towns are Sunbury, Northumberland, Milton, and Watsonburg. Pop. 1820, 15,424. For cty. lat. see *Northumberland*.

Northwich, town of Eng. in Cheshire. It is seated on the Weaver, near its conflux with the Dane, and is noted for its salt-works. The strata of salt lie about 40 yards deep, and some of them are hollowed into the form of a temple. Vast pits of solid rock salt have been dug here to a great depth, from which immense quantities are raised; and much of it, in its crude state, goes to Liverpool, by the river Weaver, to be exported. Northwich is 20 ms. NE. of Chester, and 17 NW. of London. Lon. $2^{\circ} 36' W.$ lat. $53^{\circ} 16' N.$

Norway, kingdom in the N. of Europe, the most westerly part of the ancient Scandinavia. It is bounded on the W. and N. by the Northern Ocean, E. by Swedish Lapland, and Sweden, and S. by the Categate; extending from the Naze, in lat. $57^{\circ} 30'$ to the North Cape, in lat. $71^{\circ} 10'$. Its breadth, which is very unequal, is from 40 to 280 ms. It is naturally formed into two divisions, namely Northern, and Southern or proper Norway, separated from each other by the small Swedish province of Hermedahl. It is divided into the governments of Aggerhuys, Christiana, or Christiansand, Berghen, Drontheim, and Finmark. The whole embracing an area of 161,000 sqms., with an aggregate pop. of 930,000.

By the treaty of Kiel, January, 1814, Norway, against the free opinion of its people, was transferred from Denmark to Sweden. Denmark receiving in return Swedish Pomerania, and the Island of Rugen. From its rocky soil and northern position, Norway is not populous in proportion to its extent. The inhabitants, like the Swiss mountaineers, are exceedingly attached to their country. In Norway they have a particular code, called the Norway Law, compiled by Grieffelfeld, at the command of Christian V., the great legislator of this country. By this law, the palladium of Norway, the peasants are free, except in some aristocratic estates near Frederickstadt; and the benefits of this code were visible in the great difference in their appearance, between the free peasants in Norway, and the enslaved vassals of Denmark, though both were living under the same government. The inviolability of their laws, and the integrity of the kingdom were stipulated in the treaty of Kiel. The Norwegian peasants possess much spirit and fire in their manner; are frank, open, and undaunted, yet not insolent; never fawning, yet paying proper respect. Their principal mode of salute is by offering their hand; and when they are given or paid any trifle, the peasants, instead of returning thanks by words, or by a bow, shake hands with great frankness and cordiality. The same causes which affect the pop. of Norway, operate likewise on the state of tillage; for, although in some places vegetation is so quick, that the corn is sown and cut in six or seven weeks, yet the country does not produce sufficient corn for its own consumption. It is, however, exceedingly rich in pasture, and consequently produces much cattle. The horses are small, but strong, very active, and hardy. The fisheries, particularly on the W. coast, find employment and wealth for the natives, and supplied the finest sailors for the Danish fleet. The principal fish are salmon, cod, ling, and whiting; their livers also yield train-oil; and the smallest are given as winter fodder to the cattle. The extensive forests of oak and pine produce timber spars, beams, and planks, beside charcoal, turpentine, bark, fuel, and even manure; and the birch (the bark of which is used as a covering for the roofs of houses) not only supplies fuel, but also a kind of wine. The general exports are tallow, butter, salt, dried fish, timber, planks, horses, horned cattle, silver, cobalt, alum, Prussian blue, copper, and iron. It abounds in lakes and rivers, the former so large that they appear like inlets of the sea; but the rivers are in general of a short course, except the Glommen. The mountains are numerous, and generally clothed with pines and firs; the grand Scandinavian chain, which runs from S. to N., dividing this kingdom from Sweden, is known by distinct appellations; the chief are the ridges of Langfjall, Dofrafiel, Kolen, and Severnbi. The wild animals are the bear, lynx, wolf, fox, and hare; but the most singular creature is the lemming, or Norwegian mouse, of a reddish colour, and about five inches long. These animals proceeded in vast numbers from the ridge of Kolen to the sea, devouring every product of the soil in their course, and at last seem to devour each other.

The inhabitants carry on a considerable trade with foreign nations. Their exports are copper, wrought and unwrought; iron cast into cannon, stoves, and pots, or forged into bars; masts, timber, deal-boards, planks, marble, mill-stones, herring, cod, ling, flounders, cowhides, goat skins, seal skins, the furs of bears, &c. down, feathers, butter, tallow, train-oil, tar, juniper, and other sorts of berries and nuts. They have inexhaustible quarries of excellent marble, black, white, blue, grey, and variegated. Gold has likewise been found in a small quantity, and a considerable silver mine is at present wrought at Koningberg, at the risk of his Danish majesty. These were visited by Mr. Cox, who says that they formerly produced 70,000*l.*; but they now produce only 50,000*l.* The mines of cobalt, and the preparation of Prussian blue, are much more productive.

Norwich, ancient and populous city of Eng., the capital of Norfolk. It is seated on the Yare, which runs through it, and is navigable to Yarmouth without locks. Though, as it has been said, it is a populous city, yet there is void enough in it for another colony; and, from the intermixture of its houses with trees, it is called a city in an orchard. Its manufactures are generally sent to London, though considerable quantities are exported from Yarmouth to Holland, Germany, Sweden, Norway, &c. By a late calculation, from the number of looms at work in the city only, it appeared there were no less than 120,000 people employed in their manufactures of wool, silk, &c. in and about the town, including those employed in spinning the yarn used for such goods as are all made in this city. There is a stocking manufactory also here, which has been computed at 60,000*l.* a year. It is 43 ms. N. of Ipswich, and 109 NE. of London. Lon. 1° 20' E. lat. 52° 40' N. Pop. 1811, 37,256.

Norwich, tp. of U. C., in Oxford city, on the river Thames.

Norwich, pst. Windsor city. Ver., opposite Hanover, on Connecticut river, 21 ms. above Windsor. It is the seat of a military academy. Pop. 2000.

Norwich, pst. Hampshire city. Mass., 15 ms. W. from Northampton. Pop. 1820, 849.

Norwich, city, pst. and seat of justice, New London city. Conn., on Thames river, at the head of tide navigation, 13 ms. above New London, and 38 ms. SE. from Hartford. Lat. 41° 34' N. lon. W. C. 4° 55' E.

The Thames is formed by the junction, at Chelsea landing, of the Shetucket and Yantic rivers. Norwich, the city, is on the Yantic, but is generally considered to include Chelsea landing and Beacon Hill. The Yantic, about a mile above its union with the Shetucket, is precipitated over a fall which affords admirable facilities for manufacturing establishments, many of which are in operation. Woollen and cotton cloths, morocco, and common leather, paper, &c. are extensively produced. Saw and flour mills abound. Chelsea landing is the port, and seat of commercial transactions. Norwich pro-

per is 3 ms. up the Yantic, and contains the public buildings. Beacon Hill is again W. from Norwich. The scenery around Norwich is highly pleasing, and heightened by a rich, well cultivated country. Pop. of the tp. 1810, 3528, in 1820, 3634.

Norwich, tp. pst. and seat of justice, Chenango co. N. Y., on Chenango river, 49 ms. a little W. of S. from Utica, and 60 E. from Ithaca. Pop. of the tp. 1810, 2550, in 1820, 3257. Lat. $42^{\circ} 32'$ N. lon. W. C. $1^{\circ} 28'$ E.

It has a good citadel, and was capital of Ingria before Petersburg was built. It is 25 ms. E. of Petersburg. Lon. $31^{\circ} 9'$ E. lat. $59^{\circ} 56'$ N.

Nota, ancient, large, and handsome town of Sicily, and capital of Val-di-Nota. It was ruined by an earthquake in 1693, but another town was built at some distance from it, called Nota Nuovo. It is 22 ms. SW. of Syracuse. Lon. $15^{\circ} 19'$ E. lat. $36^{\circ} 50'$ N.

Notre Dame des Anges, signiory, Quebec co. L. C. opposite Quebec.

Nottaway, river, rises in Prince Edward, Nottaway and Lunenburg co. Virg., and flowing nearly E., between Dinwiddie, Brunswick and Greenville into Sussex; there turns to SE. through Sussex and Southampton, joins Blackwater just within the limits of N. C. Entire comparative course 120 ms. Below the junction of the Nottaway and Blackwater, the united streams flow S. about 10 ms., and uniting with the Meherrin, form the Chowan river.

Nottaway, co. Virg.; bounded by Dinwiddie SE., Brunswick S., Lunenburg SW., Prince Edward NW., and Amelia NE. Length 22, mean width 12 ms; area 264 sqms. It is washed in all the SW. borders by the Nottaway, and about half the co. drained by the creeks of that river. Its NE. moiety is drained by Flat creek, Deep creek, Winticomock, and others flowing into Appomatox river. Pop. in 1820, 9658. Lat. 37° N. and lon. W. C. 1° W. intersect in this co.

Nottelen, town of Germany, in the circle of Westphalia, in the bishopric of Munster, 7 ms. W. of Munster.

Nottingham, co. town of Nottinghamshire, Eng. It is situated on a rocky eminence, and is a populous and handsome town, distinguished by its spacious market-place, and noted for its excellent ale. It is one of the principal seats of the stocking manufacture, particularly of the finer kinds, as those of silk and cotton, and has also a manufacture of coarse earthen ware. It has three parish churches, and several meetings for the dissenters. It is remarkable for its vaults, or cellars, cut into the rock; and in the neighbourhood are many coal pits, which afford plenty of fuel, at little expense. Nottingham

is seated on a river which communicates with the Trent, 1 mile to the S. It is 16 ms. E. of Derby, and 123 N. by W. of London. Lon. $1^{\circ} 2'$ W. lat. $52^{\circ} 58'$ N.

Nottingham, a hilly tp. Harrison co. Ohio, 77 ms. W. from Cadiz. This tp. contains the village of Moorfield. Pop. in 1820, uncertain.

Nottinghamshire, co. of Eng., 48 ms. long and 20 broad; bounded on the N. by Yorkshire and Lincolnshire, on the E. by the latter co., on the S. by Leicestershire, and on the W. by Derbyshire. It lies in the diocese of York: contains 95,000 inhabitants, and sends 8 members to parliament. No co. in Eng. enjoys a pleasanter and healthier air. As for the soil, it differs widely in various parts of the co. Towards the W. where lies the Forest of Sherwood, which takes up the greatest part of it, it is sandy, but the S. and E. parts, watered by the Trent, and rivers that fall into it, are fruitful both in corn and pasture; but the former produces little, except wood, coal, and some lead. The principal rivers are the Trent and Idle; the former inferior only to the Severn, Thames and Humber. Pop. in 1801, 140,350, in 1811, 162,000, and in 1821, 186,873.

Novalle, small, but populous town of Italy, 10 ms. NE. of Padua, and 12 SW. of Treviso. Lon. $12^{\circ} 10'$ E. lat. $45^{\circ} 29'$ N.

Novara, ancient and strong town of Italy, in the duchy of Milan, capital of the Novarese. It is seated on an eminence, 12 ms. NE. of Verceil, and 25 ms. W. by S. of Milan. Lon. $8^{\circ} 38'$ E. lat. $45^{\circ} 25'$ N.

Nova Scotia, or *Acadia*, province of British N. America, bounded on the W. by the U. S., on the N. by the river St. Lawrence, on the E. by the gulf of that name, and on the S. by the Atlantic and Bay of Fundy; being so indented by the latter, that its eastern part forms a peninsula. It extends from Cape Sable, its most southern point, in lat. $43^{\circ} 23'$ to $49^{\circ} 30'$ N., and from $60^{\circ} 15'$ to 67° W. lon. In 1784, part of this country was formed into a new province. See *New Brunswick*. The most part of the country is one continued tract of forest, and the soil, except on the rivers' banks, is thin and barren. Halifax is the capital. Pop. in 1825, about 150,000, of which probably 10,000 were contained in Halifax.

Nova Zemlia, *Nova Zembla*, large and deso-

late island, lying off the northern coast of Asia, and NE. of Europe, extending from lat. 69° to 76° N. It is about 500 by 240 ms. It is uninhabited, and only visited by fishermen, in summer.

Novellara, town of Italy, capital of a small district of the same name, with a castle, where the sovereign resides. It is 17 ms. E. by N. of Parma, and 20 1/2 by W. of Mantua. Lon. $11^{\circ} 4'$ E. lat. $44^{\circ} 48'$ N.

Novigrad, strong place of European Turkey, in Serbia, seated near the Danube, 35 ms. N. of Nissa.

Novogorod, city of Russia, capital of a government of the same name, and formerly called Great Novogorod, to distinguish it from other towns of the same appellation. It was for a long time governed by its own dukes; and was in fact, a republic, under the jurisdiction of a nominal sovereign. Its territory extended to the N. as far as the frontiers of Livonia and Finland; composing great part of the province of Archangel, and a large district beyond the NW. limits of Siberia. It was the great mart of trade between Russia and the Hanseatic cities, and made the most rapid advances in opulence and pop. Its power was so great, and its situation so impregnable, as to give rise to a proverb, Who can resist the gods and great Novogorod? But in the 15th century, this independent republic was obliged to submit to Ivan Basilowitz I., grand duke of Russia. It continued, nevertheless, the largest and most commercial city in Russia, and contained at least 400,000 souls. It was first desolated, in a manner, by the cruelties of Ivan Basilowitz II.; but its splendour was not totally eclipsed until Peter the great built Petersburg, to which he transferred all the commerce of the Baltic that had before centered here. It now contains scarcely 7000 souls; and a vast number of churches and convents stand melancholy monuments of its former magnificence. The town stretches on both sides of the Volkoff, a river of considerable depth and rapidity, which separates it into two divisions; namely, the Trading Part and the Quarter of St. Sophia: in the latter is a cathedral of the same name, in which several princes of the ducal family of Russia are interred. Novogorod is situate near the N. end of the Lake Ilmen, 125 ms. SSE. of Petersburg. Lon. $31^{\circ} 45'$ E. lat. $58^{\circ} 25'$ N.

Novogorod, Niznei, city of Russia, capital of a government of the same name. The trade is considerable, and the shops richly furnished with all kinds of foreign and home goods. It

is seated at the conflux of the Occa with the Volga, 280 ms. E. by N. of Moscow. Lon. $46^{\circ} 30'$ E. lat. $56^{\circ} 34'$ N.

Novogorod, Sieverskoi, town of Russia, capital of a government of the same name, seated on the Desna, 340 ms. SW. of Moscow. Lon. $32^{\circ} 40'$ E. lat. $53^{\circ} 20'$ N.

Novogrodek, town of Lithuania, capital of a palatinate of the same name, seated on a hill in a vast plain, 80 ms. S. by E. of Wilna. Lon. $26^{\circ} 8'$ E. lat. $53^{\circ} 25'$ N.

Noyon, town of France, in the department of Jura, with a castle, seated on a mountain, 20 ms. SE. of Salins.

Nubia, country of Africa, bounded on the N. by Egypt, E. by the Red Sea, S. by Abyssinia and Darfoor, and W. by Bornou. It is about 600 ms. in length, and 450 in breadth. The Nile runs through it; on the banks of which it is fruitful, but in other places barren, sandy, and destitute of water. The productions of the country are gold, elephants' teeth, civet, and sandal-wood; and a great many slaves are sent into Egypt. The principal towns known to the Europeans are Dangola, and Sennaar. Nubia and Sennaar, are confounded, and though both are but vaguely defined, they appear to be distinct. The latter more particularly designates the regions above the confluence of the Nile with the Tacazzé, and the former that immediately below, towards Egypt. After leaving the high table land from N. lat. 8° to 15° all the branches of the Nile fall rapidly, and the low plains of Sennaar, and Nubia are parched by a heat entirely unknown in Abyssinia. Bruce states that the surface of Sennaar is depressed at least one mile below that from whence the Nile takes its source, and speaks favourably of the soil and temperature of Abyssinia, but describes the features and air of Nubia and Sennaar in very unfavourable terms.

The Tacazzé joins the Nile at N. lat. 18° nearly.

Nuestra Senora-de-la-Paz, town of S. America, in Peru, and in the audience of Los Charcas. It is seated at the foot of a mountain, in a valley abounding with vines and fruits, which begin to be ripe in January. Lon. $64^{\circ} 5'$ W. lat. $16^{\circ} 50'$ S.

Nuremberg, or *Nuremberg*, free imperial city of Germany, capital of the circle of Franconia, with a university. It is 6 ms. in circumference, surrounded by high walls, flanked with 36 towers; and the river Pegnitz, over which are 12 stone bridges, runs through the middle, and divides it into two parts. The government is aristocratical; and the townsmen are divided into 8 quarters, each of which has a captain. The burghesses are very industrious, and the best workmen in arts; their maps and prints are in high esteem, as well as their musical and mathematical instruments; nor are they less curious in clock work, and in the several manufactures of iron, steel, ivory, wood, and alabas-

ter. The best toys are made here, which are commonly known in Eng. by the name of Dutch toys. Here is a famous academy for painting, an anatomical theatre, and a public library. The ancient and superb castle or palace, which the inhabitants bought of the burgaves, is still standing at the extremity of the city; and the arsenal is one of the best in Germany. The houses are built of free-stone, and are four or five stories high. No Jews are suffered to lodge a single night here, nor can they enter the city at all without paying a certain tax. Nuremberg, in process of time, has obtained a considerable territory, 100 ms. in circumference, in which are two large forests. It is 51 ms. NW. of Ratisbon, 62 N. of Augsburg, and 350 W. by N. of Vienna. Lon. $11^{\circ} 12'$ E. lat. $49^{\circ} 27'$ N.

Oases, in the plural; Oasis singular; are isolated fertile spots in Africa, entirely surrounded by sandy deserts. The Oases are scattered at various distances, and are of unequal relative extent. The existence of these detached vegetable spots, has been produced by water either approaching near the surface, or actually issuing out in springs.

Oaxaca, state of Mexico, bounded by the Atlantic Ocean S., Puebla W. and NW., Vera Cruz N. and NE., and Guatemala E. Length from E. to W. 240 ms.; mean width 180; area about 34,000 sqms. Between lat. $15^{\circ} 40'$ and $18^{\circ} N.$

This state is one of the most delightful countries on this part of the globe. The beauty and salubrity of the climate, the fertility of the soil, and the richness and variety of its productions, all combine to minister to the prosperity of its inhabitants; therefore, this province has accordingly from the remotest periods, been the centre of an advanced civilization. In Puebla, Mexico, and Valladolid, the substrata are composed of basaltes, amygdaloid, and porphyry; but in the Mixtecan and Zapotecan ranges of Oaxaca, granite and kneiss are the prevailing rocks. The mountain summits of Oaxaca have not been scientifically determined, but from the circumstance, that from some of the peaks, the Gulf of Mexico and the Pacific Ocean are visible, the elevation must exceed 7000 feet.

The surface of this region though mountainous, may be considered in general as an inclined plane, sloping from 7000 feet to the level of the Pacific Ocean. Some very remarkable Aztec ruins are found in Oaxaca. See *Pyramids, American*.

The list of vegetable productions of Oaxaca, is commensurate with nearly all plants cultivated by civilized man in the temperate zones, and tropical regions. Its principal rivers are, the Chimalapa, falling into the Gulf of Tehuantepec, and the Chicometepec, entering the Pacific Ocean, in the SW. part of the state.

Its most productive mines are, those of Villalta, Zolaga, Yxtexpi, and Totomostla.

The cities of Oaxaca, are Oaxaca, San Antonio de los Tules, and Tehuantepec.

Below Stettin it forms a large lake or bay, called Gross Haff, and then enters the Baltic Sea by three channels, called Peene, Swin, and Diwelow; between which lie the islands of Usedom and Wollin.

The Oder is not entirely a river of Germany, the largest of its tributaries, the Warta flowing from Poland. The Oder proper rises in Moravia, about 25 English ms. E. from Olmütz; first pursues a course nearly NE., but gradually curving to the N., enters Silesia, and turning to NNW. drains that fine country nearly 250 ms. It then enters Upper Saxony, through which the residue of its course is continued. The Warta rises in the Palatinate of Cracow in Poland 50 ms. E. from Brieg in Silesia, flows nearly N. 100 English ms. over the palatinates of Cracow, Siradia, and part of Kalish; assumes a NW. course, which it pursues, with many partial windings nearly 200 ms. to Landsberg, where it receives, also from Poland, the Netze. The Netze has its principal source from Lake Goplo between the Warta and Vistula; first flows NW. 70 English ms., to the connecting canal which unites this stream to the Vistula below Thorn; and from thence W. 120 ms. to its junction with the Warta at Landsberg. Below Landsberg the united streams flow a little S. of W. about 50 ms. to Kustrin, where they are lost in the main volume of the Oder. Between Kustrin and Oderberg, in a general distance of 35 ms. the Oder is made navigable by a canal along or near the eastern side. The entire length of the Oder by the Oder proper, is upwards of 400 English ms., and nearly as much following the Warta. The noble valley of the Oder is contained between N. lat. $49^{\circ} 25'$, and 54° ; being about 350 ms. in length, with 150 mean breadth, and draining an area of 52,500 sqms. It is united to the Elbe by a canal from between Oderberg and Freyeuwalde, into the Havel, and thence down the latter by Libenwalde, Spandau, and Potsdam, into the Elbe above Weiben. Another canal joins the Oder with the Spree, near Milrose. See *Havel*, and *Spree*. See also, *Stettin*, and *Bromberg*. The Oder is navigable from Brieg in Silesia, to the Baltic, upwards of 300 ms. A cut called the New Oder, was begun in 1753, from Kustrin, and a dredging machine, worked by steam, was promoted a few years past in Eng. to deepen the bar at the mouth of the river. The Warta is navigable 200 ms. into Poland. The main navigation passes along the branch called the Netze, as far as Brackel, where commences the canal of Bromberg, constructed between 1772-5 by Brackenhal, under the direction of Frederick the Great. Fall 67 feet from the summit level of the Warta into the little river Brabe at Bromberg.

Oderberg, town of Moravia, on the confines of Silesia, with a castle; seated on the Oder, at the influx of the Elsa, 18 ms. NNW. of Teschen.

Oderberg, town of Brandenburg, in the Middle Mark, situate on the Oder, 25 ms. NW. of Custrin.

Odernheim, town of Germany, in the palatinate of the Rhine; seated on the Selfz, 14 ms. S. of Mentz.

Odernheim, town of Germany, in the duchy of Deux Points; seated on the Glan, near its conflux with the Nahe, 28 ms. SW. of Mentz.

Odessas, fortified seaport of Russia, in the government of Catherinenslaf, seated on a gulch of the Black Sea, 44 ms. W. by S. of Uzakof. Lon. $30^{\circ} 24'$ E. lat. $46^{\circ} 28'$ N. This place, formerly an obscure village, was chosen by Catherine II., in 1792, as a suitable place to form a Russian emporium on the Black sea. The place is spacious, deep, and bottomed with fine sand or gravel. The adjacent regions on the Dniester, Bog, and Dniester, are in a high degree productive. Its advance has been extremely rapid; in 1804, it contained 15,000, in 1830, 36,000, and at present, (November, 1822,) it is probably above 40,000 inhabitants. Its chief export article is grain. Tallow, hides, &c. are also exported in small quantities. The prospect is fair, that Odessa will become one of the greatest marts of the eastern continent.

Odeypour, town of Hindoostan, capital of Jushpour, in the province of Orissa. It is 60 ms. NE. of Rutenpour, and 220 NW. of Cuttack. Lon. $83^{\circ} 22'$ E. lat. $22^{\circ} 37'$ N.

Odihun, town of Eng. in Hampshire, on the Basingstoke canal, 24 ms. NE. of Winchester, and 43 W. by S. of London.

Oebfeld, town of Lower Saxony, in the duchy of Magdeburg, seated on the Aller, 22 ms. NE. of Brunswick.

Oedenburg, or *Soprony-Norwége*, palatinate of West Hungary, commencing about 40 ms. SSE. from Vienna.

Oederan, town of Upper Saxony, in Misnia, situate near the Flohe, 9 ms. ENE. of Chemnitz.

Oeland, island of Sweden, in the Baltic, separated from the coast of Gothland, by a strait 12 ms. broad in the narrowest part. It is 60 ms. long, but not more than 9 broad. The N. part has fine forests, and quarries of excellent freestone; but the S. part is more level; and more fertile. Both parts abound in aluminous earth. Boholm is the chief town, seated on the strait, 12 ms. ENE. of Calmar. Lon. $16^{\circ} 50'$ E. lat. $58^{\circ} 48'$ N.

Oelfelt, town of Lower Saxony, in the duchy of Magdeburg, on the Aller, 25 ms. E. of Brunswick. Lon. $11^{\circ} 20'$ E. lat. $52^{\circ} 27'$ N.

Oels, town of Silesia, capital of a principality of the same name.

Oels, principality of Silesia, forming part of the government of Breslau.

Oelsnitz, town of Upper Saxony, in the territory of Voigtland, seated on the Elster. Lon. $12^{\circ} 10'$ E. lat. $50^{\circ} 19'$ N.

Oesel, island of the Baltic, on the coast of Livonia, at the entrance of the Gulf of Finland. It is 74 ms. long and 50 broad, and has two fort. It formerly belonged to the Swedes, but now to Russia. Its capital is Arensburg.

Oeting, town of Upper Bavaria. It is divided

into the Upper and Lower Town, and is seated on the Inn, 8 ms. NW. of Burkhausen. Lon. $12^{\circ} 44'$ E. lat. $48^{\circ} 14'$ N.

Oeting, or **Oetingen**, town of Suabia, capital of a city of the same name. It is seated on the river Wirnitz, 12 ms. NNW. of Donawert, and 55 WNW. of Ingolstadt. Lon. $10^{\circ} 40'$ E. lat. $48^{\circ} 58'$ N.

Offa's Dike, entrenchment cast up by Offa, a Saxon king, to defend England against the incursions of the Welsh. It runs through Herefordshire, Shropshire, Montgomeryshire, Denbighshire, and Flintshire.

Ofanto, river of the kingdom of Naples, which rises in the Appennines, passes by Conza and Monte Verde, separates Capitanza from Benevento and Terri-di-Bari, and falls into the Gulf of Venice, near Barletta. It is the ancient *Avellus*.

Offenbach, town of Germany, in the circle of Franconia, on the Maine, 5 ms. E. of Francfort. Lon. $8^{\circ} 48'$ E. lat. $49^{\circ} 54'$ N.

Offenburg, town of Suabia, on the Kintzig, 12 ms. SE. of Strasburg, and 28 S. of Baden. Lon. $8^{\circ} 1'$ E. lat. $48^{\circ} 31'$ N.

Offida, town of Italy, in the Marquisate of Ancona, 26 ms. S. of Loretto. Lon. $13^{\circ} 46'$ E. lat. $42^{\circ} 53'$ N.

Offutt's, psto. Hampshire cty. Virg., 93 ms. NW. from W. C.

Ogden, psto. Monroe cty. N. Y., 10 ms. a little N. of W. from Rochester. Pop. 1820, 1435.

Ogden's, psto. Scott cty. Miss.

Ogdensburg, psto. and seat of justice, St. Lawrence cty. N. Y., on St. Lawrence river, on the point below the mouth of Oswegatche. The site of this town is high, bold, and pleasing, and the mouth of the Oswegatche affords an excellent harbour. It is the lowest point of ship navigation, on St. Lawrence from lake Ontario. The Gallop rapids commence about 5 ms. below. It is the seat of some mills, and manufactures, and stands opposite to Prescott. In U. C., 63 ms. by land NE. from Sackett's Harbour, and about 120 ms. above Montreal. Pop. 1820, 300.

Ogeechee, river of Geo., rising in Greene cty., and flowing SE. between the confluent of the Altamaha and Savannah rivers, falls into the Atlantic Ocean by Ossabow Sound, 20 ms. S. from Savannah. It passes by Georgetown in Warren, and Louisville in Jefferson cty.

Oginaki canal, between the governments of Bielsk and Minak, in Russian Poland. It commences in the Iasiolda, which falls into the Prypiet, and thence into the Dnieper, and terminates near Slonim, in the Schara, a branch of the Niemen. It was made navigable in 1784, and completed in 1802. By this canal, and by the Dnieper, and Niemen, a water communication is opened between the Baltic and Black seas.

Oglethorpe, cty. Geo.; bounded by Washington E., Greene S., Clark W., Madison NW., and Broad river, or Elbert NE. Length 22, mean width 20 ms.; area 440 sqms. It lies between Oconee and Broad rivers, and is drained by their confluent. The surface moderately hilly, and soil productive. Staples, cotton, grain, &c. Chief town, Lexington. Pop. 1820, 646. Ctl. lat, $33^{\circ} 54'$ N. lon. W. C. $8^{\circ} 23'$ W.

Oguinquit, pstv. York ct. Maine.

Ohio, NW. tp. of Alleghany cty. Penn.

Ohio river. Pop. 1820, 1477.

Ohio, one of the western tps. of Beaver cty. Penn., on, and N. from Ohio river. Pop. 1820, 1075.

Ohio, cty. Virg.; bounded by Washington and Greene cities in Penn. E., Tyler cty. in Virg. S., the Ohio river W., and Brooke cty. in Virg. N. Length 32, mean width 10 ms.; area 320 sqms. The surface of this cty. is excessively broken by hills, and yet the soil is almost uniformly productive. Beside the Ohio river, which washes its western border, it is watered by Short creek, Wheeling creek, Grave creek, Fish creek, and Fishing creek. The alluvial bottoms of the Ohio, and the above creeks, are exuberantly fertile. Staples, grain, flour, pork, beef, live stock, &c. Chief town, Wheeling. Pop. 1820, 9182. Ctl. lat. 40° , lon. W. C. $3^{\circ} 42'$ W.

Ohio, cty. Kent.; bounded by Butler, SE., Green river, or Muhlenburg N. and SW., Davies NW., Brackenridge, N., and Grayson NE. Length 32, mean width 20 ms.; area 640 sqms. Chief town, Hartford. Pop. 1820, 3879. Ctl. lat. $37^{\circ} 30'$ N. lon. W. C. $9^{\circ} 40'$ W.

The longest line in the state of Ohio, NE. and SW., is 300 ms. Its width between Pensacola and Indiana 227 ms.

Though not marked by any of those bold and sublime features which are peculiar only to mountainous countries, Ohio presents some very remarkable traits, which call forth the utmost attention of the statist and philosopher.

For the general features of Ohio, see article *Mississippi basin*, section Ohio river.

When it is known that the vale in which the Ohio flows is from 300 to 400 feet below the common level of the adjacent country, and when it is also known, that an immense table land extends through the state in nearly a NE. and SW. direction, the origin of the phenomena, which serve to form its physiognomy, is easily traced. The rugged appearance of the Ohio banks in all their extent give an idea of unevenness to the state, which an examination of its interior must correct.

Like all other sections of the U. States, Ohio cannot be designated by any general character; and similar to every newly settled part of our country, from the attention of early emigrants

being naturally turned towards the best soil, the river alluvial and rich prairie margins have contributed to give too high colouring to descriptions of its lands.

As far as a general view can be adopted, the following may exhibit the great outlines of the state.

Fifty or sixty ms. from the Ohio river hilly, and in part very rugged; formed by abrasion of water.

The region in the rear of the hilly is not level, though not rising into hills of any considerable elevation; it is rolling land, and presents features in exact accordance with what must rise from the theory we have adopted. The country becoming more level approaching the interior land, until finally smoothing into the elevated plain from which the rivers flow into Lake Erie, or into Ohio river.

The third variety is that of the plains, or table land. This natural section contains very various species of soil, from rich river alluvial and prairie, to sterile oak barrens and marshes; the latter to considerable extent.

Another remarkable natural section of Ohio lies along Lake Erie. The slope of the country rises gradually along Ohio river towards the sources of the Muskingum, and Cuyahoga. On the latter, a sudden and much more inclined depression falls towards the lake. This dividing line, for ridge it cannot be called, does not conform to the bearings of Erie. At the NE. angle of the state its apex is within 3 ms., whilst towards the sources of Maumee, it has receded above 100 ms. from the lake.

A series of falls interrupts every river of Ohio, flowing into Erie. Those which flow into Ohio river, except Muskingum, though all are rapid in their descent, none have falls. The small cataract at Muskingum, at Zanesville, is the last water-fall in any stream of magnitude worthy notice, on the north-western slope of the Ohio basin. It may not be irrelevant to remark, that on all the vast extent W. from Zanesville to the sources of the Plate and Kansas rivers, and NW. to the sources of Yellow Stone and Missouri rivers, no cataract worthy notice has been discovered. Below the Great Kenhawa, on the south-eastern slope, their occurrence is equally rare. The rapids of Ohio and Muscle shoals, in Ten., are only approaches to falls, and both are merely strong rapids, the latter only obstructing up stream, both admitting down stream navigation. Indeed exemption from impediments to commercial intercourse may be constantly kept in view, as one of the most felicitous features of the whole Mississippi basin. An exemption to an equal extent can no where else be found on the globe, except in the basins of the Plate, Amazon, and Orinoco rivers, in South America.

It would be a very interesting solution to determine the relative extent of the various natural sections of Ohio. Such an estimate would be so vague, upon the uncertain data we possess, that no satisfactory result can be obtained. It may be observed that the three sections, hilly, rolling, and level, are nearly of equal extent, or about 13,300 sqms. each; and that the whole state is, though unequally so, divisible.

The result of the settlement of this state proves its general productiveness.

I have been myself over a large part of the southern and northern frontiers of Ohio, and have every where found the soil favourable to the purpose of agriculture. No part of what is called barrens, or swamp in Ohio, are so inclaimable as the sandy shores of the Carolina and Florida, the sea marshes of Lou. and Tex. or so unproductive as the interminable pine tracts which reach from the Roanoke to the river.

In point of position, its local is in many respects favourable; but its advantages are more appropriate to an interior than exterior communication. The quantity of its arable soil, will no doubt, combined as it is by many local causes, superinduce a very dense population in Ohio; circumstances however, common to all will produce in Ohio, Indiana, Illinois, and Michigan, a mass of population by far exceeding that of any other equal continuous extent in the United States.

The most common mineral productions of Ohio are, coal and iron. Coal is found along the Ohio and Muskingum rivers, and iron ore in various parts of the state. Water impregnated with muriate of soda, common salt, has been found, but not in any quantity to render the manufacture of salt an object of any considerable value.

The staples of this state are numerous and important, consisting of wheat, rye, oats, Indian corn, whiskey, apples, cider, live stock, and salted provisions. The most frequented commercial outlets are, by the Ohio, and Mississippi river, to New Orleans; by lake Erie and Detroit river, to Detroit; by lakes Erie and Ontario, and St. Lawrence river, to Montreal; and by land, to Pittsburg, N. York, Philadelphia, and Baltimore.

The seat of government is at Columbus, but by far the largest town in the state, is the city of Cincinnati, containing, at present, about 10,000 inhabitants. Steubenville, Zanesville, Cleveland, and several others, are flourishing places, containing a population of from 2,000 to 3,000.

The civil and political subdivisions of Ohio are the following, with the result of the census of 1820 annexed.

Ohio is calculated by Mr. Kilbourn, in his Gazetteer, to contain 40,000 sqms. That calculation is, no doubt, nearly correct; therefore, allowing for surface, irreclaimable swamps, and other uncultivated tracts, the aggregate of the cities will approach very closely to the real habited land of Ohio.

The cities of Crawford, Hancock, Garden, Henry, Marion, Paulding, Putnam, Seneca, Van Wert, and Williams, have been formed subsequent to the last census, and, being mostly in

the new purchase, remain in great part uninhabited. These cities, taken together, amount to 5427 sqms. The aggregate of the census of 1820, was but little influenced in its amount by the few inhabitants then upon this surface, an area approaching one-seventh part of the superficies of the state. Deducting 5427 sqms. from 38,260, leaves 32,833, as the really inhabited surface of Ohio. The latter area has, therefore, at present, if we make but a moderate allowance for the augmentation since the census was closed, upwards of 18 to the sqm. The uninhabited, or thinly peopled cities, more than equal, in point of fertility of soil; the general aggregate surface of the state, and will consequently admit, at least, an equal density of population, or permit the addition of nearly 100,000 inhabitants to the state.

The progressive population of Ohio, is an unmatched phenomenon in the history of colonization. In 1783, the ground now embraced within its limits, was one wide waste. In 1790, 3000 civilized inhabitants were only found on its surface. In 1800, they had increased to 42,156. In 1810, the census presented an abstract, containing 227,843. In 1820, the state possessed 581,434 inhabitants. It demands a very limited knowledge of the relation of Ohio, its admirable position, its exuberant soil, and above all, the effects which must ensue from opening the western canal of New York, to foresee an augmentation of people in Ohio, more rapid in the next ten years, than in any equal antecedent period.

Ohio, in 1820, contained 576,572 white inhabitants, and 4723 free coloured persons. In point of classification, the inhabitants were composed of:

| | |
|-----------------------------|---------|
| Foreigners not naturalized, | 3,495 |
| Engaged in agriculture, | 110,921 |
| Do. in manufactures, | 18,956 |

Ohio became a state of the United States in 1803.

A canal line has been commenced in the state of Ohio, to unite Lake Erie with Ohio, but in so incipient a state, as to preclude any detail at this time. The operations are, however, in a very active state, and a speedy completion may be safely anticipated.

Ohio, river, U. S., the great NE. branch of Mississippi. See *Mississippi*, section Ohio.

Ohio, southern tp. Gallia co. Ohio. Pop. 1820, 493.

Ohio, SW. tp. Clermont co. Ohio. Pop. 1820, 2791.

Oil creek falls, in Youngs Bay river, Fayette co. Penn., eleven or twelve ms. NE. from Uniontown.

Oil creek, break, Penn., rising in the NE. part of Crawford, and SW. of Warren co., flows S., and falls into the Alleghany river 10 ms. above Franklin. On it is a remarkable spring, on the waters of which a mineral oil is found to float.

Oil creek, SW. pt. Crawford co. Penn., 20 ms. NNE. from Franklin. Pop. 1820, 493.

Oil spring, Calhoun co. N. Y.

Oisans, town of France, in the department of Isere, and the province of Dauphiny, 28 ms. SE. of Grenoble. Beaumont is the capital. Long 6° 25' E. lat. 45° N.

Oise, department of France, including part of the late province of the Isle of France.

Oise, river, which has its source in the Ardennes, and falls into the Seine, near Pontoise. It gives name to the above department.

Oka, river of European Russia, great SW. branch of the Volga. It rises in the government of Smolensk, Kalouga, and Orel, flows N.E. by E., and joins the Volga at Nishnei-Novogorod after a comparative course of 600 ms. It passes by Orel, Kalouga, Kolomna, Niagara, Spask, Kassimov, and Murom. Mosqua, on which stands Moscow, is one of its northern branches. It is one of the best navigable secondary rivers in Europe, being passable with boats to Orel, near its source.

Opelousas, cty. Lou., bounded by the Gulf of Mexico SW., Sabine river, or the province of Texas W., the parishes of Natchitoches and Atapides N., parish of Avoyella and Attachalaya river NE., and Attacapas SE. Length 110 ms., mean width 70; area 7700 sqms. All the southern, southeastern, and eastern part of Opelousas is one vast plain. The northwest and north-

ern sections, swell into hills of moderate size. In point of soil, it is divisible into three distinct regions. Towards the Gulf of Mexico, it is marshy, but rising gradually into arable prairies with a thin sterile soil. This character of country is followed, advancing N., by an immense pine forest, out of which flow numerous creeks falling into Sabine; the Calcasieu river, and the Nezpique river, or northwestern branch of Mermentau. The soil of the pine tract is also sterile. Advancing to the eastern part of the city, washed by the Teche, Boeuf, and Courtaubieu, a total change takes place, the soil is exuberantly productive, and in part excessively heavy timbered. The northern and eastern parts of Opelousas are covered by a dense forest. The residue open prairies. It is emphatically the pastoral section of Lou., and contains the most numerous individual flocks of cattle in the U. S. Farming is, however, extensively pursued in the eastern part of the city. Staples, cotton, beef, tallow, hides, live stock, such as horses, mules, horned cattle, and some sheep. It is watered by the Sabine, Calcasieu, and Upper Teche, flowing into the Gulf of Mexico. A low, uninhabitable, and annually overflowed tract, indeed extends from the arable border of the Teche to the Atchafalaya. See *Courtaubieu, Louisiana, Mississippi, &c.* For the ordinary municipal regulations of that part of Lou., it is designated the parish of St. Landré. Pop. 1820, 10,085. Orinoco, river of the first rank in S. America. It rises in the mountains of Guiana, and flows about 300 ms. to the S.; it thence turns W. 150 ms., and receives the Cassiquari from the SW. The latter communicates with the Rio Negro, branch of the Amazon. Below the mouth of the Cassiquari, the Orinoco turns to the NW. to St. Fernando, where it unites with Guayari, an immense stream, little if any inferior to the Orinoco. The united streams assume a N. course to the mouth of the Vichada, another large western tributary. Immediately below its junction with the Vichada, the Orinoco pours its waters down the cataract of Atures, 760 ms. below its source, and 740 above its discharge into the Atlantic Ocean. The cataracts are in lon. W. C. 8° 55' E. and lat. 5° 1' N. About 100 ms. below the cataracts the volume of the Orinoco is enlarged by the Meta, a large river flowing from the Andes 500 ms. by comparative courses. Below its junction with the Meta 150 ms., the Orinoco is again swelled by the Apure, a very considerable branch flowing from the NW. and W. about 500 ms., and drawing its sources from the mountains of Varinas and Venezuela. From the cataracts, the Orinoco gradually turns more to the E., and below the discharge of the Apure, assumes a course a little N. of E., and falls into the Atlantic Ocean by a wide delta, between 14° and 17° E. from Washington, and from lat. 8° 30' to 10° N. The entire comparative course of the Orinoco is about 1500 ms., and the area of the basin it drains 400,000 sqms. About 100 ms. above its mouth it receives the Paraguay, or Oarom, the only large tributary which augments its volume from the S. See *Oarom* and *Paraguay*, of *Orinoco*.

Only the S., or main channel, of Orinoco is navigable for large vessels. For boats few rivers of the world afford a more extended and less interrupted navigation. The entire basin of this great river is in the republic of Colombia.

Orkney Islands, or *Orkneys*, ancient Orcades, a cluster of islands to the N. of Skld., from which they are separated by Pentland Frith. They lie between $57^{\circ} 35'$ and $49^{\circ} 16'$ N. lat., and are 26 in number, of which one greatly exceeds the others in extent. This, like the principal one of *Shetland*, is sometimes dignified with the appellation of Mainland, but is more frequently called *Pomona*. Beyond this island, to the NE., are seen, among others, Rowsa, Eglisha, and Westra, Shappinsha, and Eda, Stronsa, Sanda, and N. Ronaldsha; and to the S. appear Hoy and S. Ronaldsha, with others of inferior note. The currents and tides which flow between these islands are rapid and dangerous; and near the small isle of Swinna are two whirlpools, very dangerous to mariners, especially in calms. Springs of pure water are found in all the mountainous parts of these islands, and there are numerous lakes and rivulets abounding in fish. The climate of these islands in summer is moist and cold, but in winter there is never much snow, and that lies only a short time. Preceding the autumnal equinox, they are visited by dreadful storms of wind, rain, and thunder. The coast affords numerous bays and harbours for the fisheries. The chief exports are linen and woollen yarn, stockings, butter, dried fish, herrings, oil, feathers, and skins of various kinds, and kelp. The English language prevails in all these islands, although there are many words in the Norse, or Norwegian, still in use. The inhabitants have the general character of being frugal, sagacious, circumspect, religious, and hospitable.

Oude, province of Hindoostan Proper, subject to a nabob, whose dominions lie on both sides of the Ganges, occupying (with the exception of the district of Rompour) all the flat country between that river and the northern mountains, as well as the principal part of that fertile tract lying between the Ganges and Jumna, known by the name of Dooab, to within 40 ms. of the city of Delhi. Oude and its dependencies are estimated at 360 ms. in length from E. to W., and in breadth from 150 to 180.

Oude, ancient city of Hindoostan Proper, in the province of Oude, the remains of which are seated on the Gogra, nearly adjoining Fita-bad. It is said to have been the first imperial city of Hindoostan, and to have been the capital of a kingdom 1200 years before the Christian era; and it is frequently mentioned in the Mehaberet, a famous Hindoo work in Sanscrit, under the name of Adjudiah. But whatever may have been its former magnificence, no traces of it are left. It is considered as a place of sanctity; and the Hindoos frequently come hither, on pilgrimage, from all parts of India.

Overysche, town of the kingdom of the Netherlands in Brabant, seated on the Ysche, 6 ms. NE. of Brussels, and 9 SW. of Louvain. Lon. $4^{\circ} 30'$ E. lat. $50^{\circ} 53'$ N.

Overysel, province of the kingdom of the Netherlands; bounded on the E. by the bishopric of Munster, on the N. by Friesland and Groningen, on the W. by the Yssel, and on the S. by the country of Zutphen and bishopric of Munster. It is divided into 3 districts, called Drente, Twent, and Salland. There are many morasses in this province, and but few inhabitants, in comparison with the rest. Its greatest riches consist in turf, which is dug up here, and sent to the neighbouring provinces, particularly Holland.

Ougien, town of Hindoostan Proper, in the province of Malwa, capital of one of the Western Mahratta chiefs. It is the Ujyuni, of the Sanscrit, and the Ozene of the Greeks, and is written Oojain, Ougein, and Ujein. The present

city stands on the Sipperah river, 350 ms. NE. from Bombay, and 452 SW. from Poonah. Ougien is one of the most ancient cities of India, perhaps of the world. The present city is built to the S. off the ruins of Ozene, and is about 6 ms. in circuit, very closely built and populous. The ground on which Ougien is built is in a peculiar manner friable, and being near the range of hills which separates the sources of the Jumna from those of the Neerbuddah, liable to submersion from the alluvion. That this has subjected the ancient city to destruction is evident. Southward from the modern city, in digging 15 or 20 feet, ruins of houses, domestic utensils, and ancient coins are found in abundance. The materials of the ancient are excavated for the purposes of building or repairing the modern city. Like all events which have transpired in remote antiquity, various causes, natural and supernatural, have been assigned to account for the catastrophe which overwhelmed this interesting city, but probability is in favor of alluvion, and adds one more to the many proofs that water is the great agent of change on the crust of this globe. Dr. Hunter, and other British writers, aver that the modern city is still liable to ruinous inundations.

With all its natural disadvantages, Ougien, however, from its situation is the entrepot of great inland trade. Its inhabitants import from Surat, various kinds of European and Chinese goods. Pearls and assafoetida, from Sindé, are brought here by the route of Marwar; and diamonds from Bundelcund, pass through this city to Surat. The public bazars are well supplied with grain, fruit, and other vegetables. The inhabitants are chiefly Mahometans. N. lat. $23^{\circ} 11'$ E. lon. $75^{\circ} 51'$.

Oviedo, town of Spain, capital of Asturia d'Oviedo, with a university. It is seated at the confluence of the Ore and Deva, which forms the Astra, 50 ms. NW. of Leon, and 208 of Madrid. Lon. $5^{\circ} 44'$ W. lat. $43^{\circ} 25'$ N.

Ouidton, or *Ouitanon*, village of Ind., on the Wabash, 130 ms. above Vincennes.

Ovid, pst. Seneca cty. N. Y., between Seneca, and Cayuga lakes. The principal village is near the former 22 ms. above Geneva. Pop. 1810, 4535, in 1820, 2654.

Ouisconsin, river of the U. S. in the NW. territory, rises at lat. 46° N. and between 12° and 13° W. from W. C., interlocking with the Menomonic of Green bay and with the southern rivers of Lake Superior. It thence flows S. to about lat. $43^{\circ} 45'$, where it approaches so very near Fox river of Green bay, as to leave only a portage of one mile and a half. See *Fox River of Michigan*. Below the portage the Ouisconsin, turns to SW. by W. and falls into Mississippi about 5 ms. below Prairie du Chien at lat. 43° N. This stream forms one of the great natural channels of communication between the St. Lawrence and Mississippi basins. Though generally rapid in its current, it is unimpeded by cataracts, or even dangerous shoals. The entire length by comparative courses 350 ms., nearly one half of which distance is below the portage.

Oula, town of Piedmont, seated in a valley, 12 ms. SW. of Sussa.

Oundle, town of Eng. in Northamptonshire, seated on the Nen, over which are 2 bridges, 26 ms. NE. of Northampton, and 78 N. by W. of London.

Ourfa, formerly Edessa, city of Asiatic Turkey, and capital of a Pachalik of the same name; situated partly on hills and partly on an intervening valley, about 30 ms. from the Euphrates, eastward from that stream. It is the seat of an extensive commerce and forms an entrepot between Aleppo, and the interior of Persia. Pop. 20,000, composed of a mixed mass of Turks, Armenians, Jews, Nestorians, and Arabs. Lat. 37° N. lon. $38^{\circ} 20'$ E.

Ourique, town of Portugal, in Alentejo, 26 ms. SW. of Beja.

Ouse, river of Eng. in Yorkshire, formed of the Ure and Swale, which rise near each other in the romantic tract called Richmondshire, and unite at Aldborough. It thence takes the name of Ouse, and flows through York, where it is navigable for considerable vessels; and afterwards receiving the Wharfe, Derwent, Aire, and Don, it meets the Trent on the borders of Lincolnshire, where their united streams form the Humber.

Ouse, river of Eng. in Sussex, formed of two branches, one of which rises in St. Leonard Forest, the other in the forest of Worth, and they unite above Lewes. It flows by that town to New Haven, below which it forms a considerable haven, and enters the English channel.

Ouse, Great, river of Eng. which rises in Northamptonshire, near Brackley, and flows to Buckingham, Stoney, Stratford, Newport Pagnel, Olney, and Bedford, where it is navigable. Thence it proceeds to St. Neot, Huntingdon, St. Ives, Ely, and Lynn, below which it enters the Lincolnshire wash.

Ouse, Little, river of Eng., which rises in the S. part of Norfolk, and dividing that city from Suffolk, as it flows westward, becomes navigable at Thetford; and afterwards joins the Great Ouse.

Ouse, or Grand River, stream of U. C., rising in the interior country, with sources interlocking with those of the Thames. It thence flows a little E. of S. into Lake Erie, which it enters about half way from Fort Erie, to the North Foreland. The bar at its mouth, has about seven feet water.

Owyhee, largest and most eastern of the Sandwich islands, in the Pacific Ocean. Its length from N. to S. is 84 ms., and its breadth 70. It is divided into six districts, two of which, on the NE. side, are separated by a mountain, that rises in three peaks, perpetually covered with snow, and may be seen at 40 leagues distance. To the N. of this mountain, the coast consists of high and abrupt cliffs, down which fall many beautiful cascades; and the whole country is covered with cocoa-nut, and bread-fruit trees. The peaks of this mountain on the NE. side, appear to be about half a mile high. To the S. of this mountain, the ground is covered with cinders, and in many places has black streaks, which seem to mark the course of a lava, that has flowed from the mountain to the shore. The southern promontory looks like the mere dregs of a volcano. The projecting headland is composed of broken and craggy rocks piled irregularly on one another, and terminating in sharp points; yet, amid these ruins, are many patches of rich soil, carefully laid out in plantations. The fields are enclosed by stone fences, and are interspersed with groves of cocoa-nut trees. Here captain Cook, in 1779, fell a victim to the sudden resentment of the natives, with whom he unfortunately had a dispute. Lon. 156° W. lat. $19^{\circ} 28'$ N.

Oxbow, post. Jefferson city. N. Y., by post. 181 ms. NW. from Albany.

Oxford, city. of Eng., and capital of Oxfordshire. It is seated at the conflux of the Cherwell with the Thames, and has a canal to Brunston, in Northamptonshire. The city, with the suburbs, is of a circular form, 3 ms. in circumference, and was anciently surrounded by walls, of which considerable remains are yet to be seen; as also of its extensive castle, the tower of which now serves for a country jail. In 1811, the number of inhabitants was 12,931. It has, beside the cathedral, 13 parish-churches, a famous university, a noble market place, and a magnificent bridge. The university is generally supposed to have been a seminary for

learning before the time of Alfred, although it owed its revival and consequence to liberal patronage. Here are 20 colleges, and 5 halls, several of which stand in the streets, and give the city an air of magnificence. The colleges are provided with sufficient revenues for the maintenance of a master, fellow, and students. In the halls the students live, either wholly, or in part at their own expense. The colleges are, University, Baliol, Merton, Exeter, Oriel, Queen's, New, Lincoln, All Souls, Magdalen, Brazen Nose, Corpus Christi, Christ Church, Trinity, St. John Baptist's, Jesus, Wadham, Pembroke, Worcester, and Hertford. Of these the most ancient is University College, founded before the year 872; and to Christ Church College, begun by cardinal Wolsey, and finished by Henry VIII. belongs the cathedral. The halls are, Alban, Edmund, St. Mary's, New Inn, and St. Mary Magdalene. Among the libraries in the University, the most distinguished is the Bodleian, founded by Sir Thomas Bodley; those of All Souls College, Christ Church, Queen's, New, St John's, Exeter, and Corpus Christi. Among other public buildings are the Ashmolean Museum, the Clarendon Printing-house, Radcliff Infirmary, and an Observatory. Magdalen Bridge, besides the beauty of its architecture, has this singularity that more than half of it is on dry ground, and the rest covers two small strips of the Cherwell; this bridge is 526 feet long. The Theatre is more magnificent than any thing of the kind in the world. The Physic-garden of above 5 acres, is walled round, with fine gates, one of which cost 600*l*.

Oxford, *cty.* Eng., bounded on the E. by Buckinghamshire, W. by Gloucestershire, S. by Berkshire, and N. by Warwickshire and Northamptonshire. The extreme length is 48 ms., and breadth 26, but its form is very irregular. It contains 450,000 acres; is divided into 14 hundreds, and 207 parishes, has one city and 12 market towns; and sends 9 members to Parliament. The soil, though various, is fertile in corn and grass. The S. part, especially on the borders of Buckinghamshire, is hilly and woody, having a continuation of the Chiltern Hills running through it. The NW. part is also elevated and stony. The middle is, in general, a rich country, watered by numerous streams running from N. to S., and terminating in the Thames. Of these, the most considerable are the Windrush, Evenlode, Cherwell, and Thames; the latter, although an inconsiderable rivulet has obtained some importance, from having been supposed to give name to the Thames. The products of Oxfordshire, are chiefly those common to the midland farming cities. Its hills yield ochre, pipe clay, and other earths, useful for various purposes. Corn and malt are conveyed from it, by the Thames, to the metropolis. Pop. 1801, 109,620, in 1811, 119,191, and in 1821, 134,327.

Pachsu, small island in the Mediterranean, near the coast of Epirus, S. of Corfu, and W. of the Gulf of Arta.

Pacific Ocean, that vast ocean which separates Asia from America. It received the term Pacific, from the moderate weather the first mariners who sailed in it met with between the tropics; and it was called South Sea, because the Spaniards crossed the isthmus of Darien from N. to S., when they first discovered it; though it is properly the Western Ocean, with regard to America. The Pacific as an adjective name, applies only with correctness to the tropical section of the great expanse of water between America, and Asia, and Austral Asia. In high latitudes, either N. or S., storms and variable winds prevail over the Pacific. See article *Earth*. The preceding character of the Pacific Ocean is, therefore, correct when applied to different parts of that immense basin. Within and for some distance above the tropics, it is truly Pacific, whilst in high latitudes, and particularly near the land, it is liable to all the meteorological changes arising from difference of temperature.

Palermo, fortified city of Sicily, in Val di Maara, capital of the island, and an archbishop's see. It stands on a bay of the same name, on the N. coast, near the extremity of a kind of natural amphitheatre, formed by high and rocky mountains. The country between the city and the mountains is one of the richest plains in the world: the whole appearing a magnificent garden, filled with fruitful trees, and watered by fountains and rivulets. The inhabitants of Palermo, are estimated at 130,000. Two great streets intersect each other in the centre of the city, where they form a handsome square, called the Ottangolo, from the centre of which is seen the whole of these noble streets, and the four elegant gates which terminate them, each at the distance of half a mile. The Porto Felice, opens to the Marino, a delightful walk, which has on one side the wall of the city, and on the other the sea; and in the centre is an elegant kind of temple, frequently made use of as an orchestra. The churches of Palermo are upwards of 300, and many of them very rich and magnificent. This city has suffered greatly at different periods, by earthquakes or inundations. The harbour, defended by two castles, is dangerously open to the sea from the NE; and, even at the anchoring place, ships are in danger when a westerly wind rushes through the valley of Colli, between the mountains. It stands in a pleasant fruitful country, on the NE. end of the island, and at the bottom of a gulf of the same name. Lon. $13^{\circ} 23' E.$ lat. $38^{\circ} 15' N.$

Palestine, part of Turkey in Asia, so called from the Philistines, who inhabited its sea coasts; it is called also Judæa; from the patriarch Judah, and the Holy Land; from its having been the residence and scene of our Saviour's passion, and in Scripture Canaan, and the Promised Land. It is bounded by Mount Libanus, which divides it from Syria on the N., by Mount Hermon, which separates it from Arabia Deserta on the E., by the mountains of Seir and the deserts of Arabia Petraea on the S., and by the Mediterranean on the W. It is in general a fruitful country, abounding in corn, wine and oil, where cultivated, and might sup-

ply the neighbouring countries with all these, as it anciently did, were its present inhabitants equally industrious. The parts about Jerusalem, its once famous capital, are the most mountainous and rocky, but they feed numerous herds and flocks, and yield plenty of honey, excellent wine and oil; and the valleys large crops of corn.

Palestine is formed by a ridge of limestone hills, or low mountains, extending nearly N. and S., and two slopes; one towards the Mediterranean, and the other declining towards the river Jordan and Dead Sea. Like all limestone regions, its aspect when uncultivated is more desolate, and the soil in appearance more sterile than it is in fact.

Panama, or *Darien*, *Isthmus of*. No very definite idea has been conveyed by the term Isthmus of *Darien*, or *Panama*. The narrow strip of land between the Gulf of *Panama* of the Pacific and the Caribbean sea, an arm of the Atlantic, presents the nearest approach of the waters of those vast oceans; but, with very unequal width, extending from SE. to NW. upwards of 1500 ms., the immense Isthmus affords several points where the distance from the Atlantic to the Pacific is evidently within the scope of canal enterprise, without any very onerous expense. This will be more clearly understood from the following geographical view.

If we extend the great American Isthmus, on the E. to the mouth of the Atrato river, and on the W. to the Gulf of Tehuantepec and rivers Chimalapa and Guasacualco, it reaches from 1° E. to 18° W. from W. C. The bottom of the Gulf of *Darien* and mouth of the Atrato is in N. lat. $8^{\circ} 30'$, the Gulf of Tehuantepec in N. lat. $16^{\circ} 20'$, and the mouth of the Guasacualco river in N. lat. $17^{\circ} 30'$.

Within these geographical limits spread two vast peninsulas, containing together more than 350,000 sqms., and discharging, into the Gulf of Mexico and Caribbean sea, numerous rivers, many of which are of considerable magnitude, and length of course.

It may be premised, that in the present, as in almost every other instance, the geography of the mountains is most defective. In all our maps of N. America, the great central chain of Anahuac, in Mexico, is extended to the SE., and connected with the chains of the Andes in S. America. I have been, for upwards of 20 years, of opinion that this arrangement was radically wrong, and almost the reverse of fact. One very general law of construction seems to prevail in the mountain systems of America; the chains extend in lateral ridges in one general direction. This I have already shown is strikingly apparent in the Appalachian system. As far as we possess correct information, the same regularity of structure prevails in the great chains W. of the basin of the Miss.; and in those of the Brasils, and Andes of S. America. In all these chains their range seems uninfluenced by the contiguous oceans or rivers. If my hypotheses respecting the mountains of Guatemala be correct, their range is nearly NW. and SE., leaving deep intervening valleys. Also, that similar to other American mountains, those of Guatemala are of very unequal elevation, admitting passages, not very elevated, from ocean to ocean.

Another very important element in the in-

vestigation of this subject, is that of the respective levels of the Atlantic and Pacific oceans. The trade winds and current of rotation, it is well known, produce that immense whirlpool in the Atlantic Ocean, to a part of which, opposite the SE. coast of N. America, has been given the name of Gulf Stream. Between S. America and Africa, and within the tropics, the surface of the Atlantic ocean flows regularly westward, separated by Cape St. Rocque, S. lat. 5° , this vast ocean current is divided: the N. section, inclined to the NW. by the coast of S. America, is carried into the Caribbean sea. Again urged forward in the same direction by the general range of the Isthmus, the accumulated flood pours into the Gulf of Mexico between Yucatan and Cuba, and again escapes into the Atlantic between Cuba and Florida.

Water in an ocean flows from a similar cause as in a river, that is, difference of level. The Gulf Stream continues with considerable velocity more than 1500 ms. To admit water to flow with perceptible velocity, demands a difference of level or descent of at least half an inch per mile. With this very moderate allowance, the surface of the Gulf of Mexico is above 60 feet more elevated than that of the Atlantic ocean. The very same causes which, in accumulating water on the SE. coast of N. America, forms the Gulf Stream, forces the water from the opposing coast and contributes very much to augment the inequality of level in the surfaces of the Atlantic and Pacific oceans. The retreat of water from the SW. American coast, within the tropics, is, no doubt, the principal cause of the very few deep harbours existing along that part of the Pacific ocean.

Commencing our survey at the Gulf of Tehuantepec, and advancing SE., we first meet with the Chimalapa, a mountain torrent flowing from the N. about 70 ms. into the Gulf of Tehuantepec. This insignificant stream rises in the mountains of Oaxaca, heading with the sources of the Guasacualco. The latter is also a mere mountain torrent, not above 100 ms. in entire length. The direct distance from the Gulf of Mexico, at the mouth of the Guasacualco, to the Pacific, at the entrance of the Chimalapa into the Gulf of Tehuantepec, is about 100 ms.

From the great elevation of the intervening mountains, it is not probable that a canal communication by this route is practicable. The limit between Mexico and Guatemala, intersects the Pacific ocean 50 ms. SW. from the mouth of the Chimalapa. The province of Guatemala is a long narrow strip, skirting the Pacific upwards of 500 ms., and, at a mean distance of about 50 ms. inland, bounded by a lofty mountain chain. SE. from this central chain, Guatemala is bounded NE. by Chiapa and SE. by Yesapaz. Chiapa is drained by 3 rivers, flowing northward into the Gulf of Mexico; the Tobasco, the St. Pedro, and Sumasinta.

By the name of Grijalva, the Tobasco rises in the mountains of Guatemala, within less than 50 ms. from the Pacific ocean. Assuming a NE. course, continues that direction 160 ms., approaches the Intendancy of Vera Cruz in Mexico, but, before entering that province, winds to the E. 50 ms., enters Tobasco, and, turning

to SE. about 120 ms., falls into the Gulf of Mexico. The San Pedro is, in some measure, a tributary stream of the Tobasco, both entering the same estuary W. from W. C. 15°. How far the Tobasco is navigable, or the existing impediments to the construction of canals, has never been ascertained; but, from the elevation of the mountains of Guatemala, we may entertain reasonable doubts, whether any water communication between the two great oceans is practicable by the Tobasco.

The Gulf of Mexico is terminated at the bottom of the Bay of Campeachy, by a sheet of water, very appropriately named "*Gulf of Terminos*." The Sumasinta river, flowing from the mountains of Guatemala, in the extreme southern angle of Chiapa, pursues a N. course of 200 ms. into the Gulf of Terminos. The small river Suchitepec has its source in the opposite side of the mountains from those of the Sumasinta. How well the stream of the Sumasinta is calculated for navigation is yet to be ascertained; from the position of its channel, a very direct route from the Atlantic to the Pacific is presented, but it is to be apprehended, that here again the intervening mountains oppose an insuperable barrier. By the valleys of the Suchitepec and Sumasinta, the direct distance from ocean to ocean is within a trifle of 250 ms. This is the third route noticed by Humboldt in his Political Essay on New Spain, under the head of general considerations on the possibility of uniting the S. Sea and Atlantic ocean. This illustrious traveller, to the regret of the whole civilized world, did not examine, personally, any part of the Isthmus of N. America, but, from such information as he possessed, doubts the practicability of a canal in this region.

The Sumasinta is the last stream of Guatemala which carries its waters into the Gulf of Mexico; but the same elevated tract from which this river draws its sources, gives origin to two other Atlantic rivers of considerable magnitude, the Balize Main and Acasabastlan. The Balize flows NE., upwards of 300 ms. over Yucatan, and is discharged by 2 mouths into the Bay of Honduras; the Acasabastlan or Guatemala flows about 200 ms. nearly due E. into the Gulf of Amatique, the extreme western angle of the Bay of Honduras.

That immense bay, bounded on the W. by the eastern shore of Yucatan, and S. by the northern shore of the peninsula of Honduras, is that part of the Caribbean sea spreading between the continent of N. America and the islands of Cuba and Jamaica. The name of "*Bay of Honduras*" is, however, more particularly applied to that great triangle bounded by Yucatan, Peninsula of Honduras, and a line drawn from Cape Gracioso à Dios to Cape Catoche. Gradually contracted by the continent, this bay terminates in the Gulf of Amatique. The latter opens again inland into the Gulf of Dulce. The Acasabastlan river is discharged into the latter, within 100 ms. from the port of Acazulta or Trinidad, of the Pacific.

The Amatique gulf is the estuary of several rivers beside the Acasabastlan. One, the Guanasco, rises in the SE. part of Guatemala, and curving ENE., and finally N., enters the SE. angle of the Amatique, after a course of 250

ms. If the quantity of water corresponds to their length of course, the rivers of Amatique offer one of the most direct routes between the Atlantic and Pacific oceans. The sources of the Acasabastlan are within less than 50 ms. NE. from the city of Guatemala. The depth of water in the harbours of either coast is, however, defectively known, and the intermediate country but partially explored.

SE. from the Acasabastlan, the isthmus rapidly widens into the immense peninsula containing the provinces of Honduras, Nicaragua, and Costa Rica. The mouth of the Acasabastlan, into the Gulf of Dulce, is at N. lat. 15°, and at 12° W. lon. from W. C.; Cape Gracioso à Dios is at N. lat. 15°, and at 4° W. lon. from W. C. Between these 2 geographical points the peninsula of Honduras extends upwards of 500 ms. from W. to E. In form of a triangle, this part of America presents a port of 600 ms. to the Pacific ocean, 500 to the Caribbean Sea, and 500 to the Bay of Honduras. Connected on the NW. to Vera Paz and Guatemala, by a neck of land less than 100 ms. wide, and on the SE. to Veragua by another of not more than 50 from ocean to ocean, this interesting region contains a superficies of more than 100,000 sqms. A narrow slip along the Pacific is well peopled, but the interior in great part unexplored.

Leaving Guatemala, the mountains incline to the eastward, and leave, in the NW. part of Nicaragua, a wider slope to the rivers flowing into the Pacific than exists in the former provinces. The slope towards the Atlantic is, however, as usual, comparatively much more extensive than that towards the Pacific; the former giving source and course to numerous rivers, 2 of which, Gold river and Bluefield's river, exceed 400 ms. in length. Though but imperfectly known, we may safely exclude either of those rivers from a list of those offering a convenient connexion between the waters of the Atlantic and Pacific oceans, and proceed to examine, perhaps, the most remarkable feature in American geography, and particularly so in the present inquiry.

The valley formed by the lakes of Leon and Nicaragua, and by the river St. Juan, or St. John, is to the eye, when surveying a map of that part of America, the most natural route offered to human industry to unite the 2 great American oceans. It is the 4th route from ocean to ocean indicated by Humboldt. This author observes, that "Perhaps the communication of the lake of Nicaragua with the Pacific ocean could be carried on by the lake of Leon, by means of the river Tasta, which, on the road from Leon to Realejo, descends from the volcano of Telico. In fact, the ground there appears very little elevated. The account of the voyage of Dampier leads us even to suppose that there exists no chain of mountains between the lake of Nicaragua and the S. Sea. '*The coast of Nicoya*,' says this great navigator, 'is low, and covered at full tide. To arrive at Leon, from Realejo, we must go 20 ms. across a country flat and covered with mangle trees.' The city of Leon itself is situated on a savanna. There is a small river which, passing near Realejo, might facilitate the communication between the latter port and that of Leon. From the W. bank of the

lake of Nicaragua, there are only 4 marine leagues (12 ms.) to the bottom of the Gulf of Popagayos, and 7 (21 ms.) to that of Nicoya, which navigators call La Caldera. Dampier says expressly, that the ground between La Caldera and the lake is a little hilly, but for the greatest part level, and like a savanna."

"The coast of Nicaragua is almost inaccessible in the months of Aug., Sept., and Oct., on account of terrible storms and rains; and in Jan. and Feb., on account of the furious NE and ENE winds, called Popagayos. This circumstance is exceedingly inconvenient for navigation."—*Political Essay*, vol. i. p. 20.

Panari, one of the Lipari islands, in the Mediterranean, between Lipari and Stromboli. It is a barren inconsiderable island, and only 5 ms. in circumference. Lon. $15^{\circ} 41'$ E. lat. $38^{\circ} 38'$ N.

Paray, one of the Philippine islands, between those of Paragoa and Negro. It is 250 ms. in circumference, and the most populous and fertile of them all. It is watered by a great number of rivers and brooks, and produces a great quantity of rice. Iloila is the capital.

Paneras, St., vil. of Eng., in Middlesex, a little to the NW. of London. At a public house near the church is a medicinal spring. Here is an hospital for inoculation, and the Veterinary College, established in 1791, under the patronage of people of the first rank and fortune, for the improvement of farriery and the treatment of cattle in general.

Panga, town of Africa, in the kingdom of Congo, capital of the province of Bamba. Lon. $14^{\circ} 25'$ E. lat. $6^{\circ} 30'$ S.

Panglang, town of Pegu, in the Birman empire, situated on the river Rangoon. Lon. $17^{\circ} 4'$ E. lat. $93^{\circ} 54'$ S.

Paniput, town of Hindoostan, in Delhi. Lon. $76^{\circ} 80'$ E. lat. $29^{\circ} 23'$ N., 72 ms. NW. from Delhi.

Panjab, country of Hindoostan Proper, being that watered by the 5 eastern branches of the Indus. It was the scene of Alexander's last campaign, and the *ne plus ultra* of his conquests. It forms a square of 250 ms., and includes the whole of Lahore, and a great part of Moultan Proper. To the lower part of Moultan it is flat and marshy, and inundated by the periodical rains which fall between May and Oct.

Pannanach Wells, vil. of Stld., in Aberdeenshire, noted for the mineral waters discovered in 1756; and a lodge has been erected for the accommodation of the company that frequent them in summer.

Panniput, town of Hindoostan Proper, situated on an extensive plain between the cities of Delhi and Sirhind, 72 ms. NW. of Delhi. Lon. $76^{\circ} 45'$ E. lat. $29^{\circ} 15'$ N.

Panomi, vil. of Turkey, in the province of Macedonia, 16 ms. S. of Salonichi. Lon. $23^{\circ} 10'$ E. lat. $40^{\circ} 25'$ N.

Panormo, small town of Turkey, in Europe, in Albania, on a gulf of the Mediterranean, opposite the island of Corfu, 45 ms. SSE. of Valona. Lon. $20^{\circ} 2'$ E. lat. 40° N.

Pantularia, island in the Mediterranean, between Sicily and the coast of Tunis, about 17 ms. in circumference. It abounds in cotton,

fruits, wine, and corn, and is subject to the king of Naples. Lon. $12^{\circ} 31'$ E. lat. $36^{\circ} 55'$ N. *Panther creek*, psto. Serry cty. N. C. 143 ms. NW. by W. from Raleigh.

Pauku, town of Turkey, in Natolia, on the NE. coast of the sea of Marmora, 12 ms. SE. of Constantinople.

Panton, pstv. Addison cty. Ver., between Otter river and Lake Champlain, 10 ms. NW. from Middlebury.

Panuco, river of Mexico, rises near San Louig Potosi, and flowing E., over the state of San Louis Potosi, falls into the Moctezuma.

Panuco, city of Mexico, in the state of Vera Cruz, on the river Panuco, near the Gulf of Mexico, and 170 ms. N. by E. of the city of Mexico. Lon. W. C. $21^{\circ} 30'$ W. lat. $23^{\circ} 13'$ N.

Pauli, pstv. and seat of justice, Orange cty. Ind., 106 ms. SSW. from Indianopolis. It is situated on Salt creek, branch of Little White river. Lat. $38^{\circ} 34'$ N. lon. W. C. $9^{\circ} 22'$ W.

Pa-som, one of the New Hebrides, in the S. Pacific Ocean, to the S. of Malicollo. Lon. $168^{\circ} 28'$ W. lat. $16^{\circ} 30'$ S.

Pao-ting-fou, town of China, in the province of Pe-tcheli, where the viceroy resides, and the most considerable city in the province, next to Peking. It has 20 others under its jurisdiction; 3 of the 2d, and 17 of the 3d class. The country around it is pleasant, and inferior in fertility to no part of China.

Papa, small but strong town of Lower Hungary, in the cty. of Esperin. It was taken from the Turks in 1683, after the raising of the siege of Vienna. It is seated on a mountain, near the river Marchaltz, 45 ms. W. of Buda. Lon. $18^{\circ} 20'$ E. lat. $47^{\circ} 26'$ N.

Papagayo, gulf of, on the Pacific coast of North America, and between Costa Rica, and Nicaragua. Lon. W. C. $8^{\circ} 30'$ W. lat. $11^{\circ} 10'$ N. The distance from the eastern extremity of Papagayo gulf to lake Nicaragua, is only about 22 ms.

Papantla, town of Mexico, in the state of Puebla, about 130 ms. NE. from the city of Mexico. Lon. W. C. $20^{\circ} 40'$ W. lat. $20^{\circ} 30'$ N.

This place is very remarkable for the magnitude and extent of antiquities found within its vicinity. See *Pyramids of America*.

Papasquiaro, village of Mexico, in the SW. part of the state of Durango. Lat. $24^{\circ} 58'$ N. lon. W. C. $27^{\circ} 40'$ W., about 70 ms. NW. by W. from Durango.

Paperville, pstv. Sullivan cty. Ten., by pstrd. 278 ms. NE. by E. from Murfreesborough.

Papout, St., late episcopal town of France, in the department of Aude, and late province of Languedoc, seated on the Lembe, 8 ms. E. of Castlenaudary, and 35 E. of Toulouse. Lon. $2^{\circ} 10'$ E. lat. $43^{\circ} 21'$ N.

Pappenheim, town of Germany, in the circle of Franconia, capital of a cty. of the same name, with a castle, where the count resides. It is seated near the Altmal, 17 ms. NW. of Neuburg, and 32 S. of Nuremberg. Lon. $10^{\circ} 51'$ E. lat. $48^{\circ} 58'$ N.

Para, river, or rather strait, separating the island of Joannes from the continent of South America. It extends from the mouth of the Amazon, to that of Tocantinas.

Papua, or *New Guinea*, island of Oceania, or Austral Asia, lying to the N. of New Holland, from which it is separated by Torres' straits. Papua is but imperfectly known, but as delineated generally, extends from 130° to 150° E. lon., and from the equator to 10° S. lat. This geographical extent presents an island of very great magnitude, stretching 1400 ms. from E. to W., with a mean width of at least 200 ms. In actual area, if compact, Papua must far exceed Borneo, but the former is too little known to admit a comparative estimate. See *New Guinea*.

Para, Gran, one of the Captain-generalships of the Brasils; bounded N. by the Amazon river, NE. by the Atlantic ocean, SE. by Maranham and Goias, S. by Mattagrosso, SW. by Peru, and NW. by Colombia. It is an immense country, extending from E. to W. 1600 ms., with a mean width of about 400, and an area of 640,000 sqms. Lying between the equator and lat 12° S. It is perhaps that extent of the whole habitable world, which in a continuous body presents the greatest facility of inland navigation. Washed, for nearly 200 ms. by the Amazon, and traversed by innumerable other streams of great magnitude, the principal of which are, Jutay Madeira, Tapajoz, Xingu, and Tocantinas. Chief town, Gran Para.

Para, Gran, city of Brasil, and capital of the Captain generalship of Gran Para, situated on the Tocantinas, 60 ms. above its mouth. Lon. W. C. $28^{\circ} 27'$ E. lat. $1^{\circ} 30'$ S. Pop. about 10,000.

Paradise, pstv. Lancaster cy. Penn.

Paradise, pstv. York cy. Penn., 15 ms. SSW. from York. Pop. 1820, 1837.

Paracels, vast number of small islands and rocks, lying in the China Sea, and forming a long cluster, near 400 ms. in length, off the coast of Cochin China.

Paradelly, town of Portugal, in the province of Beira. Lon $7^{\circ} 23'$ W. lat. $41^{\circ} 4'$ N.

Paragmithi. See *Parga*.

Paraguaná, peninsula of Colombia, in Venezuela, containing the city of Baro. It forms the eastern side of the entrance into the Gulf of Maracaibo, and is terminated by a cape of the same name. Lat $11^{\circ} 52'$ N.

Parago, or *Pulawan*, large island in the Indian Ocean, between the Philippine and Borneo, which has a king, tributary to Borneo. The Spaniards have a fort here.

Paragua, the most westerly of the Philippine islands, extending about 180 ms. in length, and 20 in breadth. Lon. $117^{\circ} 44'$ E. lat. 10° N.

Paramatta, town of New Holland, in the British colony of Botany Bay.

Paraguay river, large branch of Orinoco, rises in the mountains of Guiana, its source interlocking with those of Essequibo, the Rio Branco, branch of Rio Negro, and those of the Orinoco. The entire course of the Paraguay is about 300 ms. from S. to N. It falls into the Orinoco about 80 ms. below St. Tomé and Angostura.

Paraguay, large country of South America; bounded on the N. by Amazonia, on the E. by Brasil, on the S. by Patagonia, and on the W. by Chili and Peru. It contains 6 provinces; namely, Paraguay Proper, Parana, Guaria, Uruguay, Tucuman, and La Plata, from which the whole country is also called La Plata. It has

numerous lakes and rivers; of the latter, the three principal are the Paraguay, Uruguay, and Parana; the united streams of which form the celebrated Rio-de-la-Plata. These rivers annually overflow their banks, and, on their recess, leave them enriched by a slime, that renders the soil extremely fertile. This vast country is far from being wholly subdued or planted by the Spaniards, many parts being still unknown. The principal province of which we have any knowledge is that called *La Plata*, towards the mouth of the Rio-de-la-Plata. This province, with all the adjacent parts, is one continued plain for several hundred ms., extremely fertile, and producing cotton in great abundance, tobacco, and the valuable herb called 'Paraguay,' which is peculiar to this country, and the infusion of which is drank in all the Spanish provinces of South America, instead of tea. They have also a variety of fruits, and very rich pastures, but the country is destitute of woods. The air is remarkably sweet and serene. The Spaniards discovered this country, by sailing up the Rio-de-la-Plata, in 1515, and founded the town of Buenos Ayres. In 1580, the Jesuits were admitted into these fertile regions, and in the next century, founded the famous missions of Paraguay, which were a number of colonies, each governed by two Jesuits, one of whom was rector, and the other his curate. They had long resisted the Spaniards and Portuguese; but the Jesuits by learning their language, conforming to their manners, &c., soon acquired great authority among them, till at last, by steadily pursuing the same artful measures, they arrived at the highest degree of power and influence, being in a manner the absolute sovereigns of a great part of this extensive country; for above 350,000 families are said to have been subject to them, living in obedience and awe bordering on adoration, yet produced without the least violence or constraint. In 1767, the court expelled the Jesuits, and the natives were put upon the same footing with the other Indians of the Spanish part of South America.

Paraguay, river of South America, the great northern branch of the Rio de la Plata, rises by very numerous sources, at S. 13° , in the captain generalship of Mattagrosso of Brasil. Flowing thence by a general course nearly due S., about 1000 ms., it receives from the NW., the large volume of the Pilcomayo, and 150 ms. still lower, the now noble stream is again augmented by the Rio Grande, also from the NW. The already vast volume of the Paraguay, continues its southern course 50 ms. below the mouth of the Rio Grande, to where it encounters and mingles its waves with an almost equal rival, the Parana, from the NE. The name of the united waters below their junction, is given to the inferior branch, the Parana. See *Parana*.

Paramaribo, the capital of Surinam, in Guiana, and the chief place of the Dutch colonies in South America. It has a strong citadel, and a noble road for shipping. Exports, sugar, cotton, and indigo. The streets are perfectly straight, and lined with orange, standing, marind, and lemon trees, in everlasting bloom. It is situated on the E. side of the river Suri-

nam, 16 ms. from its mouth. Lon. $53^{\circ} 25' W$. lat. $3^{\circ} 48' N$.

Parana, river of South America, the main branch of the Rio de la Plata, rises in the mountains of St. Paul, Minas Geraes, and Goyas of Brasil. It is very remarkable, that the south-eastern sources of the Parana, are within 50 ms. from the Atlantic Ocean, and flow NW. towards the centre of the continent, and pursue that direction 500 ms., where they unite, and abruptly turn to SSW. The latter course is maintained 700 ms. to where the Parana approaches to within less than 50 ms. from the Uruguay; but again by an abrupt bend to the W. leaves the Uruguay, and after continuing W. 100 ms., mingles with the Paraguay, at the city of Assumption. Here, as is the case with the Missouri, and Mississippi, the name of the largest, is superceded by that of the smaller stream, and the Parana prevails over its superior rival, the Paraguay. Below Assumption, the Parana inclines a little W. of S. 450 ms. receiving in that distance from the NW. the Salado, and from the W., the Tercero al Rosario. Turning to the SE. below Rosario, the Parana flows 150 ms., and receiving its last great tributary, the Uruguay, from the NNE., is lost in the general name of Rio de la Plata. The Parana is the most extensive secondary river of the Earth, draining more surface than does the Missouri.

Parana, province of Paraguay, so called from a large river, which uniting with the Paraguay, and afterward with the Uruguay, forms the Rio de la Plata.

Paranaiba, north eastern confluent of the Parana river, South America. The Paranaiba rises about S. lat. 16° , heading with the Tocantinas, and flowing SW. by comparative courses 400 ms. falls into the Parana.

Paranatinga, river of S. America, rises in the Brazilian province of Matta Grosso, S. lat. 15° , and flowing thence a little E. of N., between the Tocantinas and Tapajos, joins the Amazon, at S. lat. $1^{\circ} 30'$, after a comparative course of 1000 ms.

Parachin, town of Lower Saxony, in the dutchy of Mecklenburg, seated on a small river which falls into the Elbe. It is 20 ms. SE. of Schwerin. Lon. $12^{\circ} E$. lat. $53^{\circ} 34' N$.

Paramousie, one of the Kurile Islands, lying S. of that of Shoonska. See *Kuriles*.

Parchwitz, town of Germany in Silesia, in the principality of Lignitz, subject to the king of Prussia. It has a considerable manufacture of cloth. It is 12 ms. W. of Wohlau, and 10 NE. of Lignitz. Lon. $16^{\circ} 42' E$. lat. $51^{\circ} 17' N$.

Pardiba, town of S. America, in Brasil, at the mouth of a river of the same name. The soil is pretty fertile, and produces sugar canes, and a great number of trees of Brasil wood. Lon. $49^{\circ} 53' W$. lat. $6^{\circ} 50' S$.

Pardubitz, town of Bohemia, in the circle of Chradim, subject to the house of Austria, with a manufacture of knives and sword blades. It is a fortified town and is 55 ms. E. of Prague. Lon. $16^{\circ} 12' E$. lat. $49^{\circ} 55' N$.

Parma, town of Italy, in Piedmont, in the city of Avez, 20 ms. N. of Turin.

Parma, strong town of Istria, with a good

harbour, on the Gulf of Venice, 65 ms. E. of Venice. Lon. $13^{\circ} 56' E$. lat. $45^{\circ} 24' N$.

Parga, town of European Turkey, in Albania, on the S. side of the Gulf of Glykyssemon, or, "Port of Sweet Waters." Surrounded by groves of olive, orange, and lemon trees. It spreads along the southern corner of the gulf, at N. lat. $39^{\circ} 30'$, E. lon. $20^{\circ} 30'$, 15 ms. NW. from Prevesa, and opposite the northern extremity of the island of Corfu. It is the capital of the district called Paramithi; pop. about 8000. The inhabitants are chiefly christians, who are, according to Hobhouse, the very worst of the Albanians. This town was given up, in 1819, by the British to Ali Pacha, and to avoid their certain fate from such a monster, abandoned by the citizens. They deserved their character, if they deserved their fate.

Paria, or *New Andalusia*, province of Terra Firma, on the banks of the Orinoco, near its mouth.

Paria, Gulf of, in S. America, between the province of Cumana, the island of Trinidad, and the estuary of the Orinoco. It is about 75 ms. long, and 45 wide, with a depth of from 8 to 30 fathoms, with good anchorage over its entire extent.

Paria, Cape, eastern extremity of the province of Cumana. Lon. W. C. $15^{\circ} E$. lat. $9^{\circ} 12' N$.

Parilla, or *St. Parilla*, town of Peru, in the audience of Lima, seated at the mouth of the river Santa, 30 ms. SE. of Truxilla, and 230 NW. of Lima. Lon. $77^{\circ} 50' W$. lat. $8^{\circ} 36' S$.

Parima, or *Branco*, river of S. America, a branch of the Rio Negro, rises in the mountains of Guiana, its sources interlocking with those of Essequibo, and Paraguay of Orinoco. It flows nearly S., and enters the Rio Negro.

Parima Cochac, province of Peru, lying N. from Arequipa.

Paripa, lake of S. America, near the borders of Amazonia and Guiana, of a square form, 80 ms. long, and 40 broad. It seems to be a kind of inundation formed by the Orinoco; for that river enters on the N., and issues on the W. side of the lake, near its NW. angle. From the SE. of this lake, issues the White river, called also the Parima, which flows S. to the Rio Negro. To the W. of this lake, before the main stream of the Orinoco turns to the N., there are two other branches that flow from it to the Black river. Hence there are three communications between those two great rivers, the Orinoco and the Amazon. This description is accordant with Spanish authorities, but doubts of the existence of Lake Parima, are not yet dissipated.

Paris, capital of France, one of the largest, finest, and most populous cities in Europe. The river Seine, which crosses it forms two small islands, called Isle du Palais, and Isle Notre Dame; the first is the ancient city of Paris, and had its name from a building which was formerly the residence of the kings and afterwards resigned to the parliament. Paris has 16 gates, and is 15 ms. in circumference including the suburbs. That part of it which is called the ville is situate to the N., the university to the S., and the city in the centre.—The streets are narrow, and generally without good

accommodations for foot passengers. The houses are built of freestone, many of them 3 stories high, and often contain a different family on every floor. The number of inhabitants, by a late official statement, is 715,000. There are 9 principal bridges in Paris, but only 3 of them occupy the whole breadth of the Seine. There are a great number of public fountains, and some triumphal arches. Of the squares, the finest is the Place de Louis Quinze, of an octagon form, in which was an equestrian statue, in bronze, of that monarch. Besides the cathedral of Notre Dame one of the largest in Europe, and which contains 15 chapels, Paris has many fine churches. The abbey of St. Genevieve, was founded by king Clovis, whose monument is still to be seen in the church; it has a library of 24,000 printed books, and 2000 manuscripts, also a valuable cabinet of antiquities and natural curiosities. The new church of St. Genevieve (now called the Pantheon) was destined by the national assembly, in 1791, to receive the remains of such great men as had merited well their country. The university, founded by Charles the Fat, consists of 4 faculties; namely, divinity, civil, and canon law, physic, and the sciences; its head is the rector, who is always chosen from the faculty of the sciences. The finest college in Paris is that of the Four Nations, called also Mazarin, from the cardinal, its founder. Among the public libraries, that called the Royal, holds the first rank in respect both to the extent of the buildings, and the number of volumes. The royal observatory is built of freestone, and neither iron nor wood has been employed in the erection. The botanical garden is worthy of its appellation, of royal. The four principal palaces are the Louvre, the Tuilleries, the Palais Royal, and the Luxembourg. In the Louvre is deposited the finest collection of paintings and statues in the world; the principal of them lately brought from various parts of Italy.—The garden of the Tuilleries, in front of the palace and on the banks of the Seine, is the finest public walk in Paris. The Luxembourg is famous for its gallery, in which are 20 exquisite paintings by Rubens. The Hospital general, which also goes by the name of la Salpêtrerie (salt petre being formerly made here) is a most noble foundation for the female sex; near 7000 of whom are here provided for, and live under the inspection of 60 sisters. To this incomparable foundation belongs the castle of Bicêtre, defended on all sides by a wall, of considerable circuit, which contains within it many large buildings and several open places; and here near 4000 persons of the other sex are maintained. The Hospital de la Pitié, where poor children are brought up constitutes also a part of the Hospital-general. These three foundations, with the Hotel Dieu, have one common fund, amounting to full two millions of livres a year. The Hotel des Invalides, for the wounded and superannuated soldiery, built by Louis XVI. is a magnificent structure; as is the military school in the Champ de Mars, founded by Louis XV. The two principal theatres are the Theatre de la Nation and the Italian theatre; which, in point of elegance and convenience, are worthy the capital of a great nation. The Monoi, or

mint, is also a noble building, situate on that side of the Seine, opposite the Louvre. The Samaritan is a beautiful edifice at the end of the bridge leading to the Louvre, and contains an engine for conveying the water of the Seine to all parts of the villa. The Hotel de Ville is an ancient structure; this tribunal stands in the Place de Greve, where all public rejoicings are celebrated, and common malefactors executed. The most interesting of the manufactures of Paris is plate-glass, and tapestries made after the pictures of the greatest masters. The basin of Paris as it is denominated by Geologists is in great part composed of gypsum and freestone. Paris now forms, with a small district round it, one of the departments of France. Parys, mountain of Eng., in the isle of Anglesey, famous for a copper mine, probably the largest bed of ore of that metal hitherto discovered in the world. "It is not wrought (says Dr. Aikin) in the common manner of subterraneous mines, but, like a stone quarry, open to day; and the quantities of ore raised are prodigious. The ore is poor in quality, and very abundant in sulphur. The purest part is exported raw to the smelting works at Swansea and other places, the more impure is first calcined and deprived of most of its sulphur on the spot. Quantities of nearly pure copper are obtained from the waters lodged beneath the bed of ore, by the intervention of iron. A lead ore, rich in silver, is also found in this mountain. The wealth and pop. of Anglesey have received a great increase from the discovery of this copper mine.

Pascagoula, river of Miss., about N. lat. $32^{\circ} 40'$, and flowing nearly S. falls into the Sound between Horn Island and the main shore at N. lat. $30^{\circ} 20'$, consequently this stream flows through $2^{\circ} 20'$ of lat. or upwards of 130 ms. A bar at the mouth prevents the entrance of vessels drawing more than 5 feet water, but any vessel which can enter, can go as high as the mouth of Leaf river. The name of Pascagoula is more correctly applied to the united streams of Leaf and Chickasaw bay, which see. The barren pine forests out of which flow the Chickasaw bay and Leaf river, are continued down the Pascagoula to the mouth, and reach on both sides of the bay to the very margin of the Sound.

SE. from Messalonghi, on the opposite shore of the Gulf, or strait of Lepanto. The town is situated on the declivity of the mountain Vodi. The higher part is a mile and a half from the port, and in that quarter are all the best houses, surrounded, as usual, with Gardens. "Nothing, certainly," says Hobhouse, "can be more pleasant than the immediate vicinity of the town, which is one blooming garden of orange and lemon plantations, of olive-groves, vine-yards, and currant grounds. The fruit trees and the vine clothe the sides of the hill behind the town, to a considerable height: the currants are on the flats below, and run along the line of coast, to the S., as far as the eye can reach. Both on the plain and on the sides of the hills, there is a great quantity of the small shrub called Glykorrizzo by the Greeks, and which is our Liquorice.

Pennsylvania. This name is derived from the surname of William Penn, and Sylvan, woods; and means, literally, Penn's woods. Though at the epoch when the name was imposed, the real features of the country it was in future to designate, were in great part unknown to those who were its authors, no term could be more appropriate. If, in any, regions of equal extent, and in one continuous body, ever bore, in a state of nature, a more dense forest. Pennsylvania was an expanse of woods, in the strictest acceptance of the word.

As now limited, Pennsylvania extends from N. Lat. $39^{\circ} 43'$ to N. Lat. $42^{\circ} 16'$; and from 2° E. to $3^{\circ} 36'$ W. from W. C.

The greatest length of Pennsylvania, is due W., from Bristol on the Delaware river, to the eastern border of Ohio cty., Virg., through 356' of lon., along N. lat. 40° 9'. This distance, on that line of lat., is equal to 315 American stat. m.

The greatest breadth 176 ms., from the Virg. line to the extreme northern angle on Lake Erie.

General breadth, 188 ms.

The area of Pennsylvania has been variously stated, but probably never accurately determined. In both Morse's and Worster's Gazetteers, the superficies is given at 46,000 sqms. Other authorities vary, but I find from comparing the best maps, and from calculating the rhumbs, and parts, occupied by the state, that Pennsylvania includes above 47,000 sqms. Rejecting the fractional excess, and using that curve superficies, the state will contain thirty million and eighty thousand statute acres.

The following general view of the mountains and river systems of Penn., is apparently more in detail than compatible with the general brevity of this treatise, but I have chosen the central position of Penn. in order to give a connected perspective of the geographical structure of that part of the U. S. through which a line of canal communication from Chesapeake bay to the Ohio valley is intended to be traced.

The mountains of Penn., obtrude themselves at the first glance on a map, as the most prominent of its natural features. No even tolerably good survey having ever been made of the mountains of this region, and many important chains having been entirely omitted, a lucid classification is attended with great difficulty. Some of the collateral chains hitherto overlooked, I have supplied from personal observation, but no doubt much remains to be added or rectified, by future research.

The structure and position of its mountains, has given to Penn. an aspect peculiar to itself. The Appalachian system in the U. S., generally extends in a direction deviating not very essentially from SW. to NE.; but in Penn., the whole system is inflected from that course, and passes the state in a serpentine direction. Towards the S. boundary, the mountains lie about NNE., gradually inclining more eastwardly as they penetrate northwards; and in the central counties, many of the chains lie nearly E. and W.; but as they extend towards the northern border of the state, they again imperceptibly incline to the NE. and enter N. Y. and N. J. in nearly that direction.

The influence of the mountains in modifying the general features, is very obvious, far beyond, where any chains or ridges are sufficiently elevated to be classed as parts of the Appalachian

system. It will be, however, shown in the progress of this review, that the mountain system is very much too greatly restricted, not alone in Penn., but also in Md., Virg., N. Y., and N. J.

Without attending to minor claims, the mountains of Penn., advancing from the SE. to NW. are as follows:

Though omitted in most maps, a chain enters the S. boundary of York cty., and cut by the Susquehannah river, rises in, and traverses Lancaster cty. between Pequea and Octorara creeks, and between the sources of the Conestoga and Brandywine, separates for a short distance Lancaster and Chester cities. Continuing between Berks and Chester, it is interrupted by the Schuylkill above Pottstown. Rising again, and stretching NE., forms first the boundary between Montgomery and Berks; thence between Lehigh and Bucks, and separating Northampton from Bucks, reaches the Delaware. Pursuing a NE. course through N. J., separating Sussex from Huntingdon, Morris, and Berken cities, enters N. Y. between the sources of the Wallkill and Passaic rivers; and extending, in broken ridges, through the SE. part of Orange cty., forms the Highlands near West Point.

The almost uniform neglect of professed geographers respecting this strongly marked feature, attests the infancy of the science in the U. S. After having formed the celebrated masses on both sides of the Hudson between Newburg and West Point, the ridge continues NE., separating Putnam from Dutchess county. Inflecting to the N., and forming the separating ridge between the waters of the Hudson and Housatonic rivers, stretches through the eastern part of Dutchess, Columbia, and Rensselaer cities. Along the two latter, however, the ridge under review, forms, in reality, the separating boundary between N. Y. and Mass.; and entering the SW. angle of Ver., continues through that state, by the name of Green mountains, into L. C. Thus prominent and continuous, from the Susquehannah to the NE., this part of the Appalachian system is equally so through Md., Virg., and N. C. Passing over Harford, Baltimore, Anne Arundel, and Montgomery cities, in Md., it forms falls in the Potomac 12 ms. above Georgetown, and extends into Virg. in Fairfax cty. Varying in distance from 20 to 30 ms. the Great Kittatinny or Blue Ridge, and the ridge we have been tracing, traverses Virg. into N. C. Leaving Virg. in Henry, and entering N. C. in Stokes cty.; with its farther range I am unacquainted, but have no doubt but that it is distinctly continued over the Carolinas and Geo. into Al. Though the structure of the Atlantic slope, decidedly advances a conformity to the Appalachian system, far below the SE. mountain, it is the terminating continuous ridge towards the Atlantic Ocean.

NW. from, and nearly parallel to, the South Mountain, another very remarkable ridge traverses N. J. and Penn., and similar to the former, the latter is unknown in either of these states, by any general name. Its continuation in N. Y. is designated by the Shawangunk. Between the Susquehannah and Potomac, it is termed relatively, the South mountain; and in

Virg. and the Carolinas, it forms the Blue ridge; and entering the NW. part of Geo., is gradually lost amongst the sources of Chatahoche river.

To preserve perspicuity, I have adopted, or rather extended the name Blue Ridge, into Penn. and N. J. This very remarkable chain of the Appalachian system enters Penn., on its southern line, and stretching N. between Adams and Franklin cties., reaches the southern angle of Cumberland, where it turns to NE., and extending towards the Susquehannah, separates Cumberland from Adams and York cties. About 6 ms. below Harrisburg, the Blue Ridge, is pierced or broken by the Susquehannah, and again rising below the mouth of Swatara, crosses the southern angle of Dauphin; thence known as the Conewago hills, separates Lebanon from Lancaster cties. enters Berks, and reaches the Schuylkill at Reading. Continuing through Berks, Lehigh, and Northampton cties., the Blue Ridge passes Allentown, Bethlehem, and Easton, is again interrupted by the Delaware, below the latter town. Extending through Sussex cties., the Blue Ridge enters N. Y., and is finally terminated in the Shawangunk, on the W. side of Hudson river, and amongst the branches of the Walkill.

In one respect, the Southeast Mountain and Blue Ridge, in Penn. and N. J., differ from other sections of the Appalachian system. The two chains we have noticed, are formed of links more detached, than are those more remote from the Atlantic Ocean; but, otherwise in respect to component matter, range, and vegetation, are in every place well marked sections of the general system. The very unequal elevation of their various parts, may perhaps, be also adduced, as a characteristic of the Southeast Mountain and Blue Ridge. The former does not, it is probable, in any part of Penn. or N. J., rise to 1000 feet above the level of the Atlantic Ocean, whilst in N. Y., at the Highlands, some of the peaks, particularly Butterhill, exceeds 1500 feet elevation above tide water; and in Massachusetts and Vermont, towers to near 3000 feet. If taken generally, the Blue Ridge, in Penn. and N. J., is more elevated than the Southeast Mountain, yet no particular part of the former rises to an equal elevation with the Highlands, on either bank of the Hudson.

In Md., the Blue ridge assumes a very distinctive aspect, and separating Frederick and Washington cties., is broken by the Potomac at Harper's ferry, below the mouth of Shenandoah. This fine chain crosses, and adorns Virg., and N. and S. Carolina. In one remarkable circumstance, the Blue Ridge stands alone amongst the Mountain chains of the U. S. From the Susquehannah, to the NW. angle of S. C., in a distance of upwards of 500 ms., it every where forms a cty. demarcation.

The third, and in some respects the most remarkable chain of Penn., is the Kittatinny. Known by divers local names, the Kittatinny, in a survey advancing from SW. to NE., first lies distinctively in Franklin cties., and like other chains in the southern margin of Penn., ranges a little E. of N.; but inflecting more to the NE., extends to the Susquehannah, separating Cumberland and Perry cties. Five ms. above Har-

risburg, the Kittatinny is interrupted by the Susquehannah. Broken also, by the Swatara, the Schuylkill, the Lehigh, and Delaware, the Kittatinny enters N. J., through which it passes into N. Y., and forms, by its continuation, the Catsbergs. The general aspect of the Kittatinny is much more continuous than any other mountain chain of Penn. It is, however, very far from being uniform in elevation, varying from 800, to perhaps 1500 feet above tide water.

NW. from the Kittatinny, though more elevated, the chains are much less distinctly defined. Between the Kittatinny Mountain, and the N. branch of Susquehannah river, the intermediate country is in a great part composed of high rugged mountains, and narrow, deep, and precipitous valleys. This is the most steril and least improvable part of Penn.; but it is the region producing the most extensive masses of Anthracite coal, known on the globe.

The confusion in the natural arrangement of the Anthracite section of Penn., is more apparent than real. The Kittatinny Mountain and Susquehannah river, lie nearly parallel upwards of 70 ms., distant from each other about 35 ms. The intervening space is filled by lateral chains, rising in many places, far above any part of the Kittatinny. Amongst these chains, two are worthy of particular notice, and serve, pre-eminently to elucidate the very peculiar topography of interior Penn.

Bedford and Franklin cties. are separated by a chain, there known, as Cove Mountain. With a change of name, to Tuscarora Mountain, the latter chain separates Franklin from Huntingdon, and Perry from Mifflin, and reaches the Susquehannah nearly opposite the southern extremity of Northumberland cties. Rising again below the Mahantango river, and broken into vast links, the chain divides into nearly equal parts, the space between the Kittatinny Mountains, and the main branch of Susquehannah river. Broad Mountain passed on the road, from Easton and Bethlehem to Berwick, is one the great links of this central chain. With its extension NE., towards the Delaware, I am unacquainted.

More accurate surveys would, it is more than probable, identify, Sideling Hill, of Bedford cties., Jack's Mountain, of Huntingdon and Mifflin, and the central chains of Union, Columbia and Luzerne cties. The chain which rises on both banks of the Susquehannah, in Luzerne, is amongst the most interesting features, not only in the U. S., but the world. The very peculiar structure of this valley will be noticed more appropriately, when treating of the rivers of that part of Penn. In the present instance, it is the mountains we have before us, and to which our attention is directed. Below Sunbury, a chain commences, or if my supposition is correct, is continued up the Susquehannah, along its left shore; this chain is crossed by the river above Danville, and again above Catawissa. From the latter place, the chain stretches to the NE., through Columbia, enters Luzerne by the name of Nescopeck Mountain, and mingles ultimately with other chains, and is terminated towards the southern angle of Wayne cties. Nearly parallel to the Nescopeck

and with a comparatively narrow intervening valley, another chain leaves the Susquehannah, above the borough of Northumberland, and traversing Northumberland and Columbia cities, enters Luzerne, and is broken by the Susquehannah 16 ms. below Wilkesbarre. Skirting the left bank about 8 ms., it is again crossed by the river, and continuing its course NE., passes about 2½ ms. from and opposite Wilkesbarre. Preserving its course NE., it is for the third and last time, crossed by the Susquehannah, above the mouth of Lackawannock creek, 10 ms. above Wilkesbarre, and stretching towards the Delaware, is lost in Wayne city. Beyond the main branch of Susquehannah, to the NW., the chains lie nearly parallel to those SE. from that river. The structure of the country, on both sides of the Susquehannah nearly the same. The yet discovered mines of Anthracite coal, advancing from SE. to NW., cease, in the chain immediately opposite Wilkesbarre.

To the eye, the region included between the W. branch of Susquehannah and the Potomac bears a strong analogy to that between the W. and N. branches of Susquehannah, but a minute scrutiny exposes a great change advancing SW. towards the borders of Md. Soil and vegetation both differ materially. The beech, hemlock, and sugar-maple forests are succeeded, in the valleys, by oak, hickory, and elm. Thus far, the entire drain of Penn. is into the Atlantic Ocean. The chain called the Alleghany forms, in the southern parts of Penn., the dividing ridge between the Atlantic slope and the valley of Ohio.

Alleghany mountain has, no doubt from this circumstance, received its pre-eminence among the mountain chains of Penn., Md., and Virg. Only about 60 ms. of its range in the former state, however, does separate the sources of the streams of the two great natural sections, the Atlantic slope and Ohio valley. The Alleghany chain leaving Alleghany city, Md., separates Bedford and Somerset cities, and extending in a northerly direction, also separates the NW. part of Bedford from the SE. part of Cambria city. At the extreme northern angle of Bedford, the Alleghany turns to NE. and is thence drained on both sides by the tributary streams of the Susquehannah. Discharging the waters of the W. branch to the NW., and those of the Juniata and Bald Eagle rivers to the SE., the Alleghany reaches the W. branch of Susquehannah at the mouth of Bald Eagle river.

Here, once more, the defects of our maps are strikingly apparent. Lycoming city is delineated as if no mountain chains traversed its surface. This is not the fact, though too little is known of that part of Penn., to admit a classification of its mountains. If I were to hazard a conjecture, I should make the chain which crosses the Susquehannah in Bradford city, near and below Towanda, the continuation of the Alleghany. It may be remarked, that it is only in a few places E. of, and those immediately in its spurs, that bituminous coal has been hitherto discovered in Penn. on the Atlantic slope; whilst this mineral abounds NW. from the Alleghany chain. This locality of the bituminous coal prevails across the whole state, and is found from near Towanda, in Penn., into Md.

How far, and to what extent, the bituminous coal formation spreads into Virg., I am unable to determine. The Alleghany chain may, in the existing state of our mineralogical knowledge, be viewed as the limit between the two species of coal in Penn.

Whatever may be the elevation of its summit, the base of the Alleghany chain, between Bedford, and Somerset, and Cambria cities, constitutes the height of land between the Ohio and Atlantic tides; and forms also a similar demarcation in Md. This circumstance is entitled to our serious notice, from this region being the intended route of the Chesapeake and Ohio canal. The summit level, or Cumberland road, as given by Mr. Schriver, is 2825 feet.

As a mountain chain, the Alleghany yields in grandeur of scenery, and in elevation above its base, to not only the Broad mountain, but to many other chains of the Appalachian system.

Chesnut Ridge is the next chain W. of the Alleghany; the two chains extending nearly parallel, and about 20 ms. asunder. Though comparatively humble in respect to elevation, Chesnut Ridge is one of the most extended chains of the system to which it appertains; reaching by various local names over Virg. into Tenn., and most probably into Al. As placed on our maps, Chesnut Ridge enters Penn. at the NW. angle of Md., and ranging a little E. of N., forms the boundary between Union and Somerset; thence between Westmoreland and Somerset, and finally between the NE. angle of Westmoreland and the SW. of Cambria city. At the extreme NE. angle of Westmoreland, the Chesnut Ridge reaches the Kiskiminitas river, and, as delineated, its termination. So far, however, from being so in nature, this chain preserves its identity through the state farther N. than any other chain of the Appalachian system.

Laurel Hill is the last chain of the system in Penn. What has been already observed respecting the comparatively depressed chains nearest the Atlantic Ocean, may be repeated respecting the Chesnut Ridge and the Laurel Hill; that, though not very elevated, they nevertheless exist as well defined mountain chains. The latter is a very extended branch of the system, reaching from the northern part of Penn. into Al. This chain traverses Virg. by various names; separates Virg. from Kent., as Cumberland mountain; traverses Tenn., and penetrates Al. under the latter term; and interrupted by Tennessee river, it forms the Muscle Shoals, and is imperceptibly merged into the central hills of Al. Like many others, this very lengthened chain is delineated defectively, in every map of Penn. I have seen. Similar to Chesnut Ridge, Laurel Hill is terminated on our maps, near the Kiskiminitas, though in reality extending to near the S. boundary of N. York.

In addition to the great chains we have been surveying, many of minor importance might be noted; but we have deemed a view of the most striking parts sufficient.

If engrossed into one view, the mountains of Penn. exhibit many very interesting points of observation. The Appalachian system is here

upwards of 150 ms. wide, whilst the particular chains do not average more than 3 ms., if so much, in breadth.

Before proceeding farther in our review, I may be permitted to observe, that mountains are considered as the superlative of hills. In not only Penn., but in the Appalachian system generally, hills and mountains are not only specifically, but generically distinct features of nature. If this was not the case, the slope would, in most cases, gradually rise from the mouths to the sources of rivers, and no regular ranges of elevated ground could be found crossing the streams obliquely. According to common opinion, the mountains of the U. States form the dividing ridge between the waters of the Atlantic slope, and those of the Mississippi and St. Lawrence basins. So far, however, are the mountains from constituting the separating line of the waters, that the real dividing ridge, if it can be so called, crosses the mountains diagonally.

The Appalachian system is formed, as we have seen, by a number of collateral chains, lying nearly parallel; each chain is again formed by ridges, which interlocking, or interrupted by rivers, extend generally in a similar direction with the chain to which they particularly appertain. The chains differ materially, form each other in elevation and in continuity. In some of the chains, at each side of the system, the parts are of very unequal height above their bases, and of tide water. The South-east mountain and Blue Ridge, are prominent examples.

In the correct solution of any question arising out of the advance or distribution of population, the determination of the real surface covered with mountains, would afford extremely satisfactory element. As far as my own personal observation, and the present state of our geographical knowledge afford data, I have estimated the extent of mountain base in Penn.; and on the best maps, carefully measuring every chain, the entire length produced, amounts to a small excess above 2250 ms. If the latter sum is, however, taken, and 3 ms. allowed for the mean breadth of the chains, the mountain area will be 6750 sqs. or very nearly one-seventh part of the superficies of the state.

Before examining the formations, the component soils and rocks, we proceed to view the river valleys of Penn. The state is drained by the Delaware, Susquehanna, Ohio, Potomac, and Genesee rivers, and at the extreme N.W. angle by lake Erie.

The respective river basins, or rather the sections included in Penn., are of very unequal extent. Delaware, Susquehanna, and Ohio, include an immense proportion of the whole state, and subdivide it naturally into the eastern, middle, and western river sections.

The following tables give the respective area of each, and also the smaller sections of Potomac, Genesee, and Erie.

Without reference to the comparatively minor river sections of Potomac, Genessee and Erie, the surface of Penn. is subdivided into three river valleys, Delaware, Susquehannah and Ohio.

The range of the rivers of Penn. is one of the most interesting subjects in all physical geography. It may be assumed as a general principle, that the mountain streams particularly, either flow NE. or SW., along the mountain valleys, or directly at right angles to that course, through the mountain chains. The conformity of the river courses to that of the mountains, is in a striking manner obvious in the Delaware and Susquehannah.

The Delaware rises by two branches in the western spurs of the Catsbergs. The Cookquago to the NW., and the Popachton to the SE., flow from their sources SW. about 50 ms., draining Delaware city. N. Y. Reaching within about 5 ms. from the NE. angle of Penn., the Cookquago turns to SE., and continuing that course 5 or 6 ms., receives the Popachton. The united streams maintain a SE. course, 50 ms., to the mouth of the Nevisink, and northern extremity of N. J. The Delaware here touches, and washes the NW. foot of the Kittatinny chain, along which it turns to the SW., 35 ms., to the mouth of Broadhead's creek, from Pike and Northampton cities. Winding to the S., the Delaware, below the entrance of Broadhead's creek, breaks through the Kittatinny, and enters the fine valley between that chain and the Blue Ridge. At the NW. base of the latter, at Easton, the river again forms a mountain pass, and 5 ms. further down, another through the South-east mountain. At the SE. base of the latter chain, this river once more assumes a SE. course after having meandered through the Kittatinny valley about 30 ms.

At Trenton, 35 ms. below the South-east mountain, the Delaware passes the primitive ledge, and meets the tide; and 5 ms. below, near Bristol and Bordentown, again turns to

SW. Passing along or near the primitive rock, this now widening stream continues about 40 ms., receiving near Philadelphia, the Schuylkill from the NW. Forming its last great bend, 5 or 6 ms. below Newcastle, the bay of Delaware opens into the Atlantic Ocean in a SE. direction.

The entire length of the Delaware is, by comparative courses, from the Catsbergs to the Atlantic Ocean, 110 ms., not quite one half being tide water. Though rolling over numerous rapids, no cataracts, in the proper meaning of the term, interrupt the navigation of the Delaware, which at times of moderately high water, reach, by both constituent branches, into N. Y. The general course is, with a trifling deviation, to the W., S., and N.; the sources of the Cookquago and Popachton, being very nearly in similar longitude with Cape May. When viewed on a map, the various sections of this river have the appearance of having been arranged artificially: the two lower bends strongly proving the geological influence of the mountain system. Though but little elevated above the ordinary surface of the country through which it passes, the great primitive ledge pursues a direction remarkably similar to that of the Appalachian chains. From Bristol to its terminating bend below Newcastle, the Delaware river flows down the SE. margin of the primitive, separating the sandy shores of N. J. from the micaceous soil of Penn. and Del.

Like every other primary stream of the Atlantic slope, the navigation of the Delaware is less free than in the early stage of settlement, but admits vessels of considerable draught to the foot of its lowest rapid; and ships of the largest class to near the mouth of the Schuylkill.

Similar to the Susquehannah and the Potomac, the Delaware receives nearly all its large tributary streams from the NW. Of these confluent only two, the Lehigh and Schuylkill, are of considerable magnitude.

From the position of their valleys as channels of intercommunication, and from the mineral treasures found along their mountain sources, the Schuylkill and Lehigh have already become of great importance. The Lehigh rises by various mountain branches in Northampton, Pike, Wayne, and Luzerne cities; uniting below Stoddardsville, and forming a small but precipitous river current, which pouring first to the SW., gradually turns S. and SE., passes Mauchchunk village, and winding between mountain masses, finally breaks through Kittatinny, and continuing to the SE. meets the NW. base of the Blue Ridge at Allentown. Here it turns to the NE. along the base of the latter chain, and passing Bethlehem joins the Delaware at Easton. The Lehigh is truly a mountain torrent; there is no other stream of equal length in the U. S. which presents so great a difference of level between the points of source and discharge.

In a comparative course, it is about 25 ms. from Stoddardsville to Mauchchunk, and the fall in the intermediate distance 845 feet. Ten ms. in a direct line below Mauchchunk, the Lehigh passes the Kittatinny, and falls 245 feet in that short space. From the Lehigh Water Gap, or passage through the Kittatinny, to its junction with the Delaware, it falls 205 feet, in a comparative course of 35 ms. The entire

fall from Stoddartsville to Easton, 1210 feet; comparative course 70 ms. From the junction of its constituent branches below Stoddartsville to its extreme source, about 15 or 20 ms., giving an entire comparative length to the Lehigh, of near 100 ms. The fall above Stoddartsville, probably amounts to 500 feet; and if so, this rapid river falls upwards of 1700 feet in 100 ms.; and what may be considered in a peculiar manner remarkable, no actual cataract worthy notice, exists in all its course. Above the Water Gap, the bed of the Lehigh lies at the base of steep or precipitous mountains, rising in most places from the margin of the stream. The scenery is in a peculiar manner wild, bold, picturesque, and romantic. Below the Kittatinny, the features of nature are less grand along the banks, but still follow, in a rich succession of strongly contrasted and elegant landscape. The varied character of its shores is preserved to its final egress into its recipient at Easton, and at all future time this river will afford an ample reward to the traveller.

The Lehigh is now rendered navigable by dams and falling locks for some distance above Mauch Chunk. This very useful and arduous work has been effected by the Lehigh Coal and Navigation Company, under the direction of Messrs. White and Hazard, the superintending engineers. The discovery of anthracite coal, made in the vicinity, led to the improvement of the river navigation. In reference to the maps, it will be seen, that the coal strata between the Lehigh and Schuylkill are in the transition or inclined region of rocks. It may be observed that rivers flowing over transition rocks, are, in most instances, very much impeded by rapids, but very seldom have perpendicular falls. Real cataracts almost uniformly exist in secondary formation.

The Schuylkill rises in and drains about the five-eighths of Schuylkill city. Formed by two branches, which unite immediately above and pass through the Kittatinny mountain 7 ms. SE. from Orwicksburg. Below the Water Gap, or passage through the Kittatinny, the Schuylkill turns to nearly S., in which direction it continues through the Blue Ridge at Reading, after having received Maiden creek from the NE., and the Tulpehocken above that town, from the NW. Below the Blue Ridge this river again winds to SE., passes the South-east mountain above Pottstown, and receiving the Perkiomen and some lesser creeks from the N., crosses the primitive ledge above, and joins the Delaware below Philadelphia.

The entire length of the Schuylkill, by comparative courses, is about 100 ms., 20 above and 80 below the Kittatinny mountains.

A strong resemblance is perceivable between the Schuylkill and the Lehigh, though the scenery around the former is less rugged than that which skirts the latter stream. Flowing from the same mountain valley, the soil and mineral productions are in a great measure similar on the two rivers. I may here observe, that in the distribution of the Anthracite coal, very great diversity exists between the situation of the mass on the Mauch Chunk mountain, and any other with which I have been made acquainted, in either the basins of Delaware or

Susquehannah. That on the Mauch Chunk lies in an immense body on the ridge of the mountain, with little if any inclination to the horizon, and with a very thin stratum of incumbent earth. The mines on the Schuylkill, and those near Wilkesbarre, dip like the other accompanying incumbent and decumbent strata.

The Schuylkill is now navigable by canals and locks to the coal mines, 10 ms. above Orwicksburg. The Union Canal Company is employed also in completing a connection between the Susquehannah and Schuylkill, by the Swatara and Tulpehocken valleys.

The Susquehannah, in many other respects remarkable, is peculiarly so as rising off the central secondary formation, and piercing the mountains obliquely and reaching the Atlantic tides, after having passed all the intermediate formations. This immense stream enters Penn. by two great branches, the Susquehannah proper, and the Chemung or Tioga. I have often had occasion to observe, that every river had its own individual physiognomy. This observation applies, in a very striking manner, to the Susquehannah. The general bends of the latter stream conform, in an astonishing degree, to those of the Delaware; and a comparative view on a map must convince every mind that some general structure of the country through which they flow, must have modified and directed the respective courses of those two rivers. Below their junction at Tioga Point, the united streams of the Susquehannah and Chemung flow a little S. of E., 15 ms. to the foot of the Appalachian system, below Towanda. Leaving the secondary, and entering on the transition, the now considerable stream turns to SE., and following that general course 50 ms., breaks through several chains, and finally at the mouth of the Lackawannock, 9 ms. above Wilkesbarre, enters the Wyoming valley, and turns to SW.; continuing the latter course near 70 ms. down the mountain valleys to Northumberland and Sunbury, and to the mouth of the West branch. In the entire distance from Tioga Point to Sunbury, the Susquehannah receives no tributary stream of 40 ms. direct length; the Towanda, Wyalusing, Tunkhannock, Lackawannock, Fishing creek, and some lesser branches, are mere mountain creeks, rapid, but not more than from 25 to 35 ms. general course.

Including all its higher NE. branches, the Susquehannah is peculiar in the structure of its valleys. Wide bottoms of two, and sometimes three stages, spread along the convex side of the bends, whilst mountains of more or less elevation, rise on both sides of these spreading vales. Exuberant fertility is, at a single step, followed by rocky and sterile steeps. The natural timber of the bottoms is in a great measure different from that on the mountains. In the former sugar maple, black walnut, elm, beech, and other trees indicative of a productive soil abound; on the slopes of the mountains, pine, oak, and chesnut, and above the Lawahannock, hemlock, are the prevalent timber trees. As a navigable stream, the Susquehannah is much less interrupted by rapids or dangerous shoals, than from the tortuous course it pursues through an extensive mountain sys-

tem could be expected. It is also remarkable, that where the various branches of this river pass the respective chains, rapids seldom, and perpendicular falls, no where, exist.

The Western branch is, in all its extent, a river of Pennsylvania. Rising far within the secondary formation, its extreme western source in Indiana, reaches within less than 35 ms. from the Alleghany river, at Kittanning. Flowing NE. about 70 ms. across Clearfield, it receives the Sinnamahoning from the NW., in the SW. angle of Lycoming cty. Below its junction with the Sinnamahoning, the W. branch continues NE. 15 ms., and thence to SE. 20 ms., to the mouth of Bald Eagle creek from Centre cty. Below Bald Eagle, the course is a little N. of E., 35 ms., to Pennsborough, receiving in the intermediate distance, from the N., Pine creek, Lycoming, and Loyalsock. From Pennsborough the course is nearly S., 25 ms., to the mouth of the NE. branch, and 35 from thence to that of the Juniata. It may be observed that this long southern reach of the Susquehanna has its counterpart in the Delaware. About 8 ms. below the entrance of Juniata, the Susquehanna, having again assumed a southeastern course, passes the Kittatinny mountains; and 10 ms. below that chain, the Blue Ridge. Maintaining the latter course, 60 ms. below the Blue Ridge, this great river is lost in the tides of Chesapeake Bay.

Juniata, the SW. branch of Susquehanna, rises in and drains the northern part of Bedford cty. The sources of the Juniata are in the eastern slopes of the Alleghany chain; and flowing 20 ms. nearly E., passes Bedford, and breaking through several mountain chains, turns abruptly to a course a little E. of N. 40 ms., receives the Frankstown branch below and near the borough of Huntingdon, in Huntingdon cty. The general course of Frankstown branch is from the NW. to SE., and below their junction, the united streams follow that course 15 ms., breaking through Jack's Mountain. Again inflected to NE., the Juniata leaves Huntingdon and enters Millin cty., and pursuing that direction near 30 ms., passes Lewistown, and again winding to SE., breaks through Shade Mountain into Tuscarora valley. Crossing that valley, in a course of 10 ms., reaches the NW. base of Tuscarora Mountain, down which it flows about 10 ms., where, near Millerstown, it pursues the latter mountain, and once more turning to SE., enters on Perry cty., over which it flows 15 ms., where it finally mingles with the Susquehanna.

Like every other branch of the Susquehanna, the Juniata is as remarkable for its rapids, as for its exemption from perpendicular falls. Though originating in, and having its entire course amongst craggy mountains, it is navigable at high water, to near Bedford. In speculative opinions on the means, and most suitable route, to form a water communication between the Chesapeake basin and the valley of Ohio; the Juniata has been conspicuously held in view. In such investigations, relative height above the ocean is a most important element. The close of this article will show the general difference of level, between the sources and mouths of the Pennsylvania rivers, as far as

they have been ascertained with any adequate precision.

The Potomac, though drawing but a very trivial part of its waters from Pennsylvania, demands attention in this sketch, from the probability that its channel may be chosen by the general Government, as a canal route between the Atlantic slope, and Ohio valley. The Potomac is a real mountain river, deriving its sources from nearly the highest table land of the Appalachian system. The extreme western fountain of the N. branch of Potomac, is in the SE. slopes of the Alleghany or Backbone chain, N. lat. $39^{\circ} 10'$. Flowing NE. along the foot of Alleghany to the mouth of Savage creek, or rather river, 35 ms., the Potomac turns to SE. through Will's Mountain into Cumberland valley, which it crosses about 10 ms., where it is again turned to NE. by another lateral chain. Continuing NE. 25 ms., reaches the town of Cumberland. At the latter place occurs another abrupt bend, through a mountain pass, into the South Branch valley. The latter stream is of much greater magnitude than that of the Potomac proper. Rising by numerous creeks in Pendleton cty. Virg., as far S. as N. lat. $38^{\circ} 20'$. In a general comparative course of 100 ms., the S. branch becomes a fine navigable river. Below the mouth of the S. branch, the Potomac gradually resumes a NE. direction, which it preserves about 30 ms. to Hancock's town, where it turns to SE., and pierces the Blue Ridge chain, and in a few ms. lower flows the Kittatinny, entering the Great Conococheague valley. From Hancock's town to the entrance of Conococheague creek, the course of the Potomac is a little S. of E. 25 ms. Below the latter creek, the river inclines to SE. by S., 25 ms., to the NW. base of the Blue Ridge, and mouth of the Shenandoah.

Rising in, and draining Augusta cty., Virg., the S. branch of Shenandoah rises below N. lat. 38° . Augmented by innumerable mountain streams, it flows from Augusta, over Rockingham and Shenandoah, into Frederick cty., where, joined by the N. branch, and continuing a general course of NE., over Frederick and Jefferson cties., unites with the Potomac at Harper's ferry, after a comparative course of about 150 ms. At their junction, the volume of the Shenandoah yields very little in magnitude to that of the Potomac. The united waters immediately break through the Blue Ridge, and continuing SE., about 50 ms., mingles with the Chesapeake tides at Georgetown, within the U. C. The general comparative course of the Potomac, above tide water, is, by the S. branch, about 200, by the Potomac proper 150, and by the Shenandoah 160 ms.

Like those of the Delaware and Susquehanna, the great confluent of the Potomac are from the right bank. Savage river and Will's creek from Alleghany, Conococheague from Washington, and Monocacy from Frederick cty. Md., are comparatively trivial when compared with the branches of Potomac derived from Virg.

At Cumberland, Potomac reaches within 5, and at Hancock's town, within 2 ms. of the S. boundary of Penn. The extent of the Potomac, valley included, in that state, is given in the table.

Leaving the Atlantic slope, and viewing a general map of the U. S., we at once perceive a great river valley, stretching from Pocahontas, *cty.* Virg., over western Penn., into N. Y. This valley extends nearly due N. and S., at an angle of about 45° , to the range of the Appalachian mountains, and reaches from N. lat. $38^{\circ} 30'$ to N. lat. $42^{\circ} 20'$. The extremes giving source to 2 rivers; that of the N. to the Alleghany, and that of the S. to the Monongahela. These 2 streams, flowing directly towards each other, meet at Pittsburgh, very nearly at the middle point of the valley. Their united water, taking the name of Ohio, turns to the W., or rather NW., as far as the entrance of Big Beaver river. With a very partial exception, western Penn. is drained by the Alleghany and Monongahela.

Though the lower part of its course is but little inclined W. of S., the general bend of the Alleghany conform, in a very striking manner, to the structure of the Delaware, Susquehanna, and Potomac, and gives another conclusive proof of the extension of the Appalachian system far beyond where it protrudes elevated mountain chains. Having its source in Potter *cty.* Penn., and interlocking with the head branches of the Susquehanna and Genesee, the Alleghany flows NW. about 50 ms., into Catauga *cty.* N. Y. Abruptly turning to SW., and preserving that general course nearly 100 ms., and receiving French creek from the NW., it thence bends to SE. 40 ms., to the mouth of the Mahoning. About the middle of the latter course, Clarion river and Red Bank creek, 2 large branches, enter from the NE. From Mahoning to Pittsburgh, the general course is again SW. about 50 ms.

Kiskiminitas, a very considerable accessory stream of the Alleghany river, rises in the mountain valley between the Alleghany and Chesnut Ridge chains, and flowing NW. breaks through Chesnut Ridge and Laurel Hill, and, after a comparative course of 75 ms., unites with the Alleghany, near midway between the mouth of Mahoning and Pittsburgh.

Mahoning and Red Bank creeks have their sources in Chesnut Ridge, and with each, a course of about 35 ms., the former NW. and the latter SW., join the Alleghany in Armstrong *cty.* Clarion river has interlocking sources with those of Sinnemahoning and the Alleghany river. The Red Bank rises in the same region with Clarion river and Sinnemahoning; and Mahoning with Red Bank and the W. branch of Susquehanna.

In point of surface drained, Kiskiminitas is the largest confluent of the Alleghany, and having interlocking sources with those of the W. branch of Susquehanna, Juniata, and Youghiogany, seems to offer to the eye the most favorable link of intercommunication between the keys of the Ohio and Susquehanna, and the Potomac.

Alleghany river receives but two, conduits of moment from the east; those are French and Conewango creeks. The latter rises in Chataque *cty.*, N. Y., by 3 branches, the Chataque, Casadicta, and Conewango. These unite in N. Y., and forming a navigable stream, assumes a S. course, enters Warren *cty.* Penn.,

and falls into Alleghany at the town of Warren, after a comparative course of 40 ms.

French creek has its source in the extreme SW. angle of N. Y., and, increased by numerous branches from Erie and Crawford *cties.* Penn., forms a navigable river at Meadville. Flowing to the SE. from Meadville, 25 ms., French creek is lost in Alleghany river, at Franklin, Venango *cty.* The entire comparative course of French creek is about 80 ms.

There is no other feature in the hydrography of the U. S. more remarkable than the country from which Chataque and French creek have their sources. The extreme NW. waters of the former flow from within three, and those of the latter from within 5 ms., of the margin of Lake Erie.

Taken as in a state of nature, the Alleghany and its branches are the recipients of the northern part of the great western basin of Penn., and are but little impeded by falls, though rapid, as to current, from the declivity of their plane of motion.

The Monongahela, formed by two branches, the Monongahela proper, and Cheat river, rising in Pocahontas, Randolph, Harrison, Lewis, Monongahela, and Preston *cties.*, of Virg., unite 2 ms. within the S. boundary of Penn. The general length, above Penn., about 100 ms., in nearly a N. course. Preserving the latter direction, 60 ms. in Penn., and receiving the Youghiogany from the SE., the Monongahela mingles with the Alleghany at Pittsburgh, and forms the Ohio.

The various branches of the Monongahela, which derive their sources from the western chains of the Appalachian system, similar to the Potomac, claim a more than ordinary share of attention, as presenting the connecting links of a proposed line of canal improvement. Cheat river flows from the northwestern slope of Alleghany mountain, and draining the eastern part of Randolph *cty.*, passes Chesnut Ridge, enters Preston *cty.*, and there a navigable stream, continues N. to within 5 ms. from the S. boundary of Penn. Turning to the W. through Laurel Hill, and thence NW. crosses the S. line of Penn., and unites with Monongahela.

Youghiogany rises in the extreme southwestern angle of Md., between the sources of Potomac and Cheat rivers. Pursuing a northern course over Md. into Penn., and augmented by Castleman's river, its northern branch, the Youghiogany, turns to NW., and breaking through Chesnut Ridge and Laurel Hill, joins the Monongahela at McKeesport, 18 ms. above Pittsburgh. This is a fine mountain stream, which in all seasons except in periods of long drought, affords more than sufficient water for a supply of the most capacious canal; general comparative course, about 100 ms.; 30 in Md., and 70 in Penn. The Youghiogany heads with the Cheat branch of Monongahela, with the N. branch of Potomac, and by Castleman's river, with Juniata and Kiskiminitas. Should the Chesapeake and Ohio canal be seriously undertaken, the channel of the Youghiogany, from relative position, presents the most direct route to unite the waters of the Potomac with those of Monongahela.

At Pittsburg, the Ohio is formed, as we have seen, by the confluent waters of Alleghany and Monongahela. The former is the principal stream, flowing with a more rapid current than its rival. From Pittsburg to Beaver river, the Ohio pursues a NW. course 25 ms., thence winding to the W. 20 ms., in which it leaves Penn. and enters Ohio. Within the latter state, the Ohio river inflects to a course a little W. of S. 70 ms., reaching in that direction, nearly the same lat. with the S. boundary of Penn. The peculiar courses of the Monongahela and Ohio, forms one of the most remarkable intermediate peninsulas presented by the topography of the U. S. The two streams flow in very nearly opposite directions; the intervening space from 30 to 40 ms. wide, and with a mean length of 60 ms. Though hilly rather than mountainous, this peninsula is elevated to from 600 to 1000 feet in the dividing line of its waters, above the adjacent rivers. A number of creeks, none of which can exceed a comparative course of 25 ms., are poured from the interior spine into the respective recipients. The dividing ridge, is evidently continued N. of Ohio river, broken by that stream a few ms. below Pittsburg. The northern extension is continued, inflecting between the western sources of Alleghany, and the eastern sources of Big Beaver river, and is finally lost on the south-eastern shores of Lake Erie; the southern, stretching between the confluents of Ohio and Monongahela rivers, mingles with the Appalachian chains, between the sources of the latter and Little Kenhawa. This ridge is the western buttress of the upper basin of Ohio, and affords a striking example of the real difference between a chain of hills and one of mountains.

The descent from the rivers to the western ridge of Penn., is so gradual, and the hills scattered in such promiscuous winding, through the sources of the streams, that an ascent of 600 or 700 feet, in a few ms. is imperceptible; on the contrary, the mountain chains extend in regular lines uninfluenced, in their direction, by the water courses, and are abrupt and steep in their declivities. The mountains seem to have existed previous to the rivers, whilst the hills appear to have been formed by the abrasion of water.

Big Beaver, the first river which enters Ohio, pours its current from the N., and falls into its recipient, 25 ms. below the confluence of the Alleghany and Monongahela. Big Beaver is formed by the Mahoning, Shenango, Nesha-nock, and Conoquenessing creeks. The Shenango rises in Ashtabula ct. of Ohio, and Crawford of Penn., within 12 ms. from the SE. shore of Lake Erie, interlocking sources with those of Grand river, Conoaut, and French creek, and pursuing a nearly S. course over Mercer, receives the Conoquenessing from the NE., and entering Beaver ct., unites with the Mahoning, and forms Big Beaver.

The Mahoning is in reality the main branch; rising in Columbiana, Stark, Trumbull, and Portage cties. Ohio; its course is first nearly N. 30 ms., to near Warren in Trumbull. Winding to SE., it pursues that course nearly 35 ms., entering Penn. in the SW. angle of Mer-

cer, and joining the Shenango at N. lat. 41°, about 2 ms. within Beaver ct. Below the junction of the Mahoning and Shenango, Big Beaver flows a little E. of S. 20 ms., into Ohio river. Conoquenessing is the eastern constituent stream of Beaver, draining the peninsula between the Alleghany, Ohio, Big Beaver, and Shenango rivers.

The valley of Big Beaver is nearly circular, and about 70 ms. diameter; area 3850 sqms. It is worthy of remark, that the general courses are nearly on a direct NW. line; of the Youghiogany, below the mouth of Castleman's river, Monongahela and Ohio, from the mouth of Youghiogany to that of Big Beaver; and the latter and Mahoning, to about 3 ms. above Warren. This range of navigable water is upwards of 130 ms. direct, and from 180 to 200 ms., following the sinuosities of the streams.

The sources of the Mahoning interlock with those of the Tascarawas branch of Muskingum, and Cayahoga, and Grand river, of Lake Erie. See the tables of level under the heads of Columbia District, New York, Newton, and Virginia.

We now proceed to a review of Penn., as it respects political and moral features.

Taken as a whole, Penn. is divisible into three great sections, of very unequal extent. The smallest but much best peopled section, lies SE. from the Kittatunny Mountain or Blue Mountain; and contains about one third of Northampton, all Lehigh, Bucks, Berk, Montgomery, Philadelphia, Delaware, Chester, Lancaster, Lebanon, nearly one half of Dauphin, all York, Adams, Cumberland, and nearly all Franklin cties. The mountainous or middle section, extends over the cties. of Wayne, Pike, two thirds of Northampton, all Susquehanna, Bradford, Luzerne, Tioga, Potter, Lycoming, Columbia, Northumberland, Union, Centre, Clearfield, Cambria, Huntingdon, Mifflin, Perry, one half of Dauphin, all Schuylkill, Bedford, and Somerset, with the eastern part of Westmoreland and Fayette.

The western hilly section includes the cties. of McKean, Warren, Jefferson, Indiana, Armstrong, Crawford, Venango, Erie, Mercer, Beaver, Butler, Alleghany, Washington, Green, and the western parts of Fayette and Westmoreland.

Before proceeding to give the geographical detail of the state in general, the reader is presented with the following tables exhibiting the relative extent and population of each of the foregoing sections.

The relative density of pop. in Penn. has followed the quality of soil, perhaps, less than in any state of the U. S. The above table exhibits a singular inequality in the different cities, independent of either soil or commercial facility. It is seen that more than one half of the pop. exists on a small fraction above one sixth part of the entire area.

The following table exhibits the classified

pop. of this state, agreeable to the census of 1810, and 1820.

Penn. contains 3 cities, Philadelphia, Lancaster, and Pittsburg, and about 40 borough towns; the principal of which are, Reading, Harrisburg, Easton, and W. of the mountains, Greensburg, Brownsville, Washington, and Meadville.

The advance of pop. in this state, has been generally steady; about the middle of last century, it contained about 220,000; at the commencement of the revolutionary war, the pop. had risen to upwards of 350,000; in 1790, 434,373; in 1800, 602,545; and in 1810, and 1820, as shown in the table above.

There is no other section of the U. S. where the elements of pop. are so various as Penn. Taken relatively, as to national descent this pop. is composed of English, Irish, Germans, Scotch, Dutch, &c. and the descendants of these nations. The English language is general, but entire neighbourhoods of Germans have retained the German language. This is particularly the case in many of the southeastern cities. The religious denominations are also numerous, consisting of almost every sect of Christians known in the U. S. The most numerous denominations are, however, Presbyterians, Roman Catholics, German Calvinists, German Lutherans, Friends, Baptists, Episcopalians, Methodists, &c. The unitas fratrum, or Moravians have some small but very respectable congregations in different parts of the state.

The literary institutions of Penn., are, the university of Pennsylvania. See *Philadelphia City*; Dickinson college at Carlisle, Jefferson college at Canonsburg, Washington college at Washington, Alleghany college at Meadville, and Mount Airy college in Germantown.

Respectable academies exist in most of the city towns, and ample donations have been made by the legislature to foster the interests of education. The various libraries, and other literary establishments in Philadelphia are noticed under that article, which see.

The Moravian brethren have excellent schools in Bethlehem, Nazareth, Littleton, and other places in the state. For Pennsylvania asylum for deaf and dumb persons, see article *Philadelphia*.

Perhaps the most extensive and best finished state road in the U. S. is that from Philadelphia, through Lancaster, York, Chambersburg, Bedford, and Greensburg, to Pittsburg. The southeastern section, and the southern and western sides of the state are generally well supplied with good roads; but great part of the northern

A list of the Canal and Lock Navigation Companies which have been organized, and to the stock of which the state has subscribed, the extent of the improvements contemplated, and the amount of individual and state subscriptions.

| NAME. | Extent of improvement. | Individual subscription. | State subscription. |
|------------------------|------------------------|--------------------------|---------------------|

To which add the cost of the Conewago Canal private property estimated at \$220,000, and the probable amount expended by White and company on the Lehigh, of \$150,000, together \$370,000, exclusive of the expenditure on the Schuylkill and Susquehannah, and Delaware and Schuylkill. The amount of expenditures on this branch of internal improvement will be \$1,916,510. If all these subscriptions, appropriations, and individual expenditures for roads, bridges, canals, &c. are added, the amount will be \$10,369,779.

The number of Canal and Lock Navigation companies, which have been authorized, is 18, of which 9 have made progress in the works.

Strenuous exertions are now making to improve the navigation of the Lehigh, Schuylkill, and Susquehannah rivers. See those articles. The Union canal, intended to unite the navigation of Susquehannah with the Delaware, is in progress. In brief, the general aspect of the state is improving steadily, if not rapidly. The number of machines, including saw and grist mills, now in operation in the state must exceed 6000.

A fair view of the commercial operations of Penn. cannot be given, as, from its local position, it possesses no point of general concentration. Baltimore and New Orleans are as much ports of this state, as is Philadelphia. With all these points of diversion, the amount of national revenue raised in Penn. stands in ordinary years, next to N. Y. Estimates of either imports or exports to and from this state are also liable to the foregoing difficulties; and are consequently, in all instances, too confined in value. In 1820, the value of exports was estimated at \$5,743,549.

The partial views taken of the commercial relations of this state, even by its legislature, may be seen from the subjoined table, being confined to Philadelphia.

By resolution 16th March, 1820, and 1st Feb., 1821, reciting, in the preamble, the importance of developing the resources of the state, and that as by the constitution of the U. S. it is de-

clared, that no state shall, without the consent of Congress, lay any imposts or duties on imports or exports, except what may be necessary for executing its inspection laws, and that there was reason to believe that the charges of inspection are more than necessary for the purpose aforesaid, the inspectors in Philadelphia were required annually, under oath, to report to the auditor general the quantity and value of the articles inspected, &c. The following is an extract from the last annual report.

Wheat is by far the most valuable of the vegetable staples of Penn., but large quantities of wrought articles, and also rye, oats, salted provisions, fruits, whiskey, live stock, iron in all

forms, of bar iron and hollow ware, flax-seed, &c. are exported.

Pennantown, village, Hunterdon cty. N. J., 10 ms. NNW. from Trenton.

Pena, town, Pike cty. Misu.

Penobscot river, falls into the Atlantic ocean, 50 ms. NE. from the mouth of the Kennebec. The basin of the Penobscot is 150 ms. in length, with a mean width of 55 ms. The sources of this remain imperfectly known, but reach above N. lat. 45°, and interlock with the sources of Chaudiere branch of St. Lawrence, those of St. John's river of New Brunswick and Maine, and those of Kennebec. This basin extends over an area of 8000 sqms. The tide extends to the town of Bangor, 50 ms. above the entrance of the bay. Though draining less surface than the Kennebec and Androscoggin, the Penobscot is more navigable than either, and is considered as the principal stream of Maine. It does not immediately occur in the Penobscot at the head of the tide. Boat navigation remains uninterrupted 20 ms. farther inland. Timber and fish are the chief staples exported from this fine river, the former in immense quantities.

From Penobscot bay to that of Passamaquoddy, in a distance of about 100 ms., a number of small rivers enter the Atlantic ocean, the principal of which are, Union river, Narraguagus river, Pleasant river, Chandler's river, Machias, and East rivers.

Union river falls into the Blackhill bay, the Narraguagus into Pigeonhill, or Narraguagus bay, Pleasant river into the bay of the same name, Chandler's river into English bay, and Machias and East rivers into Machias bay. None of these streams have sources 60 ms. inland, and though in a very remarkable manner supplied with convenient harbours, the inland commerce of the country is very confined.

Penobscot, cty. Maine, bounded by Washington E., Hancock S., Kennebec SW., Somerset W. and L. C. N. This cty. embraces the central part of the state on Penobscot and St. John's rivers. Its extent cannot be very accurately determined. Most of its area remains an unsettled wilderness. Staple, lumber. Chief town, Bangor. Pop. 1820, 13,670. N. lat. 45° and lon. W. C. 8° E. intersect in the southern part of this cty.

Penobscot, bay of Maine, at the mouth of the river Penobscot. It is long and spacious, and its E. side is lined with a cluster of small islands.

Penobscot, seaport and pst. Hancock cty. Maine, on the right side of Penobscot bay, 10 ms. above Castine, and 40 below Bangor. It is a place of considerable commerce—and in 1813, the shipping owned there exceeded 24,000 tons.

Paras, village of France, in the department of Ardèche, and late province of Dauphiny. Noted for its wines, and is 41 ms. NW. of Privas.

Peraclyan, town of Russia, in the government of Kiow, 44 ms. SE. of Kiow. Lon. 31° 50' E. lat. 50° N.

Perche, late province of France, in Orleans's, 35 ms. long, and 30 broad; bounded on the N. by Normandy, on the W. and S. by Maine, and on the E. by Beauce. It takes its name from a

forest, and is pretty fertile. It is now included in the department of Orne.

Perche river, psto. on a small creek, so called, in Jefferson cty. N. Y. The creek rises by a small lake, 18 or 20 ms. NE. from Sackett's Harbour, and falls into Black river bay, 4 ms. below Oranville.

Perches and Carr, Rapids de, on the south-westerly branch of the Ottawa river, immediately above the Portages des Parresseaux.

Perchville, pstv. Brunswick cty. Virg., 68 ms. a little W. of S. from Richmond.

Perco, town of Northumberland cty., L. C.

Perco, tp., in the cty. of Northumberland, in the cty. and N. of Craanah, U. C.

Perdido, small bay and river, forming part of the boundary between Alabama and Florida. The Perdido rises in the pine woods, NW. of Pensacola, flows S. 10 or 15 ms., opens into a narrow and winding bay, which communicates with the Gulf of Mexico by a narrow outlet, nearly parallel to the shores of the Gulf. From the foregoing circumstance, and the flatness of the coast, the entrance into the Perdido bay, is imperceptible at a very short distance; hence its name.

Perkop. See *Prekop*.

Persia, one of the great divisions of southern Asia. In our books, this term is used specifically for an immense kingdom extending from the Indian ocean to the Caspian sea, and from the Euphrates to the Indus river. In modern times, if it ever was so, this part of Asia has not at any period been united into one sovereignty, and now contains two distinct empires, Persia in the West, and Afghanistan in the East, whilst the tribes of Arabs, and the princes of the Makran in the South, compose petty and independent states. These subdivisions are not merely political, they are natural, and founded on difference of language, and natural position.

Persia, taken in the utmost extent of the term, extends from N. lat. 25° to 40° , and comprises Kirvan, Aderbidjan, Ghilan, Mazandaran, Khorasan, Irc-Adjemi, Persian Koordistan, Khosistan, Farsistan, Kerman, Makran, Segistan, Balk, and all western Afghanistan. These provinces occupy an area of 1400 ms. in length from E. to W., with a mean width of 1000, or with an area of 140,000 sqms. Russia has seized the NW. part, and the Afghans are independent in the E., leaving to Futte-Alli-Schah, a real authority over the central and western, and a nominal power in the southern provinces. Persia, therefore, restricted the kingdom between Asiatic Turkey and Afghanistan, comprises Aderbidjan, Ghilan, Mazandaran, Irc-Adjemi, Farsistan, Khosistan, and Kerman, with part of Chorasani, and Koordistan. The area of Persia thus defined is about 800,000 sqms. Pop. perhaps 8,000,000.

It has been remarked of Persia, that though limited on all sides by fine rivers, that no stream of any considerable magnitude is found in these extensive regions. The Indus, Oxus, Caspian Sea, the Kur, the Tigris, and Eu-

phrates, encircle towards the centre, a very elevated country. High mountains range from E. to W., skirted by saline valleys or plains interspersed with lakes of salt water without an outlet. This geographical structure prevails from the mountains of Indostan, to those of Turkish Armenia. In reality, these features of physical geography, which distinguish Persia, are common to central Asia, and the Caspian and Aral seas, are only the larger and more prominent of those detached saline basins.

The most morally influential feature, however, in Persian geography, is, its deserts, which cover far more than one half the whole superficies, and isolate the provinces. Amongst the Persian deserts, five are particularly noticed: Karakum in the N. of Khorasan; a second 360 ms. long, and near 200 wide, between Irc-Adjemi and Khorasan; a third in northern Kerman; and those of Kiah, and Makran. These arid tracts extend over three-tenths of the whole country. Excessive heat in summer, and all the rigours of a polar winter prevail over the open, elevated and salt plains of Persia. The two extremities on the Caspian sea, and Persian Gulf are low, marshy, and in a peculiar manner unhealthy. The high table land of the centre is, however, distinguished for health, and many of the arable valleys, present nature in its most attractive garb.

This singular region is inhabited by a people, as strongly marked; the proper Persians are Mahometans of the sect of Iah, but are completely contrasted with the Turks of the sect of Omar. The Persian is open, polite, liberal, and where not instigated by some peculiar cause, humane. The government is, however, a despotism, as unlimited, perhaps more so, than that of Turkey; therefore, with all their natural noble qualities, the Persian shares the general degradation of Mahometan nations. In a country where silk, gold, and brocade, cloathe the wealthy few, slavery, tears, and contumely are the lot of the crowd.

Perrys, cty. N. C., bounded by Virginia N., Granville E., Orange S., and Caswell W. It is a square of 20 ms. each side, area 400 sqms. The extreme NW. sources of Neuse and Pamlico rivers, rise in the SE. angle of this cty., whilst its NW. part is drained by the SE. confluent of Dan river. Pop. 1820, 9029. Perth, borough of Stld., capital of Perthshire, on the SW. side of the Tay, which is navigable for small vessels, but the largest vessels are obliged to unload at Newberg. The salmon fishery is a great article of trade; and it has considerable manufacture of linen and cotton goods, leather, boots, shoes, and gloves. In 1811, the number of inhabitants was 17,000. It is 35 ms. N. by W. of Edinburgh. Lon. $3^{\circ} 20' W.$ lat. $56^{\circ} 24' N.$ Pop. of the cty. 1801, 126,336, in 1811, 135,093, and in 1821, 139,050.

Perth Amboy, seaport, Essex cty. N. J., seated on a neck of land, between the river Rariton, and Staten Island Sound. Its situation is high and healthy. It lies open to Sandy Hook, and is one of the best harbours on the continent. It is 25 ms. SW. of N. Y. Pop. 1820, 798. Lon. $75^{\circ} W.$ lat. $40^{\circ} 35' N.$

Peru, late a province of Spain, in S. America. It lies between lat. $1^{\circ} 30' N.$, and $25^{\circ} 10' S.$, being nearly 2000 ms. long from N. to S., and 350 in breadth. It is bounded on the N. by Popayan, on the E. by the country of the Amazons and Paraguay, on the S. by Chili and La Plata, and on the W. by the Pacific Ocean. The land next the sea is mostly barren, some valleys excepted, into which the rivers flow from the hills to the N. Between the hills are extensive valleys, yielding all manner of grain and fruit, and the weather temperate. The Andes are covered with snow the greatest part of the year, and consequently cold. The weather on this coast, from 4° to $25^{\circ} S.$, being generally serene. No rain falls in this tract, unless within 4° or 5° of the equator. On the Cordilleras, or high mountains, it rains or snows two-thirds of the year. Peru was, until the recent revolutions in Spanish America, divided into three great audiences, which were Quito, Lima, or Los Reyes, and Los Charcos. The first were fixed at St. Fe de Bogota, the capital of the kingdom of Granada, and extended over the whole of Terra Firma, and the audience of Quito. In the jurisdiction of the second, established in 1776, were the provinces of Plata, Buenos Ayres, Paraguay, Tucuman, Potosi, St. Cruz de la Sierra, and the towns of Mendoza, and St. Juan. Lima is the capital.

Peru is now, (1826,) completely independent of Spain; part has been incorporated with Colombia, part with La Plata, and the residuc forms the republic of Bolivar.

The staple commodities of this great country, include nearly all that is valuable in the vegetable and mineral kingdoms.

Pe-tcheli, *Tcheli*, or *Lip-fu*, the principal province of China; bounded on the N. by the great Wall and part of Tartary; on the E. by the Yellow Sea; on the S. by Chang-tong and Honan, and on the W. by the mountains of Chan-si. It contains 9 cities of the first class, which have several others under their jurisdiction. The temperature of the air in this province does not seem to agree with its latitude; for although Pe-tcheli extends no further than the 42d degree N., yet all its rivers are so much frozen during 4 months in the year that wagons with the heaviest loads may safely pass them. The soil is sandy, and produces very little rice, but it abounds with all other kinds of grain, and with the greater part of the fruit trees we have in Europe. Peking is the capital.

Petersburgh, metropolis of the Russian empire, in the government of the same name, is situated on the river Neva, near the Gulf of Finland, and is built partly upon some islands in the mouth of that river, and partly upon the continent. So late as the beginning of the last century, the ground on which Petersburgh now stands was only a vast morass, occupied by a few fishermen's huts. Peter the Great first began this city, in 1703. He built a small hut for himself, and some wretched wooden hovels. In 1710, the Count Golovkin built the first house of brick, and the next year, the emperor with his own hand, laid the foundation of a house of the same materials. From these small beginnings rose the imperial city of Petersburgh; and, in less than 9 years after the wooden hovels were first erected, the seat of empire was transferred from Moscow to this place. The streets, in general, are broad and spacious; and three of the principal ones, which meet in a point at the admiralty, are at least two ms. in length. Most of them are paved; but a few are still suffered to remain floored with planks; and, in several parts of this metropolis, wooden houses, scarcely superior to common cottages, are blended with the public buildings. The brick houses are ornamented with a white stucco, which has led several travellers to say, that they are built of stone. The mansions of the nobles are vast piles of buildings, furnished with great cost, in the same elegant style as at Paris or London, and situated chiefly on the S. side of the Neva, either in the admiralty quarter, or in the suburbs of Livonia and Moscow, which are the finest parts of the city. The views upon the banks of the Neva exhibit the grandest and most lively scenes imaginable. That river is in many places as broad as the Thames at London; it is also deep, rapid, and as transparent as crystal; and its banks are lined on each side with a continued range of grand buildings. On the N. the fortress, the academy of sciences, and the academy of arts, are the most striking objects. On the opposite side are the imperial palace, the admiralty, the mansions of many Russian nobles, and the English line, so called because it is mostly occupied by English merchants. In the front of these buildings, on the S. side, is the quay, which extends 3 ms., except where it is interrupted by the admiralty; and the Neva, during the whole of that space, has been embanked, by order of the late empress, by a wall, parapet, and pavement of hewn granite. Petersburgh,

though more compact than the other Russian cities, still bears a resemblance to the towns of that country, being built in a very straggling manner. It has been lately inclosed within a rampart, the circumference of which is 14 ms. In it there are no fewer than 35 great churches, (almost every sect of Christians being tolerated,) and the number of inhabitants is supposed to be about 300,000. It is said that 3000 one-horse sledges are employed for passengers in the streets, in winter. From its low and marshy situation, it is subject to inundations, which have sometimes risen so high, as to threaten the town with a total submersion. The opposite divisions of Petersburgh, situated on each side of the Neva, are connected by a bridge on pontoons, which, on account of the large masses of ice driven down the stream from lake Ladoga, is usually removed when they first make their appearance; and, for a few days, till the river is frozen hard enough to bear carriages, there is no communication between the opposite parts of the town. Among the noblest ornaments of Petersburgh, is an equestrian statue of Peter the great, in bronze, erected by Catherine II. in 1782. It is of colossal size, and stands on a huge pedestal of rock, brought there at great expense. Within the walls of the fortress, is the cathedral of St. Peter and St. Paul, in which are deposited the remains of Peter the great, and of the successive sovereigns, except Peter II. who was buried at Moscow. Petersburgh is 355 ms. NW. of Moscow, 750 NE. of Vienna, 525 NE. of Copenhagen, and 300 NE. of Stockholm. Lon. 30° 25' E. lat. 59° 50' N.

Petersburg, port of entry and pstv. in Dinwiddie cty. Virg.; situated on the S. side of Appomattox river, in lat. 37° 12' N., and lon. 78° 8' W. It is 25 ms. S. of Richmond, and 79 W. of the borough of Norfolk. This is a place of considerable trade in cotton, grain, flour, and tobacco; the exports of a year having amounted to 1,390,000 dollars. Being in the centre of one of the earliest settled parts of the State, it is surrounded by a wealthy and populous country.

The situation of Petersburg, is peculiarly well adapted to both commerce and manufactures. The falls in Appomattox, present excellent sites for machinery; whilst a canal cut around them obviates their natural impediment to navigation. The town now contains, 2 banks and an insurance office. It occupies part of 3 cities. The body of the place is in Dinwiddie, but it also comprises the village of Blandford in Prince George cty., and Powhatan in Chesterfield cty. This town from some local cause is in a remarkable manner exposed to fires. Three have already occurred in the current year, 1836.

Philadelphia, city of Asiatic Turkey, in Natioia, seated on the foot of the mountain Timolus, in an extensive plain. The Greeks retain its ancient name, but the Turks call it Allahjah. It contains 11,000 inhabitants, among whom are 2000 Christians. It is 40 ms. ESE. of Smyrna. Lon. 28° 15' E. lat. 38° 28' N.

Philadelphia, cty. Penn.; bounded by Delaware river SE., Delaware cty. SW., Montgomery cty. NW., and Bucks cty. NE. Length 18, mean width 7 ms.; area about 120 sqms., exclusive of the space occupied by Philadelphia and its suburbs.

The distinction made in the returns of the census of 1820, between the city and cty. of Philadelphia, gives a very inadequate representation of the respective population of each. To all commercial, and moral purposes, Philadelphia embraces the city, properly called, Southwark, Spring Garden, the incorporated Northern Liberties, and Kensington. With the aggregate pop. of these sections, the city contained in 1820, 108,809 inhabitants, and the cty. proper, separate from the city, 28,283.

With all this deduction, Philadelphia cty. is one of the most densely populated cities in the U. S. Besides the city of Philadelphia and its suburbs, the cty. contains the borough of Frankford, and cillages of West Philadelphia, Hamilton, Mantua, Germantown, Holmesburg, Distletown, and some others of lesser note.

Philadelphia, the second largest city in the U. S., in Philadelphia cty. Penn., between the Delaware, and Schuylkill rivers, 5 ms. above

their junction. The original city was a triangle, the base being the Delaware, extending W. to a little W. of Schuylkill, 12,000 feet or a small fraction above 2 m., and N. and S. 5,700 feet, or a little more than a mile. In the advance of commerce and other business the buildings were naturally extended along the main stream, the Delaware, and now reach, from the lower part of Southwark to Spring run, the upper part of Kensington, near a m., and along Market street, from one river to the other. The N. and S. streets amount to 23, those from E. to W. 14, in the city proper. Except Dock street, those of the city are at right angles. That regularity is not, however, extended to the Liberties. In the latter the streets intersect in most instances with more or less obliquity. Besides the main or principal streets, the city and liberties are diversified by a great number of minor streets, lanes, and alleys. The streets vary much in width. Broad street is 113, High or Market 100, Mulberry or Arch street 60 feet, and the others of various widths.

The site of Philadelphia was originally but little diversified by elevations. The lower part was level, and the upper waving. The whole composed of an alluvial deposit of sand and gravel, overlaid by a thin stratum of vegetable earth. Common sewers have been formed under most of the principal streets, which carry the filth into the Delaware, and preserve the health, and contribute to the convenience of the inhabitants. No city in the U. S. is so well supplied with excellent water. The works erected on the Schuylkill, to elevate the water into a reservoir, and that reservoir itself, are works which would do honour to any city. An enormous dam has been erected in the river, by which wheels are set in motion, which raise the water into a reservoir. This depository of fluid is placed on an eminence, above every other part of the site of the city. Pipes are thence continued, which convey the water to every part of the city proper. Penn township, the district of Southwark, and the incorporated Northern Liberties, have this year, (1856) made arrangements with the city Councils for a supply of Schuylkill water. For the elevation, length, depth, and solid contents of the reservoir, see article *Waterworks*.

Philadelphia now contains upwards of 60 places of public worship, of which are:

Few of the churches of Philadelphia, have any distinguishing character of architecture or extent, to entitle them to particular notice. To this observation the exceptions are, Christ church in Second street, the new and elegant Presbyterian church, at the corner of Seventh and Washington streets, and the church in Tenth street, between Chesnut and Market.

Other public buildings are, the State House, on the E. side of Chesnut, between Fifth and Sixth streets, the New Theatre, on the N. side of Chesnut, second house above Sixth. This elegant building does credit to the city, and to Strickland, the architect. The National Bank, on the S. side of Chesnut street, between Fourth and Fifth streets, is a magnificent structure, and one of the few in the United States, constructed entirely of marble—architect, also, Strickland. The Philadelphia Bank, on Fourth and Chesnut, presents to the eye of a traveller nothing in particular; but the Bank of Pennsylvania, on Second between Chesnut and Walnut, is a chaste marble structure—architect Latrobe. It may excite just astonishment, that a city so commercial as Philadelphia, has no Exchange.

The buildings, however, which contribute most to distinguish Philadelphia, are those appropriated to literary and humane purposes. Of these, the City Library claims the first notice. It stands on Fifth and Library streets, between Chesnut and Walnut. It is a plain, though spacious brick building, decorated with the statue of its founder, Franklin, in a niche in front. The statue is formed of a block of white marble, executed in Italy. The Library was incorporated in 1742: and now contains above 6,000 volumes. It is composed of two connected libraries; that of the city, properly so called, and the Loganian, the latter a donation from D. Logan. The library is open the afternoon of each day of the week, Sunday excepted, and free of charge by visitors in the library-room, first of expense. Nearly opposite the Library, stands the Hall of the American Philosophical Society, containing the Hall of the Society, and the Atheneum. The Atheneum was incorporated in 1815, and now contains a valuable library, and the periodical works of greatest celebrity, published in the United States and Great Britain. The Philosophical Society possesses, also, in the same building, a very valuable library, and cabinet of minerals. This society was incorporated in 1769.

Peale's Museum, the most extensive collection of objects of Natural History in America, occupies several rooms in the State House.

The Academy of Fine Arts, is situated on the N. side of Chesnut, between Tenth and Eleventh streets. A view of the collection of

paintings, prints, statues, and busts, in this establishment, would alone reward a distant and extended visit to Philadelphia.

The Academy of Natural Sciences, incorporated in 1817, stands on the S. side of Arch, between Front and Second streets. It has a very valuable, and tolerably extensive collection of objects of Natural History, and a library exceeding 2000 volumes.

The University of Penn., occupies a spacious edifice on the W. side of Ninth, between Chestnut and Market streets. The University as a literary institution was formed from the old University, the College and charitable Schools of Philadelphia, and was incorporated in 1791. It embraces natural science and law, but is known chiefly as a medical school, in which latter capacity, it deservedly holds a high rank; not only among the universities of the U. S., but of the world. The number of students vary from four to five hundred annually. In the medical department there are seven Professors.

There are at this period, (December, 1822,) in all, public and private, 43 lecturers, actually delivering lectures on various subjects in Philadelphia.

The Pennsylvania Hospital deserves special notice. The buildings are between Spruce, and Pine streets, and between Eighth and Ninth streets. This establishment was formed in 1751, and it must be pardonable to say, stands at the head of such institutions in the U. S. It embraces the two great objects of national charity; first, the protection and care of those whose maladies disable them from personal exertion, and whose poverty denies them the means of procuring other aid;—and a Lunatic Asylum. In the Hospital are an extensive Anatomical Museum, and the second largest library in the city, consisting of upwards of 5000 volumes.

The celebrated Painting of "Christ healing the Sick," the present of its author, *Mr. West*, is deposited for public exhibition in a building erected for that purpose, in front of the Hospital, on Spruce street.

The Almshouse, to which is attached an extensive Infirmary, under the superintendence of many of the most respectable physicians in the city, is also situated between Spruce and Pine streets, but between Tenth and Eleventh streets.

Besides these extensive public, there are many private charitable institutions in the city.

The Widow's, and Orphan's Asylum is one of those private establishments, the fruits of the active benevolence of a number of Philadelphia ladies. If the eye of an angel can view with complacency any human work, it must be one, where bereaved old age, is protected, and where helpless orphan innocence is sheltered, protected, clothed and educated. This truly sublime institution is in Cherry and Schoylkill Fifth streets.

In an unusually inclement night, January 23-24th, between one and two A. M. 1822, a most distressful calamity befell the Orphan's Asylum, by which the building appropriated to the Orphans, and some of those interesting children were consumed by fire. The charitable feel-

ings of the citizens in general, and the munificence of the Legislature of Penn., have repaired the loss, and as human means could effect such a work. The house is now re-built with renewed convenience, extent, and safety; and the funds of the institution greatly augmented.

Franklin Institute.—The Hall of the Institute, is situate in S. Seventh street near Market street; it is 60 feet in front, and 100 feet in depth. The whole expense of the building including the ground, was \$35,500. The second story of the edifice is occupied by the District Court of the U. S. The number of members is upwards of 1600.

The third annual exhibition has just closed, (Oct. 1826) and the premiums have been awarded. In their report of the exhibition of last year the managers remark: "Few, if any, exhibitions of American manufactures, have ever presented such a variety of splendid, tasteful, and well executed goods: embracing many of the most important arts, and evincing a great progress in the extent of our manufactures, as well as a great improvement in the execution."

In the Institute are delivered regular lectures on Chemistry, Mechanics, and Natural History, besides occasional volunteer lectures on Miscellaneous subjects. The managers of the Institute say: "The collections are increasing; the models have been augmented;" "a large addition has been made to the minerals:—The Library is small but increasing."

Arcade.—This beautiful public building is situate on the N. side of Chestnut, near Sixth street; it is still in an unfinished state, (1826) but enough already appears to justify the opinion, that it will be one of the greatest ornaments to our city. The site is eligible, the lot is 109 feet in front, and of 150 feet in depth to Carpenter street directly opposite Decatur street, which furnishes a wide thoroughfare to High street. The Arcade is 100 feet in width, leaving an alley of 4½ feet on each side. Both of the fronts are of Pennsylvania marble, perforated with arches that run through the whole body of the building. The architectural composition of the Arcade is modelled from the Greek. Four noble arches springing from the sculptured caps of the antæ, support a broad frieze, upon which rests a justly proportioned cornice surmounted by a balustrade. The elevation of the front on Chestnut street, contains niches and friezes, enriched with figures emblematic of the character of the edifice. Whole sized figures in full relief, representing Commerce, and the Arts, will occupy the niches of the wings.

The plan of the first principal floor will be governed by two 14 feet avenues, covered with a glazed roof running longitudinally through the building, and two single, and one row of double stores opening thereon and facing each other. These avenues will be paved with flag stones. A double flight of marble steps at each end, will form the ascent to two saloons 70 feet long; situate in the front of the second story, open to the street, and communicating with three similar ranges of stores fronting on galleries, defended by iron balusters. The whole of the third story, which is now putting up, will be rented to the

Philadelphia Museum at \$1,500 per annum, furnishing that valuable institution a series of rooms of upwards of 600 feet in length, besides a gallery to exhibit all their interesting objects. Every store is fire proof, and the whole building will be enclosed with iron railings. The expense of the Arcade, including the lot will be \$162,000. The contractors are, John Haviland architect, and Peter A. Browne, Counsellor at Law. It will be ready for occupation about the 1st of June, 1837. Application has already been made, for many of the stores and cellars. The stock is divided into shares of \$100 each, of which \$65,000 is owned by the contractors.

By an act of the Legislature of the state, a particular system of public instruction has been framed, and put into operation in the city and city of Philadelphia, and far as practicable conducted on the Lancasterian plan.

During the three years since the Lancasterian system of education, was organized in the city and city of Philadelphia, 7809 children have partaken of its benefits. The number attending the schools in February, 1822, were,

The expense of the sections not under the care of the controllers, amounted to \$2657 12 cents.

The whole amount expended for the support of schools in the year 1821, was \$11,714 83 cents, which keeps the cost of education, within the maximum limit of four dollars per annum for each child.

The number of children in the sections where Lancaster's system is not established, does not appear by the controller's last report.

Those parts of the city, not particularly mentioned, are the sections intended by the first and last paragraph of this extract.

As a commercial port, Philadelphia, from the peculiar features of the Delaware river, is more liable to be impeded by ice, than is either New York or Baltimore; but independent of that circumstance the former possesses perhaps as many natural advantages as either of the others. In 1816, the tonnage of the shipping, owned in Philadelphia, amounted to 101,830 tons. At present 1822, the tonnage amounts to upwards of 120,000 tons. The Delaware is not navigable to this city, for ships of the line of the first class.

As a manufacturing city, Philadelphia is first in the Union. It would be useless to specify the number or value of each article; it may suffice to say, that in the City, Liberties, and environs almost every object of necessity, and some of ornament and luxury are produced. According to Cox's View, the value of manufactured articles produced here in 1810, exceeded 16,000,000 of dollars. Printing is very extensively carried into operation; both in the production of books, and public prints.

The inland trade of Pennsylvania is very extensive. This city competes with New York, New Orleans and Baltimore in the supply of the inhabitants in the basin of Mississippi. Under the articles Leligh, Delaware, Schuylkill, and Susquehanna, may be seen the various natural facilities of external and internal water communication open to Philadelphia; and under the same, and other articles, are noticed the artificial operations, either performed, in progress, or designed, to aid the natural facilities, or remove impediments to intercommunication.

The U. S. Navy Yard at Philadelphia composes a part of Southwark. The depth of water is sufficient for launching vessels of the first class, but not of floating them with their guns, crews, and other necessary lading. Before being prepared for sea, ships of the line have to be removed lower down the Delaware.

The environs of Philadelphia have been justly admired for soft, and yet varied scenery. The banks of the Schuylkill, are much more picturesque, than those of the Delaware; and the former, also, much more extensively and tastefully improved. Pratt's gardens above, and Bartram's below the city, are indeed elegant and rich additions to a picture rendered more seductive by contrast with the two fine villages of Hamilton and Mantua, and two beautiful and noble bridges which connect those villages to the city. The whole intermingled with numerous detached seats, and crowned by the artificial cascade, locks, water works, and reservoir at Fair Mount.

Taken together, if we engroup its advantages and disadvantages; if we consider the order of its citizens, the cleanness, and regularity of its streets, and its well cultivated and abundant neighbourhood, it may be doubted whether more is concentrated in any other place to minister to human comfort and prosperity.

The following valuable table was inserted in the National Gazette of July 3d, 1824, and now published in Carey and Lea's "*Philadelphia in 1824*," for which it was originally compiled.

National debt.—The whole amount of the debt of the U. S. on the 1st of January, 1824, was \$90,451,834 24 cts.—of this sum \$43,509,211 52 cents are held in Philadelphia, thus divided:

| Baltimore, | 208,065 16 |

Bank of the U. S.—Philadelphia holds in the capital stock of the Bank of the U. S., 37,269 shares, valued, according to the present price, at \$122 per share, and amount to \$4,541,818. The annual dividend received in this city on that stock at the present low rate of dividend, is \$186,345.

|-------------------------------|---------|
| | Shares. |
| New York holds in this stock, | 40, 89 |
| Massachusetts, | 27,837 |
| Baltimore, | 38,490 |

Commerce.—Philadelphia is the third, if not the second importing and exporting city in the Union, as will be seen below. I say the second, because the official accounts for Massachusetts, which stand next in amount to New York, comprehend the great commercial towns of Salem, Newburyport, &c. the trade of which, when subtracted from that of the state, would probably leave Boston below Philadelphia.

The comparative view of the commerce of the four principal districts stands thus for the last year:

| | |
|-----------------------------------|-----------------|
| New York imported, | \$29,421,342 06 |
| Philadelphia, | 13,696,770 00 |
| The whole state of Massachusetts, | 17,607,160 00 |
| Baltimore, | 4,946,479 00 |

| | |
|-----------------------------------|-----------------|
| New York exported, | \$19,038,990 00 |
| Philadelphia, | 9,617,192 00 |
| The whole state of Massachusetts, | 13,685,239 00 |
| Baltimore, | 5,030,228 00 |

The tonnage of Philadelphia stood thus on the 31st of December, 1824.—Permit, enrolled, licensed, &c. 84,927 tons; since which more than 10,000 tons have been added. There were built this last spring, as I am informed, 15 vessels, measuring 5000 tons.

Internal improvement.—The exertions of Philadelphia have far exceeded those of any city in the Union, for the promotion of internal improvement. It must be remembered that, vast as are the efforts of the state of New York, the city of New York has had no other agency in them than loaning money on good security and on interest, whereas the advances made by the citizens of Philadelphia have been hazarded upon their own responsibility, and exceed in amount the estimated cost of the great canals of New York. The several objects are alone given here, but they are taken from correct data.

Contributions to the state government.—The average annual charges of the state government of Pennsylvania, are about \$325,000, including interest on her debt. Philadelphia pays \$200,000 of these expenses, or four fifths of the whole.

Real and personal estate.—Not having at hand the last triennial assessment, I avail myself of that of 1817, a year of considerable depression, and I omit to take any account of the many valuable additions since made in splendid public and private edifices.

The city and suburbs (or county) are officially returned at \$55,418,579, which must be doubled, because the value put on real estate by assessors, is never more than half the market price.

Picardy, late province of France; bounded on the N. by Hainault, Artois, and the Strait of Dover, on the E. by Champagne, on the S. by the Isle of France, and on the W. by Nor

mandy and the English Channel. It now forms the department of Somme.

Pichincha, volcanic mountain in S. America, near Quito; only 11' S. of the equator, rising 15,939 feet above the ocean.

Pieghino, town of Italy, in the duchy of Milan, with a castle, in which Francis I. of France was imprisoned. It is seated on the Serio, 10 ms. NW. of Cremona, and 36 SE of Milan. Lon. $10^{\circ} 4'$ E. lat. $45^{\circ} 16'$ N.

Pickaway, cty. Ohio: bounded by Ross S., Fayette W., Madison NW., Delaware N., Fairfield E., and Hocking SE. Length 22, width 21 ms.; area about 470 sqms. A considerable portion of the land, especially on the eastern side of Sciota river, is of a very superior quality, and produces immense quantities of the different kinds of grain. "It has the four varieties of woodland, barren, plain and prairie. The plain land equals, and perhaps, excels any other land in the western country, for the production of wheat; generally producing from 40 to 45 bushels per acre of the first quality: the prairies are best for corn and grass, and the barrens produce excellent pastures. These three kinds of lands probably compose one-fifth part of the land of the cty.; the other four-fifths being now, or not long since, heavily timbered." Sciota river runs from N. to S. through nearly the middle of the cty. The other principal streams are Lower Walnut, Darby and Deer creeks. Pop. in 1820, 13,149. Ctl. lat. $39^{\circ} 48'$ N. lon. W. Piedmont, principality of Italy, 175 ms. long, and 40 broad; bounded on the N. by Vallais, on the E. by the duchies of Milan and Montferrat, on the S. by the cty. of Nice and the territory of Genoa, and on the W. by France and Savoy. It was formerly a part of Lombardy, but now belongs to the king of Sardinia, and lies at the foot of the Alps. It contains many high mountains, among which are rich and fruitful valleys, as populous as any part of Italy. In the mountains are mines of several kinds. This country has a great trade in raw silk; and it produces also corn, rice, wine, fruits, hemp, flax, and cattle. Turin is the capital.

Pienza, populous town of Tuscany, in the Siennese, with a bishop's see. It is 25 ms. SE. of Sienna, and 56 S. of Florence. Lon. $11^{\circ} 42'$ E. lat. 43° N.

Pierrat la Mouther, St., town of France, in the department of Nivernois, and late province of Nivernois. It is seated in a bottom, surrounded by mountains, and near a lake, which renders the air unwholesome, 15 ms. NW. of Moulins, and 150 S. of Paris. Lon. $3^{\circ} 13'$ E. lat. $46^{\circ} 48'$ N.

Pittsburg, city, Penn., and seat of justice for Alleghany city, on the point above the confluence of Monongahela and Alleghany rivers; 230 ms. from Baltimore, 282 from Philadelphia, and 1935 ms. by water above New Orleans. Lat. $40^{\circ} 27'$ N. lon. W. C. $3^{\circ} 2'$ W.

Pittsburg occupies an alluvial plain, and part of the adjacent hill, and lies in form of a triangle. It is admirably situated for trade and manufactures. The two fine streams which unite before its salient point, open to its citizens an immense surface, comprising part of west N. Y., and Virg., and all west Penn.; whilst the Ohio connects it with the wide basin below. The adjacent hills abound with mineral coal, lying upwards of 300 feet above the streets of the city. It has already become the theatre of great manufacturing establishments. In Pittsburg, and the adjacent villages of Alleghany and Birmingham, there are in operation 8 or 10

steam mills, 5 glass houses, 4 air furnaces, 3 or 4 breweries, a number of distilleries, with an indefinite number of blacksmiths' shops, slitting mills, woollen and cotton cloth factories, rolling and slitting mills, fulling mills, potteries, blast furnaces, flour mills, boat yards, &c. Glass of every description is made in this place, from window glass and porter bottles, to the finest cut crystal glass.

In a commercial point of view, this city is composed of Pittsburg properly so called, the Northern Liberties, extending from the city up the Alleghany, the village of Alleghany, on the opposite side of Alleghany river, a street extending up Monongahela from the city, and another directly opposite on the W. side of that stream, and lastly Birmingham also, on the W. side of the Monongahela, about half a mile above the city. The various manufactories and workshops, are scattered promiscuously through these several places.

The progressive population of this city and suburbs, has been rapid and tolerably regular. In 1824, there existed within one mile of the centre of the city, near 10,000 persons, classed as follows.

| | |
|-------------------------|------|
| Engaged in Agriculture, | 600 |
| do. in Manufactures, | 1200 |
| do. in Commerce, | 150 |

It appears from a census taken this year, (1826,) by Mr. Joseph Barclay, and inserted in the Pittsburg, Penn. Directory, for 1826, that the city contains 10,515 inhabitants; of whom, 2303 were born in foreign countries. In 1820, the pop. of Pittsburg, was, 7248. Since that time, there has been an increase of 3257. It is probable, that including the vicinity and adjacent villages, near 15,000 inhabitants reside at present, within one mile radius of the centre of Pittsburg. From recent examination, it is ascertained that there are in the city 1873 buildings, comprising 2360 tenements, and are as follows; brick, three stories high, 165; do. two stories, 330; stone, two stories high, 10; frame, three stories high, 10; do. two stories, 62; do. one story, 280; churches and public buildings, all brick, 17; shops, factories, mills, &c., 438.

Two fine bridges connect Pittsburg with the adjacent country, one over each river. Except in very clear and moderately windy weather, the view of Pittsburg is far from pleasing, as the atmosphere is generally surcharged with a heavy load of smoke; but when the air is rendered clear by wind, few places can present a series of views more interesting. The two rivers, their bridges, numerous manufactories, the varied hills, and other objects, are engrouped with great variety of effect.

Plaquemine, outlet of the Mississippi, 167 ms. above New Orleans, 36 above the efflux of Lafourche, and 96 below that of Atchafalaya. This is the principal channel of water communication between Attacapas and Opelousas, and the banks of the Mississippi. It is, however, only at seasons of high flood, that water is discharged into the Plaquemine. It joins Atchafalaya after a winding course of 15 ms.

Plaquemine Brule, small river of Lou., in Opelousas. It is the eastern branch of Mermentau river, and the drain of the central prairies of Opelousas.

Plaquemine Bend, remarkable bend of the Mississippi river, 70 ms. below New Orleans. Fort St. Philip stands on this bend, on the left bank of the river.

Plaquemine, SE. parish of Lou.; bounded by the Gulf of Mexico NE. and S., and by the parish of Orleans W. and NW. Length from the English Turn to the mouth of the Mississippi 75, mean width 43 ms.; area about 2355 sqms. Except along the margin of the Mississippi river above the Plaquemine bend; along Bayou Terre au Boeuf, and a few other confined slips, the surface of this parish is an immense grassy morass, naked of timber, and utterly unfit for cultivation. The soil, where arable, exuberantly fertile. Staples, sugar, cotton, and rice. The orange tree flourishes better here than in any other part of Lou. Below the Plaquemine bend, the arable margin of the Mississippi terminates. The Mississippi meanders through it from NW. to SE. Pop. 1820, 2354. Ctl. lat. 29° 30' N. lon. W. C. 12° 30' W.

Plassey, *Plains of*, in Bengal, about 30 ms. from Moorshedabad, and 70 from Calcutta. This spot is memorable for the great victory gained by Colonel Clive, in 1757, over the nabob Surajah Dowlah; by which was laid the foundation of the present extensive British empire in Hindoostan.

Plata, island of Peru, on the coast of Quito, surrounded by inaccessible rocks, and about 5 ms. long, and 4 broad.

Plata, rich and populous town of Peru, capital of the audience of Los Charcos, with an archbishop's sec. It is seated on the Chimao, 500 ms. SE. of Cusco. Lon. 63° 40' W. lat. 19° 16' S.

Plata, or *Rio-de-la-Plata*, large river of S. America, formed by the union of the three great rivers Paraguay, Uruguay, and Pavana. It crosses Paraguay, and enters the Atlantic ocean, in lat. 35° S. It is 150 ms. broad at its mouth. At Mont Video, a fort, above 100 ms. up the river, the land is not to be discerned on either shore, when a vessel is in the middle of the channel; and at Buenos Ayres, 200 ms. higher, the opposite shore is not to be discerned from that town. The Rio-de-la-Plata is a river of the first rank, and peculiar in the structure of its basin. The Parana rises within less than

100 ms. from the Atlantic ocean, and the Pilcomayo still nearer the Pacific. Those sources on S. lat. 20°, are distant from each other 1700 ms., and flowing towards each other, and directly from the respective oceans, into the interior of the continent, where they ultimately unite with many other streams, to form that immense assemblage of waters, named Rio-de-la-Plata. The space drained by the numerous confluent of the La Plata, exceeds 1,300,000 sqms., and very nearly equals the basin of the Mississippi. The bay below Buenos Ayres, is rather a wide estuary than a river. Sec. *Parana* and *Paraguay*.

Platte, *Ld.* river, U. S., rises in the Rocky mountains, about 29° W. from Washington, between lat. 39° and 42° N. Its general course nearly due E., and comparative length 600 ms. It falls into the Missouri, at lon. W. C. 18° 50'; lat. 41° N., and about 600 ms. by water above the junction of Missouri, and Mississippi.

Plymouth, seaport of Eng. in Devonshire, between the mouths of the Plym and Tamar; and next to Portsmouth, is the most considerable harbour in Eng. for men of war. There are, properly speaking, three harbours, called Catwater, Sutton Pool, and Harmouze. The first is the mouth of the Plym, and affords a safe and commodious harbour for merchant ships, but is seldom entered by ships of war. The second is frequented by merchant ships only, is almost surrounded by the houses of the town, and has lately been further secured by an extensive pier. The third is near the mouth of the Tamar, and is the harbour for the reception of the British navy, being fitted with moorings for about 100 sail, and having good anchorage for a much greater number. Adjoining to it, are docks, arsenals, and other conveniences for the building and fitting out of ships of war. It carries on a considerable foreign and domestic trade; and is 43 ms. SW. of Exeter, and 216 W. by S. of London. Lon. 4° 10' W. lat. 50° 22' N.

Poland, formerly an independent state of Europe, but now absorbed by Russia, Prussia, and Austria. Notwithstanding the entire annihilation of this kingdom, the name of Poland is retained in our books as one of the great subdivi-

sions of Europe. That part of Poland subject to Russia, it is true is still known by that name, but is as effectually a province as is any other fragment of that empire.

Poland, as it stood before its dismemberment, was an extensive, fertile, but generally, badly cultivated country. The towns of Poland are for the most part built of wood; and the villages consist of mean cottages, or huts. The country is so fertile in corn in many places that it supplies Sweden and Holland with large quantities, and it has extensive pastures. Peat, ochre, chalk, belemnites, agate, chalcedony, cornelians, onyxes, jasper, rock crystal, amethysts, garnets, topazes, sapphires, and even rubies and diamonds are found in Poland; also talc, spar, lapis calaminaris, coal, iron, lead and quicksilver. There is much leather, fur, hemp, flax, saltpetre, alum, manna, honey, and wax; and there are mines of salt, of a great depth, out of which is dug rock salt. Horses are numerous, very strong, swift, and beautiful; and horned cattle are bred in such numbers, that above 80,000 are driven every year out of the country. The principal rivers are the Dnieper, Vistula, Bug, Nemen, Dniester, and Bog.

Poland, kingdom of Europe. The central provinces of Poland have been recently formed into a kingdom of which the emperor of Russia is king. Some considerable share of the ancient liberties of Poland are preserved. Though subject to the same monarch with Russia, Poland enjoys a much more liberal form of government than the former empire. The king is represented by a viceroy, and chamber of ministers. The latter is accountable to the senate. This body consists of 30 members. The chamber of deputies are formed from the nobility, gentry and members of the cabinet. Very liberal principles of religious toleration also prevail. This state is subdivided into the palatinates of Cracow, Sandomir, Kalish, Lublin, Plock, Masovia, Podlachia, and Augustow. Area 47,560 sqms. Pop. 2,800,000. See *Gallicia, Prussia, &c.*

Polar Regions. From the discoveries made by Captain Parry in 1819, it is now determined that the Polar sea to the N. from America, is filled with islands and inlets. That really great Navigator wintered 1819—20, at lon. 114° W. from London; 37° W. from W. C., and at lat. 74° N. Since his return to Europe in 1820, capt. Parry has made another voyage to the Polar seas, and again wintered in those regions, but was unable to penetrate as far W. as he did in the previous voyage. It is now generally admitted, that if a passage between the Atlantic and Pacific oceans, exists, it can only be explored at all practicable, by proceeding from W. to E. See *Marth*.

Polynesia, distinctive name given to the numerous islands of the Pacific Ocean, E. from Austral Asia. The term Polynesia or "*Many Islands*," was adopted by the Portuguese authors, in the earliest period of European discovery in the western Pacific, and then applied to the Moluccas, Philippines and indefinitely, E. and NE. from Java. The president de Brosse, afterwards extended the name and applied it to designate all the innumerable islands from the Marians, to Owhyhee and Easter Island. By Malte Brun, the classification of de Brosse is adopted, and in the elaborate work of the former, Polynesia forms the eastern grand section of Oceania. Thus delineated, Polynesia comprises, Pelew Islands; Marian Islands, Mulgrave group; Mayjee Islands; Friendly Islands; Navigators Islands; Society Islands, better known by its principal island, Otaheite; Easter Islands,

Marquess Archipelago; and many others, detached and of various superficies.

Polynesia extends from W. to E. through 90° of lon. on both sides of the Equator; encircling one fourth part of the Earth, and embracing an extent of 6200 ms. N. and S., these numerous groups spread beyond each tropic, and consequently through near 50° of lat. or over 3450 ms. This space exceeds that of Asia, but the isles of Polynesia, are mere dots on an immense surface. Over upwards of 20 millions of sqms. it is doubtful whether much more than the one thousandth part is land. Those spots are, however, the abodes of eternal spring, summer and autumn united. Every thing but man smiles. The natural picture is never fading bloom; the moral is darkness rendered visible. In the advancing pop. of the two Americas, we have a vista opened, to view, though dimly, the future destination of Polynesia. It is not prophecy; but induction from passed events, to say that the Pacific isles must become resting places and marts of intercommunication between America, and Asia, and western Oceania.

When first discovered, though so widely distant from each other, the islands from Asia to America were found inhabited by a race of men who spoke the same general language, broken into various dialects. This language was also found to evidently have a common origin with the Malay; and again the Malay dialects have been traced to Madagascar. To what an undefined field of conjecture are we led on a review of this broken volume of human history? The Oceanian negro is found also in south-western Polynesia, but inferior in number, and far below the Malay in intellectual improvement.

This great section of the earth remains but imperfectly explored, large spaces on the Pacific Ocean have not been traversed by any civilized discoverer, who has made his researches known to the public. Similar to central Africa, and in some measure central Asia, and to the western parts of N. America, Polynesia has been discovered but not effectually surveyed.

Pomegue, island in the Mediterranean, near Malisilles.

Pomerania, dutchy of Germany, in the circle of Upper Saxony; bounded on the N. by the Baltic, on the E. by Western Prussia and Poland, on the S. by Brandenburg, and on the W. by Mecklenberg. It is watered by several rivers, of which the Oder, Reckenitz, Pene, Ucker, Rega, Persanet, Wipper, Ihna, Stopen, and Lebo, are the most considerable. The air is pretty cold, but compensated by the fertility of the soil, which abounds in pastures and corn, of which a great quantity is exported. It is a flat country, containing many lakes, woods, and forests, and has several good harbours, particularly Stetin and Stralsund. It is 250 ms. long, and 75 broad, and divided into Hither and Further Pomerania, both, with the island of Rugen, belong to the kingdom of Prussia. Stetin is the capital.

Pomerale, district of Polish or Western Prussia, which at the partition of Poland, fell to the share of the king of Prussia. Dantz is the capital.

Portland, port of entry, pstrd. and seat of justice Cumberland city. Maine. It is situated in the lat. of $43^{\circ} 40'$ N. and lon. of $69^{\circ} 52'$ W. on a point of land in Casco bay, about 50 ms. SW. of Wiscasset, and 64 NE. of Portsmouth in New Hampshire. The harbour is safe and commodious, and being near the ocean, is seldom encumbered with ice. The trade of the city is very considerable in the fisheries, in lumber, and ship-building. It contains two banks, an insurance office, and 8 or 10 places of public worship. A light-house, on Portland Head, facilitates the entrance into the harbour. Portland is very considerably the largest town in Maine. Pop. 1810, 7169, in 1820, 8531.

If the following extract from the Nat. Int. of Sept. 19th 1825, was much more diffusive, I would still give it insertion under the head of Portland Maine; no liberal reader will ask why?

The School System of the Eastern States deserves to be admired and imitated by the rest of the Union. It is the only system by which the benefits of education can be made as diffusive as they should be in this country. The following statement strikingly exemplifies how generally the people of that part of the Union are induced by the system to avail themselves of its advantages. The town of Portland, in Maine, embracing a pop. of 9 or 10,000, contains, by a late report, the following public schools, in which, at the annual examination on the 24th instant, the number of pupils were found which is annexed to each school, exclusive of the private seminaries of instruction.

Portland, Sept. 6.—Portland Public Schools.—On Thursday and Friday last week was the annual examination of the Public Schools in this town. The school committee, together with several gentlemen of the town and some strangers, visited the several public schools, and went through a minute and patient examination of the pupils in the various branches of instruction to which they had attended. The state of the schools generally was such as to give a high degree of satisfaction to all who visited them, and a most cheering promise of their future usefulness. The number of pupils in the several schools on the day of examination, were as follows:

Portugal, the most western country on the continent of Europe, about 310 ms. in length, and 150 in breadth. The principal rivers are, the Tago, the Duero, or Douro, the Guadiana, the Minho, and the Munda, or Mondego. Portugal is divided into six provinces, namely, Extremadura, Beira, Entre Minho e Duero, Trás los Montes, Alentejo, and Algarva. It is bounded on the W. and S. by the Atlantic Ocean, and E. and N. by Spain. Though Spain and Portugal are in the same climate, yet the air of the latter is much more temperate than that of the former, on account of the neighbourhood of the sea, and being less elevated. The mountain chains of the peninsula generally extend E. and W. and most of those of Spain reach into Portugal. The vegetable productions are very much varied, consisting of wheat, oats, barley, olives, apples, peaches, oranges, lemons, wines, &c. Silk is made in abundance, and of excellent quality. Wine is the chief article of export, but salt and wool are also produced and exported. In ordinary years, to the amount of one million and a half of dollars.

The recent revolutions in Europe and the Brasils, have very materially affected the foreign and domestic relations of Portugal. See *Brasil*.

Potomac, river of Virg., Md., and Penn., is a stream of incalculable importance in the interior, or inland navigation of the U. S. If we turn our eye to a map of Virg., we perceive the extreme northwestern sources of James river, flowing to the SW. along the mountain valleys; and extending our view to the head waters of Potomac, we behold them flowing parallel to each other NE., also down the mountain valleys; and in the latter case, we are struck with the very remarkable fact, that the Potomac rises W. of all the ridges of the Appalachian system, except that denominated Laurel Hill. The SW. angle of Md. on the extreme western base of the Potomac, having the residuary collateral ridges to pierce in its progress towards its recipient, the Chesapeake

Bay. This peculiar structure of the river valleys of the U. S., yields an unequalled facility of forming inland water communication through a very broad chain of mountains. Before proceeding to describe the Potomac, it may be remarked, that the Appalachian, or Alleghany system of mountains, does not form the dividing ridge which separate the water flowing into the Atlantic ocean, from those which enter the Mississippi basin; but that the separating river line, cuts the mountains obliquely.

The Potomac, draining the valleys of the Appalachian mountains from N. lat. $38^{\circ} 25'$ to 40° , unites its various branches before piercing the Blue Ridge, which it finally effects at Harper's Ferry, 60 ms. NW. from W. C. Below its passage through the Blue Ridge, to its egress into Chesapeake bay, is about 200 ms., following the windings of the stream. The tide extends to Georgetown, 3 ms. above the capitol in Washington, where it is arrested by the gneiss range of rocks. Ships of the largest class are navigated to the navy yard, one mile below the capitol. Like all other tributaries of Chesapeake bay, the Potomac, below the head of tide water, opens gradually into a long narrow bay. By a singular caprice of custom, the Susquehannah, is considered as terminating at the head of tide water, whilst in nature, what is known by the name of Chesapeake bay, is merely the continuation of that noble river; and in strictness, James' river, York river, Rappahannoc river, and Potomac, are its tributaries.

The sources of Cheat river, branch of the Monongahela, rise in Randolph cty. Virg., in the same valley with the Potomac, and those of the Youghiogany, with a single intervening ridge, separating them from those of Potomac, partly in Randolph and Monongahela cties. in Virg., and partly in Alleghany cty. in Md. Thus, here again occurs the second instance of advancing from the S. to N., of the origin of waters, flowing into the two opposite systems of the Mexican Gulf and Atlantic Ocean, without an intervening mountain, and yet amidst the Appalachian ridges. The peculiar features we have noticed in this section of country, has drawn the attention of persons inquiring into the subject of canal connection, between the two river systems.

The S. and main source of the Potomac, rises in Pendleton cty. Virg., at lat. $31^{\circ} 25'$ N., and the next considerable stream of the valley, the Shenandoah, rises in Augusta cty., as far S. as N. lat. 38° . The latter overtops the sources of York and Rappahannoc rivers, and interlocks with the sources of James' river; the middle ridge of the Appalachian, or the mountain properly called the Kittatinny, ranges between the Potomac Proper, and the Shenandoah. Both rivers, and all their branches, flow to the NE. down the mountain valleys. The Potomac continues in that direction, as far as N. lat. $39^{\circ} 41'$, within 2 ms. of the S. boundary of Penn., whence it turns at right angles, passes the Kittatinny mountain, and flows to the E. Forty ms. by comparative courses, below its passage through the Kittatinny, the Potomac receives the Shenandoah from the SW., and the united waters here pierce the Blue Ridge. This lat-

ter passage of the Potomac, through another of the Appalachian ridges, is known as the celebrated Harper's Ferry. At their junction, the Potomac has flowed by comparative courses 160, and the Shenandoah 120 ms.

From Harper's Ferry to the head of tide water, or to where the Potomac quits the primitive, and enters the alluvial sea border formation, is 50 ms., and thence continuing by a general course SE., and by comparative courses 100 ms., that river is lost in the Chesapeake bay at N. lat. 38°, having retained exactly the latitude of the sources of Shenandoah. The entire length of the Potomac valley is 300 ms., presenting a very remarkable navigable channel. Many of its minor valleys are composed of very productive soil, and already an immense amount of produce is reared within it, and transported to the Atlantic port.

It may be remarked that tobacco, as a staple commodity in large quantities, may be considered as limited by this valley, whilst wheat, rye, and the apple, as staples, may be viewed as commencing. From the peculiar form of the valley, and from the very great difference of elevation of its parts, it presents a greater variety of climate than could be, at a first glance upon its extent and position on a map, believed probable. If climate, and the features of nature, are both taken into the account, the Potomac presents the most favourable facilities of any river in the Susquehanna basin, to effect a water communication between the Atlantic Ocean, and the valley of Ohio.

The Potomac, in its natural state, is the most navigable branch of the Susquehanna. Ships of any burden can be brought up to the navy yard at Washington, 3 ms. below the extreme head of tide water. Washington is upwards of 100 ms. in a direct line, and following the Chesapeake bay and Potomac river, about 200 ms. distant from the Atlantic Ocean. Washington is, therefore, the point in the U. States, in which the largest vessels can be navigated the farthest into the interior of the continent.

Potosi, town of Peru, capital of a jurisdiction to the S. of Charcos. Here are some of the best silver mines in all America, in a mountain in the form of a sugar-loaf. Silver was formerly very abundant in this place, but the mines are now much exhausted, or at least, little is got in comparison of what was formerly. The country around is so naked and barren, that the inhabitants get their provisions from the neighbouring provinces. It is seated at the bottom of the mountain of Potosi 260 ms. WNW. of Africa. Lon. W. C. 9° 30' E. lat. 19° 50' S.

Potosi, or *Mine-au-Burton*, pst. and seat of justice, Washington cty. Misu., 70 ms. WSW. from St. Louis, and 55 W. from St. Genevieve. Mr. Schoolcraft, who visited this town, states, that at the epoch of his visit, (1815) it contained 60 houses, a court-house, jail, and academy; 3 stores, 2 distilleries, 2 flour mills, 9 lead furnaces, 1 saw mill, and a post office. This traveller describes the site, as a handsome eminence, a little N. of the principal mines, and separated from Mine a Burton by Mine Creek. It is environed by about 40 lead mines,

within a radius of 20 ms. Lat. 37° 56' N. lon. W. C. 18° 24'.

Potosi, *San Louis*, formerly an intendancy, now a state of Mexico, bounded S. by Queretaro and Guanajuato, W. by Zacatecas, N. by New Leon, E. by Tamaulipas and the Gulf of Mexico, and SE. by Vera Cruz. Length from N. to S. 200 ms., mean width about 95; area 19,000 sqms. Lying between lat. 21° 30' and 24° 20' N., and from lon. W. C. 100° 10' to 24° W.

The new independent state of San Louis Potosi, comprises the former province of San Louis, in an intendancy of much greater extent. Although of limited area, San Louis presents a very great inequality of climate, seasons, and of vegetable and mineral production. The western part commences on the elevated table land of Anahuac, at perhaps, from 5000 to 8000 feet above the Gulf of Mexico. Falling from this aerial height to the Bar of Tampico, the traveller, in a few days, experiences a change of temperature equal to 15° of lat.

Crossed almost centrally by the northern tropic, and its parts differing so much in relative height, the air of this small state exhibits all the meteorological phenomena, usually found from the tropics to lat. 39°. Humboldt, speaking of the ancient intendancy, observes, "of the whole intendancy of San Louis Potosi, only that part which adjoins the province of Zacatecas, in which are the rich mines of Charcas, Guadalcasar, and Catorce, is a cold and mountainous country." This mountain region, reverted to by this acute observer, is the western part of the new state, and contains its capital. San Louis is very deficient in rivers or harbours, but rich in soil, and mineral wealth. Upon Tanner's map, the pop. is stated at 174,957. This would yield a distributive pop. of 10 to the square mile.

The following additional information respecting this city was forwarded to the publishers, and inserted, though rather lengthy, from the importance of its contents.

The city derives great advantage from the navigation of the Appomattox—a large part is fertile, well watered, and highly cultivated—industry and economy characterize the inhabitants—the most numerous religious denomina-

tions are the Methodist and Baptist; there are 3 Presbyterian churches. An English school is kept in every neighborhood; 6 or 8 valuable classic schools are maintained; and great attention is given by the more wealthy citizens to female education. Various benevolent associations are formed for the distribution of bibles and tracts, for the support of Sabbath schools, and for educating indigent and promising youth.

Hampden Sidney College in this city, has an elevated, dry, and remarkably healthy situation, 80 ms. SW. from Richmond, and central to the southern section of Virg. The college was founded in 1775. The following men have successively filled the presidential chair, viz:

Rev. Samuel Stanhope Smith, D.D.; D.; Rev. John Blair Smith, D.D. Rev. Archibald Alexander, D.D. Rev. Moses Hoge, D.D.

The charter is as liberal and ample as that of any college in the U. S. The corporation consists of 27 men, most of whom are graduates of other colleges. The laws of the corporation, which relate to the instruction, and to the internal government of the college, are committed to the faculty, consisting of the president, professors, and tutors.

The following professorships have been established the president is the professor of Mental Philosophy, Rhetoric, Moral Philosophy, and Natural Law. The professor of Chemistry and Natural Philosophy, of Mathematics, and of the Learned Languages.

The apparatus is adequate to a very liberal course of experiments in Chemistry and Natural Philosophy. A collection of valuable specimens is the commencement of a mineralogical cabinet. The College library, with those belonging to the Anthropotic, the Union, and Philosophical societies, exceed 2,000 select volumes. The permanent funds of the college, consist in land, and bank stock. By a provision of the Legislature, it will receive more ample endowment.

The number of under graduates, at the close of 1821, exceeded 100, and is rapidly increasing. In addition to the present buildings, a brick edifice is now erecting, 180 feet in length, 50 in breadth, and 3 stories in height, containing 48 rooms for the accommodation of students, besides 40 feet of the centre, which contains the chapel, 10 feet by 50, and the other public rooms.

There is also a valuable Academy, under the direction of the faculty, in which those students only are taught that are required for the admission into the lowest college class. The college year has two sessions; the winter session, six months, commences with November and ends with April. The summer session, commences with June and ends with the college commencement, on the last Thursday in September.

Prattstown, tp. Harrison city. Virg., on the

road from Clarksburg, etc., and at the ferry over the North Branch of the Potomac river, 17 ms. N.E. by the road from Clarksburg, and by road, 210 ms. a little N.W. of from W. C. Prussia, Kingdom of Europe, partly in the former Poland, and partly in Germany, bounded E. by Russian Poland; S. by Austrian Poland, Bohemia, Saxony and other German states; NW. and by part of Germany, and bounded by the Baltic. The whole Prussian monarchy extends over 105,000 sqms., with a pop. of about 10,000,000.

The Prussian monarchy, since the acquisition of all Pomerania, occupies the whole northern shore of the Baltic, from Memel to the Bay of Stralsund, or from 10° 23' 30" E. to 30° 30' E.; and from 54° 30' to 56° 30' N. The slope of Prussia is towards the North, the rivers flowing in that direction, the principal streams, the Memel, Vistula, Oder, and the Elbe, rise S. from, and traverse the Prussian territories. Except the Kingdom of the Netherlands, Prussia is of all the states of continental Europe, best supplied with navigable canals. The rivers of northern Germany in general, similar to those of Poland and Russia, are remarkably free from natural obstructions to navigation, and the extensive plain, sloping from the Bohemian and Silesian mountains towards the German Ocean, and Baltic Sea, affords great facility to intercuts, or canals uniting the various rivers. The greatest part of these artificial channels of intercommunication, are due to Frederick II. In 1743, the canal of Planen, to connect the Havel with the Elbe was commenced, and completed in 1745. By this cut across the peninsula between those rivers, the water distance from Berlin to Magdeburg was shortened 76 ms. The canal is 17 ms. long. By the canal of Planen the Upper Elbe has a direct communication with the finest parts of Brandenburg and Lusatia.

The Finaw canal leaves the Havel 20 ms. N. from Berlin, and extends to the Oder at Frankfort. It is 23 ms. long, and by 13 locks falls 130 feet. This canal, though undertaken in 1605, was not completed until 1751.

The canal of Muhltrose, is a second link of connection between the Havel and the Oder. The Spree is the main branch, rising in the Hohem mountains, and after traversing Lusatia and part of Brandenburg, joins the Havel at Potsdam. From the Spree 10 ms. S.E. from Berlin, the Finaw canal leaves the Spree, and by a single lock of 10 feet, rises to the summit level, from which it again descends 64 feet by 7 locks, to the Oder 5 ms. above Frankfort. The entire length 33 ms., depth 10 feet, and width 60 feet.

These two canals complete the connection between the Elbe and Oder. The former is again united to the Vistula by the canal of Bromberg, constructed from 1772-5 by Frederick II. It is 16 ms. in length, leaving the Netze, branch of the Warta, and falling by 9 locks, 67 feet to the Brake, a small affluent of the Vistula. The navigation is then continued to the isthmus, by the Brake, the latter canal is called the Oder Canal, and flows from the town of that name on the Netze. The Brake joins the Vistula between the island

Gulm. From this point to Konigsberg, in Pomerania, the Vistula and the Prussian Gulf afford an internal water communication; which is again extended by the Pregal river, and its branches, into E. Prussia.

The Vistula and Dnieper are connected by the canal of Plock. This latter improvement is, however, in the Russian territories, and is formed between the Hüg, branch of the Vistula, and the Prypiez, branch of the Dnieper, lat. 52°.

The climate of Prussia is cold in winter, but though much of the surface is low and interspersed with stagnant water, generally healthy. The soil is various, from sterile sand, to the most productive alluvion, but the prevalent characteristic is that of moderate fertility. Grain for exportation, is very largely produced, and fruits of excellent quality abundant. In minerals, the Prussian provinces are not rich, though iron and some other metals are found, and wrought to advantage. Since the eventful reign of Frederick II, manufactures and internal commerce have flourished in Prussia, and with all its reverses in the early part of this century, this kingdom may be pronounced in a prosperous condition.

Brandenburg was the original nucleus round which the existing Prussian monarchy was formed; and in succession, have been united, Brandenburg, Pomerania, Silesia, Magdeburg, Halberstadt, Cleves, Minden, March, Ravensburg, Lingen, Meurs, East Friesland, and Lusatia in Germany; Prussia, Posenania, Dantzic, and other territories in Poland. Prussia, though generally considered as a German state is by no means so exclusively; as full one fourth part of the monarchy is Polish. The kings of Prussia, as German princes, represent the ancient Margraves of Brandenburg, and as Polish, the former Grand masters of the Teutonic knights.

Prussia is at the head of Protestant Germany, as Austria is of the Roman Catholic faith. Toleration of all religious sects is, however, more liberal in the former than in the latter state. In Prussia are found Calvinists, Lutherans, Catholics, Jews, Greek Church, Moravians, Anabaptists, Unitarians, and some other sects. The government though not absolute, is but slightly limited in the exercise of power, but public opinion from general and increasing information opposes a very severe restraint upon the operations of authority in Prussia.

Puebla, town of Spain, in Estramadura, seated near the Guadiana, 18 ms. W. of Madrid. Lon. $4^{\circ} 15'$ W. lat. $38^{\circ} 42'$ N.

Puebla-de-los-Angeles, formerly an Indian city, now a state of Mexico; bounded by the Pacific Ocean S., Mexico W., Querataro N.W., Vera Cruz NE., and Oaxaca E. and SE. Length 350 ms. mean breadth 53, area 18,441 sq. ms. This state extends from $16^{\circ} 57'$ W. lon. to $20^{\circ} 40'$ N. lat. and is entirely within the tropics. Above lat. 18° Puebla spreads into an immense plain from 5900, to 6560 feet elevation, and highly productive in wheat, maize, Agave, and fruit trees. Puebla may be properly, like Oaxaca, Mexico, and Mechoacan, divided into the mountainous and oceanic regions. Below N. lat. 18° along the small river Yopez, to the Pacific, the country falls from 5000 feet to the level of that ocean. The pop. is concentrated upon the elevated and salubrious table land, and though well adapted to the cultivation of sugar, indigo, cotton, and great variety of tropical productions, the southern slope is left in great part a wilderness. The pop. given on Tanner's map, 1825, is 1,212,495. This mass, or at least one million, exists upon about 10,000 sqms. affording a distributive pop. to the northern part of the state, of 100 to the sqm. Under the head of *Pyramids of America*, the reader will see a condensed view of the immense remains of antiquity found in Puebla. See also *Pepocatchepel*.

This state, rich in manufactures and vegetable produce, has little metallic wealth in its bowels, or if the precious ores exist they have not been discovered. Salt and marble abound. Export commerce is inconsiderable. The most remarkable cities and towns are Puebla-de-los-Angeles, Tlascala, Cholula, Atlixco, Tehuacan-de-los-Grenadas, Tepeyaca, or Tepeyacac, and Huajocinco or Huezotzinco. The small territory of Tlascala, is enclosed within the state of Puebla.

Puebla-de-los-Angeles, city of Mexico, and capital of the state of the same name. This fine city was founded, by the Spaniards, in 1531, on the plain of Acaxete, or Cuixtlaxcoapan. It is the 4th city of Spanish America, according to Humboldt, who states, that it is only exceeded by Mexico, Guanajuato, and Havana. Pop. 1803, from Humboldt, 67,800, and in 1825, by Tanner's map, 100,000. Lat. 19° N. lon. W. C. 21° W. 87 ms. SE. by E. from Mexico, and 160 ms. WNW. from Vera Cruz.

Pyramids of Egypt, structures formerly considered one of the Seven Wonders of the World. They are built upon a rock, at the foot of the high mountains which accompany the Nile in its course, and separate Egypt from Lybia. Various have been the conjectures how and when they were built, yet no two authors agree exactly about them; however, this is certain, that they are extremely ancient, and that there is no dissent, in any author of credit, as to, or for what reason they were founded.

Pyramids, Teocalli, and other ruins of North America. The stupendous magnitude of those monuments of antiquity on some parts of this continent is very little known. They are spread over an immense space of country in the empire of Mexico. They consist of:

Cholula, situated at the Intendency of Puebla, N. lat. $19^{\circ} 2' W.$ lon. W. C. $21^{\circ} 13'$. This pyramid consists of four stages, perpendicular elevation 177 feet, and the horizontal breadth of the base 1423 feet. Its sides are exactly parallel to the meridians and parallels of lat., and constructed of alternate strata of brick and clay. It is matter of real astonishment to find the similarity of form and constituent material between this Mexican monument, and that of the temple of Belus, at Babylon, and the pyramids of Muischich.—Dashour, near Sahara in Egypt.

The immense platform of this truncated pyramid has an area of 22,208 square feet, whose sides exceed 212.5 feet. From this platform is seen in clear weather, the volcanoes of Puebla, Peak of Orizaba, and the mountains of Matlacueye.

The pyramid of Cholula and that of Tonatiuh Itzaqual, are very nearly of equal height, and about 10 feet higher than the Mycerinus, third in elevation of the group of Ghize. Its breadth of base exceeds that of all similar monuments found by travellers on either continent; almost double that of Cheops. It has been supposed that this vast edifice was formed by an incrustation of clay and brick around a natural hill; but a road cut through part of the first, or lower stage, favours the supposition, that it is entirely artificial. Though dilapidated by time, and no doubt much depressed, yet its height, and the length of its base are still 8 to 1; whilst that of Ghize is 6 to 5 nearly. It has long been observed, that a regular gradation of symmetrical pyramids surround the larger of those of Egypt. Mr. Grobert has published a drawing of the regular disposition of the small pyramids, which environ the Cheops and Mycerinus at Ghize. The Teocalli at Cholula, and Teotihuacan are in an analogous manner surrounded by lesser monuments. To the W. of the former, stand two prismatic masses, now called Alcosac, and Cerro de la Cruz.

To the NE. of the city of Mexico, and of the lake of Tezcucio, in the Mexican Valley, are the remains of the Teocalli, or temple of the sun and moon, or pyramids of Teotihuacan, consisting of two truncated pyramids, called in the Aztec language Tonatiuh Ytzaqual, and Metzli Ytzaqual. According to the measurements made by Mexican, Dr. Orteyza, the house of the sun,

which is most ancient, has in its present state, a base of 62 feet and 171 feet perpendicular elevation. The house of the moon has a lesser base, and is only 135 feet in perpendicular height. Those monuments from their form would seem to have been the models from which the other Teocallis of Mexico were constructed. The Aztec nation, founded by the Spaniards in New Spain, attributed the pyramids of Teotihuacan to the Tultecs, consequently they must have been erected above 1000 years. • Sigüenza considered them to be the production of the Olmecs, so that they are three or four centuries still more ancient, than if constructed by the Tultecs.

The faces of these pyramids are within 2° of an exact conformity to the meridians and parallels. Their interior is crisscrossed with small stones, encrusted with a mass of amygdaloid. Traces of a regular plan, entering the stone, are still visible, and the sides of vegetation and human culture, are here, as in all similar cases, changing the pyramid to the conical figure, by erasing the features of the outer crust. The original was composed of four stages, again subdivided into steps of a little more than three feet. A winding staircase of large hewn stones formerly led to the top. The Tonatiuh Ytzaqual has, according to Orteyza, a cubic mass of 33,743,201 cubic feet. To pierce such enormous bodies is a very difficult undertaking; it is therefore not easy to determine the problem, whether they are natural elevations modified by the hand of man, or entirely artificial. Mr. Humboldt inclines to the latter supposition respecting those of Mexico, and supports his opinion by their isolated position on plains. That those of Teotihuacan are the products of art, is also rendered almost certain by the circumstance of a group of smaller pyramids surrounding the larger. These lesser monuments of about 30 feet elevation, extend from the four faces of the larger pyramids in various directions, in exact conformity to the meridians and parallels. They amount to many hundreds, and are most abundant S. of the temple of the moon, than towards the temple of the sun. According to the traditions of the natives, these smaller pyramids were dedicated to the stars. There is little doubt but that they served as sepulchres to the chiefs of tribes. The whole nation bore witness to the Aztecs, and Tultecs, that the name of Micaotli, or, *road of the sun*, is of great analogies," says Humboldt, with the monuments of the ancient continent, and the Olmecs (or Olmec), nation, arriving in the Mexican valley in the seventh century (or more early), constructed by the same plan several of these colossal edifices. Those truncated pyramids, situated near the temple of the sun at Cholula, whence they derive the name of the edifices. Were they of a common stock with the Chinese, the Japanese, and the Japanese? Or more probably, were they not signs whose distribution was indigenous? The pyramidal form of temples, and their N. and S. and E. and W. position, are the result of the same natural causes, applicable to all mankind.

Another ancient monument is the military

entrenchment of Xochicalco, situated to the S.W. of Cuernavaca, near Tetlama. It is an insulated hill of 380 feet elevation, surrounded with trenches and cut into 5 stages, or terraces covered with masonry. The whole forming a truncated pyramid, whose faces correspond to the cardinal points. The basaltic and porphyry stones, are covered with hieroglyphics, the most striking of which, are crocodiles spouting water, and men sitting in the cross-legged position of Asiatics. The platform of this monument contains more than 96,825 square feet. Though J. de Humboldt calls this a fortress, it would seem from its form, to have had an analogous use with the pyramids of Cholula, and Teotihuacan. Edifices, however, answering the double purpose of forts and temples, have been found in various parts of the earth, in very distant ages.

The most remarkable monument of antiquity in America, for the elegance and symmetry of its ornaments, is the ruins of the palace or temple of Mitla in Oaxaca. The walls of Mitla are decorated with Grecques, and labrynths in Mosaic, of small porphyry stones. Mitla was called by the Aztecs, Muquitlan, or, *place of sadness*. It appears from its form, and from tradition, to have been a palace erected over the tombs of the kings. It was a house of mourning, to which the monarch retired to deposit and weep over the remains of a beloved relative, and where he himself was one day to repose, with the ashes of his fathers. It is in the incipient stages of civilization, that these colossal monuments are erected for the dead. In Egypt, in India, in America, the founders are lost amid the fragments of their own mausoleums.

The palace tombs of Mitla, form three edifices symmetrically arranged, and in a very romantic situation. The principal and best preserved edifice is about 130 feet in length; a stair way leads to a subterraneous vault, 38 by 26 feet. This gloomy recess is also ornamented with Grecques.

But what particularly distinguishes the ruins of Mitla from every other remain of Aztec architecture, is 6 porphyry columns, which are placed in, and support the ceiling of an immense hall. The columns, the only ones yet found in America, evince the infancy of art, having neither base nor capital. Each is composed of a single block of amphibolous porphyry. They are 18 feet in height, and their proportions, 12 modules or 6 diameters, consequently would be higher than the Tuscan, if the inferior diameter of the columns of Mitla, were not in the proportion of three to two, to their upper diameter.

A striking analogy has been observed in the disposition of the interior apartments of Mitla, and in the monuments of upper Egypt, drawn by Simon. In the ruins of Mitla have been found paintings representing warlike trophies and edifices.

In the northern part of the intendancy of Very Cruz, W. from the mouth of the river Tecolutla, two leagues distant from the great Indian village of Papantla, we meet with a pyramidal edifice of great antiquity. This singular remain is of late discovery, not being known to

the Spaniards above 60 years. The pyramid of Papantla is not composed of clay and bricks, mixed with basaltic stones, and faced with a wall of amygdaloid, like those of Cholula, and Teotihuacan, the materials employed in the construction of those of Papantla, are enormous stones, very regularly cut. Mortar is still distinguishable in the seams. The stones are covered full of hieroglyphics.

The base of this pyramid is an exact square, each side having 82 feet; its perpendicular height is about 60 feet. The pyramid of Papantla is not so remarkable for its mass, as for its symmetry, the fine polish of the stones, and their very regular cut. It is like all the other Mexican Tocali, erected in stages, six remain distinguishable, and a seventh appears to be concealed by the vegetation, which covers its outside to its summit. A great stair of 57 steps conducts to the truncated top, or platform. On each side of the great stair, is a small stair. On each side are hieroglyphics, in which the figures of serpents and crocodiles in relief, are visible. Each story contains a great number of square niches symmetrically distributed. In the first story is 24 on each side, in the second 20, and in the third 16.

At an immense distance from the monuments of Mexico, near the Rio Gila, are found very extensive ruins of an ancient Aztec city, in the midst of which is the edifice, called by pre-eminence, *la Casa Grande*, laid out in exact conformity to the four cardinal points. The ruins spread over more than a square league of ground. The Casa Grande is 445 by 276 feet, constructed with clay. The walls are 3 feet 11 inches in thickness. It is still perceptible, that this edifice had three stories and a terrace. The stair was on the outside. A similar construction is still preserved in all the villages of the independent Indians of the Moqui, NW. from New Mexico. The ruins are on a plain, where the remains of a canal are yet visible, which served to conduct the waters of the Rio Gila to the city. The whole plain is covered with broken pitchers and pots, painted blue, red, and white. Amongst these fragments are found pieces of obsidian, (ilzth,) from which the Mexicans formed their knives and razors. The Indians of the Rio Gila yet retain a great share of their ancient civilization, and in their architecture, and household furniture, much of the perfection of their ancient arts.

To these ruins, in Mexico and the internal provinces, may be added, the remains found in the basin of the Mississippi. The latter are indeed much more diminutive than the former, and built on an entirely different plan. A connexion between the remains in Mexico, and those in Mississippi basin, has been supposed, but seems unsupported by any conclusive testimony arising from analogy. Obsidian is entirely wanting in the fragments of domestic utensils, and military weapons, found in the Mississippi ruins. The pottery is also different in the two regions. But the most decisive circumstance evincing an entire dis-connexion, is, that in the intermediate countries no remains similar to either are found. The solidity, extent, and hieroglyphic sculpture found on so large a scale, in the Mexican monuments, evince a state of

science, art, and civilization, at least as far advanced as that of Egypt, at the period when the pyramids were constructed; whilst the rudeness, simplicity, and absence of all mental representation in their structures, prove that the ancient inhabitants of Ohio and Mississippi, were not more, if as far advanced in the arts of civilized life, as the present tribes of South Sea Islanders.

The most remarkable circumstance, however, respecting the North American ruins, is, their almost entire non-existence, on the Atlantic slope, E. of the Alleghany mountains; the aboriginal nations seem to have been at all times purely savage, whilst traces of agricultural life, are frequent and striking, W. of the Alleghany ridge, in all the intermediate stages, from the barrow of Ohio, to the superb edifices of Puebla, Oaxaca, Mexico, and the Rio Gila.

It may be observed respecting all the pyramidal structures yet known, from the temple of Belus, to the most rude barrow; that they are on alluvial soil, in most instances on plains, and that the founders, and the real purposes, for which erected are alike lost in the darkness of past time.

Pyrenean Mountains, or *Pyrenees*, a large chain of mountains, the principal of which are in the kingdom of Spain, which they divide from France; the general range equals the Alps in height, and extends from the Mediterranean Sea to the Atlantic Ocean, 200 miles in length, and 108 in breadth. They begin near the harbour of Vendres, in Roussillon and run as far as Fontarabia. Near Roussillon, they divide into two principal branches, one of which separates Roussillon from Languedoc, and is called Antipyrene; and the other, which separates it from Catalonia, is denominated Col de Pertuis. Over them are many passages, but all extremely difficult, and between them several fertile valleys. The first and greatest is by Bayonne, to St. Sebastians. This road, for about 22 leagues, lies through the Pyrenees. The second pass is from Perpignan to Barcelona, a distance of 50 ms. through the mountains, where in many places 100 armed peasants may arrest the march of an army, and where neither houses, provisions, nor accommodations can be found. The third pass leads from Ba-

yonne to Pampeluna, the capital of Navarre; this difficult defile is only passable between the months of May and October. The fourth road is that which leads from Terbes, in Bigorre, to Saragozza. It is a tract merely servious to muleteers during the summer, but in winter the wolves and snows render it totally impassable.

There are nearly 60 other narrow passes, called openings, most of which are rugged, intricate, and hardly passable for laden beasts, and even these are frequently blocked up with snow.

Reading, borough, and capital of Berks cty. Penn., on the NE. bank of the river Schuylkill, 54 ms. NW. of Philadelphia, and 53 E. of Harrisburg. This town is conveniently situated for internal commerce, being the entrepot of vast quantities of grain and lumber that are brought hither, and rafted or conveyed in long boats to Philadelphia and its vicinity. Reading is a regularly laid out, and very neatly built town, situated in a fertile and well cultivated country. A majority of the inhabitants are Germans, and justly distinguished for industrious habits. The improvements now in progress in the navigation of the Schuylkill and Union canals, will, when completed, conduce in a high degree to the prosperity of Reading, and must render it one of the most flourishing interior towns of the state.

Red river, branch of Assiniboia, rises near the sources of Mississippi, flows N. about 70 ms. and joins the Assiniboia. 70 ms. above

Lake Winnipeg. Lord Selkirk's settlement is near their junction.

Red river, branch of the Mississippi river. This stream rises in the mountainous prairies E. of Santa Fé of New Mexico, between N. lat. 32° and 35°, W. lon. W. C. 28°, flows in nearly an eastern direction, over 11° of lon. 640 ms. in a direct line, but at least 800 comparative course, to where it turns to the SE. and enters Louisiana, and thence continuing the latter course 300 ms. it joins the Mississippi at N. lat. 31° 1' W. lon. W. C. 14° 45'.

Red river is formed by a number of tributary streams, the principal of which are, False Ouachitta, Blue River, Kimitchie, and Vasseux. All these streams unite near the former. Panis Villages, about 350 ms. below the sources of Red river. The Vasseux rises in the Great Prairie, about N. lat. 34° and W. lon. W. C. 20°. The Kimitchie and Vasseux, rise in the same ridge, and pursue very nearly a similar course, each joining Red river, after a course of about 200 ms. Little river of the N. falls into Red river, a short distance above the NW. angle of Louisiana. It rises in the Maserne mountains, is a clear, beautiful, and pure stream of water, of about 150 ms. in length. From the source of Red river to the mouth of Little river of the N., is about 600 ms. in a direct line, but much farther by comparative course. Little river of the S. rises in the prairies S. of Red river, and about 40 ms. SE. off the Panis Villages, it runs nearly E. 150 ms., and falls into Red river in Louisiana. The distance from the source of Red river to the mouth of Little river of the S., is about the same as to Little river of the N., 600 ms. in a direct line; but estimating the distance along the meanders of either False Ouachitta, Blue river, or Red river proper, and it must exceed a thousand miles. The Red river winds along the great inclined plain, dividing it into two parts, forming the limits between the waters which flow into the Gulf of Mexico, and those entering the Mississippi. The country from whence Red river draws its water, is a vast prairie, except along the banks of the river, and even there, the very little timber is dwarf; the most abundant species, is a variety of the robinia, or black locust, called by the hunters, musquetoe wood. The range of low mountains, is extremely fringed of timber.

After the junction of Blue river, Red river is navigable for boats of large size, during the spring floods, timber becomes more frequent and of larger size. At the mouth of Vasseux, pine first occurs on the S. side; the banks are elevated above inundation, and the land of good quality. The river here is much wider than near the Mississippi. From the Panis Villages to near the Avoyelles, the banks of Red river will admit settlement, and many of its tributary streams will in some future period, be the abode of civilized man. The banks are alternately either woodland or prairie, until within 20 ms. above the mouth of Little river, of the S. Many spots along the river are covered by strong cane. The waters coming into Red river from Mount Ceme, are pure and limpid, those of Red river and its southern branches are brown and turbid. Below the mouth of the

the river of the S., Red river assumes a S. course upwards of 100 ms. in a direct line.

The immense volume of water brought down by Red river, cannot be contained within its banks during the season of flood, and about N. lat. 38° the alluvial overflow commences. Here the river divides into a number of channels, the face of nature changes; the shores become low, the species of timber such as are generally found upon the banks of the Mississippi in corresponding latitudes, except where by the winding of the stream, a fine blue approaches the river. The river is now filled with islands, and interlocking channels. A chain of lakes also commences on each side, which, leaving the river, occupies the interval between the hills, on each side. These lakes serve as a natural deposits to the accumulating mass of water pouring down from the higher branches of the river. The most remarkable of these lakes are, Bodcau, Bistineau, and Black lakes, on the left, and Cassi, Natchitoches, Spanish lake, and Cado lake, on the right side of Red river.

On reviewing this part of Red river, between the Grand Ecor, 4 ms. above Natchitoches, and lake of Bodcau, it appears that the intermediate space was once a lake, which has been gradually filled by an accumulation of earth from the abrasion of the water on the banks of Red river, and its numerous tributaries. The lakes which now exist, all lie in the valleys of considerable streams communicating with Red river, whose mouths have been impeded by the alluvion of Red river, and natural drains formed from hill to hill. The beds of these recent lakes are much lower than the surface of the river at high water, though higher than the channel of the rivers. In autumn and the early part of winter, when the waters have been drained by the depression of the river, much of the ground covered by the spring floods in those lakes becomes dry land, and exhibits meadows of succulent herbage. In the channels of most, there is consequently an annual flux and reflux, as the water in the river and lake preponderate in height. When Red river commences its annual rise, the currents set strongly into the lakes, which gradually return their waters into the river with great velocity, when the depression of the river by the summer heat, begins to take place. This flux and reflux is continued, the connecting channels are never dry. Most of the lakes have the pine woods on one side of them, from which issue fine clear creeks of water, whose pellucid currents preponderate over the turbid waters of the river. Were it not for these spacious depositories above Natchitoches, the fine alluvial border of Red river, that territory, would be much more restricted in extent, and the cultivation of the whole, so much more precarious. From the upper part of lake Bistineau to the lower settlement on Red river opposite Avoyelles, or even to the mouth of Black river, the lands are sufficiently high and fertile for cultivation, on both banks, and in every place on one side. The high lands, or pine forests, pursue each side nearly the same course with the river. On the right bank the pine bluffs reach the river bank, for the first

place below the alluvial tract above; 4 ms. lower down, the pine hills again reach the river at the town of Natchitoches, and in two or three other places still lower down, the pine hills again reach the river with a rocky base; but at the Bayou Rapide the high grounds on the right, quit the river entirely, and continue SE. towards Opelousas. On the left bank, the pine hills reach the river below the alluvial tract at Campte, 12 ms. above Natchitoches, but follow the bank only 3 or 4 ms., when they retire, and do not again approach the bank until nearly opposite the rapids; below which some few bluffs lie along the banks, the last of which, is the Ecor a Cheniere, opposite Avoyelles. From the Ecor a Cheniere to the mouth, Red river flows over an alluvial flat, annually overflowed.

What is generally, though very erroneously called the raft of Red river, is merely what I have noticed, a maze of islands and channels, through which, though difficult, boats of any requisite size, can be conducted at high water. The raft, as it is called, is not so great an impediment to the navigation of Red river, as is the rapids at Louisville to the Ohio, much less the Muscle Shoals in Tennessee.

Red Sea, extending 1300 ms. from N. to S., and 200 in the widest part, from E. to W. It divides Arabia from Africa, and is separated from the Mediterranean Sea, on the N., by the isthmus of Suez, and communicates by the straits of Habelmandel on the S. with the Arabian Sea and the Indian Ocean. The Red Sea is the most extensive known sheet of water which receives any river of considerable magnitude. The general course of the Nile is very nearly parallel to the Red Sea, but the intervening space, varying from 50 to 200 ms. is mountainous. On the African side the mountains rise, in most places from the immediate shores; on that of Arabia, a mountain chain extends parallel to the Red Sea, about 80 ms. inland.

The bottom and shores of the Red Sea, so far as being Red, "are covered" says Malte Brun, "with a carpet of greenish coral; in clear weather the bottom, when it comes into view, is not unlike a series of verdant submarine forests or meadows." The shores of the Red Sea, and Persian Gulf are composed in great part of shell-limestone rocks. The Red sea was called by the Hebrews; *Bahr-Soph*, i. e. the Sea of Algae, seaweed.

From its range and position, viewed on a map of the world, the Red sea appears to present,

the most natural opening between the Indian and Mediterranean seas, but many causes natural and political, combine to withdraw the civilized nations of Europe and Asia, from this, the most ancient channel of intercommunication. The Red sea, and Persian Gulfs, are obstructed by small and numerous isles, sunk rocks, and sand banks, and the entire shores of the former are in an unequal manner, barren and barbarous. The regular Monsoons, and also changing winds, render the tides unequal and very uncertain in their revolutions. But the most powerful of all causes, which have operated to change the commercial route of nations, are, the magnetic needle, and improvements in ship manufacture. The circuitous but open route by the Atlantic and Indian Oceans, with the safe and commodious modern vessels, supplied with instruments which demand only a taper's light, to direct the mariner amid surrounding darkness and storm, will be perhaps, forever, preferred to a more direct, but obstructed passage.

Rhine, great and remarkable river of Europe, which rises in Switzerland, in the canton of Uri. It is formed of three streams; the *Upper Rhine* from the head of the valley of Glarus, the *Middle Rhine* from the valley of Medels, an appendage of St. Gothard; and the *Lower Rhine* from the mount Avicula. The first two torrents united is called the *Upper Rhine*, which receives the *Upper Rhine* at Riehenau; and the height is here about 6180 feet above the sea. Flowing by Colre, at the distance of a mile, the Rhine here becomes navigable for rafts. It is soon after the boundary between the Rheinthal and a territory of Austria, and passes through the lake of Constance from E. to W. Leaving this lake, it becomes the boundary between Switzerland and Suabia, flowing by Schaffhausen (below which it forms a celebrated cataract) to Basel. At Basel the river turns to the N., and flows thence to Holland; in which course it becomes the barrier between France and Germany, gives name to the two German circles of the *Upper* and *Lower Rhine*, waters many considerable cities and towns, and receives some large rivers. Below Emmerick, in the dutchy of Cleve, it divides into two streams. That which bends to the W., and flows by Nimuegue, is called the *Waal*, but loses that name on its junction with the *Meuse*, at Gorcum. Below Gorcum, it divides into four principal branches, forming the isles of *Ysselmonde*, *Voorn*, and *Overslackee*; the most northern branch is called the *Merwe*, and passing by Rotterdam and Schiedam, is joined by the branch from the S. side of *Ysselmonde*, and enters the German ocean, below Briël; the other two branches make their exit at Helvoetsluis and Gorcum. The other stream which had branched off to the NW, below Emmerick, retains its name; but below Huesen another branch off to the N, takes the name of *Yssel*, and enters the *Zuider Zee*, below Campen. The old river proceeds W. by Arnheim to Duerstede, when it again divides into two streams; that to the left is called the *Leck*, and enters the *Merwe* above Rotterdam. The branch to the right, which retains its name, passes on to Utrecht, where it divides once more, into two streams; the smaller one is called the *Vecht*, which runs N. into the *Zuider Zee*, at Mayden; and the other, the remains of the noble Rhine, flows W. by Woerden to Leyden, where it divides into several channels, and afterward is lost among hills of sand near the village of Catwyck.

The basin of the Rhine is about 400 ms. long from S. to N., with a mean width of about 200; area 80,000 sqms. Lying between lat. 46° and 55° N., this basin slopes from the high valleys of Switzerland into the *Zuyder Zee*, and falls about 7000 feet, in 7° of lat. Advancing upwards, on the right shore, the Rhine receives from Germany, the *Lippe*, *Rhur*, *Lahn*, *Mayn*, and *Neckar*. On the left, or western side, the confluents are less numerous but of much greater magnitude; the united streams of the *Reuss* and *Aar*, from Switzerland, the *Moselle*, and the *Meuse*, from France and the Netherlands, the large streams, particularly the two last.

Below Basle, the Rhine, though at low water impeded by shallows in some places, is, however navigable to its confluence with the *Meuse*. Small boats ascend to Basle, and the large Dutch boats of 120 by 12, with 6 feet draught, and 150 tons burthen, are navigated to Strasbourg. Cologne is the great mart of the Rhine, goods being here transhipped into large vessels, called *Cologne ships*, which proceed to and from Holland. The *Moselle* is navigable from Coblenz, to Metz in Lorraine, with large, and with small boats to Nancy. The *Meuse* is the most important confluent of the Rhine, is upwards of 300 ms. comparative course, and navigable in nearly its entire length. The Rhine is, in brief, a noble line of entrance into the central and best cultivated regions of Europe; and contains upon its basin, the most dense pop. of an, river of the earth, of equal superficies. It is difficult to fix the aggregate pop. of this highly cultivated tract, but it may be safely assumed at a minimum of 15,000,000. The Rhine and its branches, drain great part of Switzerland, and Wirtemberg; western Germany, and eastern France, and more than two thirds of the kingdom of the Netherlands.

Rhinebeck, pstv. Dutchess cty. N. Y., 16 ms. W. from Poughkeepsie, and 26 S. from Hudson.

Rhinebeck. See **Rhynebeck**.

Rhine, Lower, formerly a circle of Germany. Extending from lat. 41° 18' to 42° 1' N.
Area, exclusive of water, 1200 sq. m. equal to 768,000 acres.

It is, for its extent, a very diversified state. The NW. part is hilly and broken; but gradually subsiding to level land, advancing towards the Atlantic Ocean. The islands are most delightfully variegated by gentle slopes and swells. The state is composed of three sections; that part W. of Narragansett bay, bordering on Connecticut; the islands of Rhode Island, Conanicut, Prudence, and a few of lesser note; and two small slips on the E. side of Narragansett bay. The soil of this state is as various as are the features of its geography; thin and rocky to the NW.; level and in part marshy SE.; but in the islands and in many of the capes jutting into Narragansett bay, exuberantly fertile.

Rhode Island is the most manufacturing section of the U. S., in proportion to its population. Cotton is the chief subject of manufacture. Including those on Massachusetts, near Providence, and owned in that city, more than 100 cotton factories are in operation in that vicinity. The commercial prosperity of this state has kept pace with its manufacturing industry. The amount of tonnage exceeds 40,000; and more than half the amount of exports of domestic produce. The exports in 1820, amounted to more than one million and seventy-two thousand dollars.

In no part of the U. S. has banking been carried to such an extent. There are in Providence 5 banking institutions, Newport 5, Bristol 5, Smithfield 3, Westerly 2, and at Warren, Pawtucket, Patuxet, Cranston, Gloucester, Burrillville, Scituate, Coventry, Greenwich, Wickford, and S. Kingston, one each; 33 in all.

Common schools have met with no legislative support in Rhode Island, though the interests of education have not been neglected. See Providence. Academies exist in most of the towns, and private day schools are scattered over the state in almost every neighbourhood.

Rhodes, island of the Archipelago, at the entrance of the Gulf of Macri, 40 ms. long, and 15 broad. The soil is pretty fertile, but badly cultivated. This island is much celebrated in ancient and modern history. It was taken by the Turks, after an obstinate resistance, 1523; and the small number of knights that remained, afterwards removed to Malta. A pacha is the governor-general of the island, who presides over civil justice, and military discipline.

Rhodes, capital of the island of Rhodes, was anciently 9 ms. in circumference, but the present town occupies only a quarter of the extent of the ancient city. It has a good harbour, with a narrow entrance between two rocks, on which are two towers to defend the passage. It is inhabited by Turks and Jews; for the Christians are obliged to live in the suburbs, they not being suffered to be within the walls in the night-time. Lon. 28° 25' E. lat. 36° 24' N.

Rhone, large river of Europe, which rises in Switzerland, from the glacier of Furca, between the two rocky mountains of Gleichterberg and Satzberg. Crossing the Vallais, it runs through the lake and city of Geneva, and there receives the river Arve. After which it widens, and

becomes navigable near Seissel, then running SW. to Lyons, and receiving several other streams, particularly the river Saone, continues its course due S., and passing by Orange, Avignon, and Arles, it falls to the westward of Marseilles, into the Mediterranean by three mouths. The Rhone has sources interlocking with those of the Po, Rhine, Seine, and Loire. By its most northern confluent, the Saone, the basin of the Rhone reaches N. lat. 48°, and extends to 43° 20'; the length 330 ms., mean width about 150; area 32,500 sqms. The reverse of the Rhine, the slope of the Rhone basin is to the S. This difference of direction, and slope, afford means to account for the very unequal inundations of these two rivers. The floods of the Rhine are frequently excessive, those of the Rhone generally moderate, because, though both flow from the Alps, the rise of the former commences near its source, whilst that of the latter commences near its estuary. As a navigable channel, the Rhone is very defective. Shifting sands at its mouths, render the entrance shallow and uncertain. The depth is sometimes reduced to 4 feet. About 10 ms. below Geneva, the Rhone proper passes under a natural bridge. Its fall in 7½ ms. 207 feet. The level of the Lake of Geneva, according to De Luc, is 1202 feet above that of the Mediterranean; where the river disappears, 954, and 538 at Lyons. The Saone, and the main stream below their junction, are more navigable than the Rhone proper. Various projects of uniting the waters of the Rhone, to those of the Rhine, Seine, and Loire, have been conceived, but in no instance fully executed, if we except that of the Loire from the Saone. The latter canal line is called the "Canal of the Centre," or *Charolois*. It rises from the Loire, 240 feet to the summit level. The descent from the summit level, is 400 feet to the Saone. There are 30 locks on the Loire slope, and 50 on that of the Saone. The whole length of the canal is 71 English ins., the length of each lock 100, breadth 16, and the canal itself 30 feet wide at bottom, 48 at the water surface, and 5½ deep. The chief trade is wine, timber, coals, corn, and promiscuous merchandise, in 4000 boats annually. The basin of the Rhone, below lat. 45° N., is the true southern climate of France, the region of the olive, pomegranate, and most abundant vines. Though the departments W. of the Rhone, towards the Pyrenean mountains, are placed much farther S., the temperature, is much lower, than near the lower Rhone. A glance on the map of France exhibits the cause.

Richmond, co. and metropolis of Virg., situated in the co. of Henrico, on the N. side of James' river, at the termination of the falls, about 100 ms. above the termination of the river. Lon. 77° 31' W. lat. 37° 33' N., 21 ms. N. of Petersburg, and 124 ms. W. of Sth from the City of Washington; there are about 1460 houses, of which probably more than 1000 are of brick generally covered with slate, the rest of wood. The buildings in Richmond are generally plain, without much display of architectural taste or reference to other objects than utility; to this remark, there are however some exceptions, had the model of the capitol been equalled by its execution, it would be the finest building in the U. S., its proportions are perfectly correct and its plan chaste; and even as it is, when seen from a distance, as is often the case, it seems to rise in great grandeur and beauty before the spectator. The public square on which the capitol stands, contains about 8 acres, and has been enclosed by a substantial railing of cast iron. Many other improvements have been designed and in part executed, which, when completed, will render it a place of greater beauty. Near the capitol stands the Government house and City Hall, a handsome and costly building. The Presbyterians, Episcopalians, Baptists, and Methodists, have each two places of worship, the Friends, Roman Catholics, and Jews one; of these, that which will be regarded with most interest by the traveller, is called the Monumental Church, now an Episcopalian place of worship, erected on the site of the Theatre, which on the 26th December, 1811, was consumed by fire, and in which the governor of Virg., G. W. Smith, Esq. and 71 other persons, many of them highly respectable, perished. The Monument, when completed, will commemorate this mournful event. A new Theatre has been erected, suf-

ficiently spacious for the purposes for which it is intended. There are also a Penitentiary, an Armory, a Lancasterian School House, an Orphan Asylum, a Poor House, and a valuable though small Public Library, and a Museum, in Richmond, besides a number of buildings connected with commerce and manufactures, such as three banking houses, two insurance offices, four tobacco ware houses, a sugar refinery, two rolling and slitting mills, nail manufactory, and four very valuable flour mills.

The town of Richmond was established by an act of the general assembly of Virg., in the year 1742, and the seat of government for the state, was removed from Williamsburg in 1780; at which period the pop. may be conjectured at 500 persons; in the year 1822, the number of inhabitants of the city, and of such of the suburbs as are immediately connected with it, may fairly be rated at 16 to 18,000, a majority being white persons; this rapid increase of pop. during the last 42 years, may in part be ascribed to the transfer of the seat of government, with its attendant advantages, but as the number of officers connected with the state government is not considerable, and the courts of higher jurisdiction which for a few years sat in the capital, have since been branched out in such a manner that their sessions are held in other places—other causes must be sought for to account for the whole effect produced in the period first mentioned. The very fruitful country bordering on James' river, above its falls, was partially and imperfectly cultivated, and the impossibility of obtaining a navigation through the rapids immediately above Richmond, had deprived the inhabitants of a free use of the river for the transportation of the products of the state. In the year 1794, the canal was so far completed that all difficulty of passing the rapids was removed, and gradually since that time the navigation has been successively used for 250 ms. above Richmond, passing the range of the Blue Ridge to the foot of the Alleghany mountains. The tolls of James' River Company, afford a correct view of the growing unimportance of the country in the years, viz.

As the variable condition of the stream has caused much uncertainty in the navigation, the legislature of the state employed two very skillful engineers to survey and level James' river from Richmond to Dunlap's creek, and report to the Board of Public Works, what in their opinion will be the best mode of improving the river, and of connecting its waters with those of the Ohio: the result is, that the legislature have adopted the plan proposed by the engineers, and approved by the Board of Public Works; namely, the construction of an independent canal, bordering on the N. branches of James' river, and extending from Richmond to Dunlap's creek, a distance of 250 ms, a turnpike road of 90 ms. in length, from Dunlap's creek to a given point on the Great Kenawha, and an improvement in the bed of the Great Kenawha from that point to the Ohio river, which last affords easy and safe conveyance to the Great Salt Works, near its banks.

To accomplish this great plan, the board of Public Works have advised the legislature that an expenditure of \$2,383,736 will be required, and that upon a fair calculation of the tolls which may be exacted, founded upon the actual experience of the present company, an adequate interest may be expected upon the sum disbursed.

Three fourths of the shares of the original company have been purchased by the commonwealth, and \$500,000 have been already obtained, by a loan under its patronage, and the work is now in progress. As the funds of Virg., are exclusively applicable to internal improvement, are most ample and active, no doubt can be entertained that they will be liberally employed in the successful prosecution of the work. The influence of this grand national effort will be felt within the limits of Virg. alone, through a country of very uncommon resources and fertility, extending 400 ms. in length and 150 in breadth, and will afford to Ohio, Kent, Ind., and other western states a very safe and expeditious communication with the Atlantic Ocean.

The benefits of this work will not be confined to navigation alone; through the whole length of the canal a water power of great importance to manufactures will be gained, and within view of the city of Richmond, it may not be unfair to calculate that 100 sites for machinery of different denominations may be found, each affording an ample supply of water at all seasons. This calculation is founded upon the fact, that the elevation of the canal above tide water of the dock, is little short of 50 feet, and that the natural condition of the falls will furnish very great resources for such a supply.

Such are the advantages which Richmond possesses above the falls, nor are those which she possesses below of less importance: for a distance of nearly 150 ms. James' river meanders through an uncommonly productive country, and the depth of water is sufficient to bring vessels drawing 15 feet water, to a distance not exceeding 3 ms. from the city; a bar of sand

About 350 feet in width, forms the only obstruction to the mouth of the dock, which forms a safe harbour for more than 300 sail of vessels, drawing 12 feet water, in the centre of the city. As to her exports, Richmond is most favourably situated, for enjoying a monopoly in the coal business; is the first port in the U. S., as well for quality as quantity of tobacco; and is not much behind any other city in the article of flour, which from a variety of circumstances is adapted to her local situation, is always ready to be shipped there some months sooner than in other places.

The natural situation of Richmond is beautiful and even romantic, Shokoe and Richmond Hills stand opposite to each other, with Shokoe creek, a bold and lively stream, between them. The city is spread over those hills, and along the margin of the river the hills have been thrown into various undulations, and present a great many points, from which different views may be taken, highly picturesque and beautiful; the falls of the river, which descends more than 6 ms., the island, the town of Manchester, connected by two bridges with Richmond; the rich plantations adjoining the town, the river winding and stretching below to a great extent, the waving hills on its N. side, and the valley through which Shokoe creek passes, are the principal objects on which the eye fixes, and from every eminence they are seen in some new form, and under some new colouring of light and shade; the whole presenting the three great requisites of landscape, viz. grandeur, beauty, and variety—besides, Richmond is one of the healthiest cities in the U. S., or perhaps in the world—the annual amount of deaths on an average, is one in eighty-five; it has never been visited by yellow fever, or any violent and desolating disease.

Roanoke, island on the coast of N. C., in Albemarle cty. Lon. $76^{\circ} W.$ lat. $35^{\circ} 50' N.$

Roanoke, one of the Atlantic rivers of the U. S. in Virg. and N. C. It is formed principally by the Stanton and Dan rivers; but as Albemarle sound, is merely the continuation of Roanoke, Chowan river should also be considered one of its branches. Including therefore, Albemarle Sound and Chowan, the basin of Roanoke extends about 250 ms. in length from NW. by W. to SE. by E. with a mean width of 60 ms. embracing an area of 15,000 sqms. Geographic position between lat. $35\frac{1}{2}^{\circ}$ and $37\frac{1}{2}^{\circ} N.$ Interlocking sources with James river, Great Kenhawa, and Pedee rivers, the remote mountain branches of Roanoke rise on the most elevated valleys of the U. S. The difference of level, between the higher navigable sections of Stanton and Dan rivers, and the tide in Albemarle Sound, exceeds, it is probable, 1200 feet. The tide rises as high as Halifax, but the Roanoke is not in any part of its course, navigable in proportion to its volume. Sloops and shallows ascend about 70 ms, above which boats are used. Measures are, however in progress to render this fine stream more subservient to the commercial prosperity of the inhabitants of the country it drains. The basin of the Roanoke commences the cotton region of the Atlantic slope of the U. S. That vegetable may indeed, and is actually cultivated in the basin of the Susquehanna, but it is only with the Roanoke, that the temperature and length of summer renders cotton a valuable crop.

Rome, celebrated city of Italy, in Champagna di Roma, and the capital of the Pope's dominions. It is situate on the Tiber, over which it has four bridges. The walls are of brick, in which are 15 gates; and its whole circumference, including that part beyond the Tiber and all belonging to the Vatican, is upwards of 16 ms. It is computed to contain 170,000 inhabitants, which, though greatly inferior to what it could boast in the days of its ancient power, is considerably more than it could number at some former periods since the fall of the Empire. Some of the principal streets are of considerable length, and perfectly straight. That called the Corso is the most frequented. The shops on each side are three or four feet higher than the street; and there is a path for foot passengers, on a level with the shops. The palaces, of which there are several in this street, range in a line with the houses, have no courts before them. The Strada Felice, and the Strada di Porta Pia, are also very long and noble streets. There are no lamps lighted in the streets at night; and all Rome would be in utter darkness, were it not for the candles which the devotion of individuals sometimes place before the statues of the Virgin; these appear glimmering, at vast intervals, like stars in a cloudy night. Rome exhibits a strange mixture of magnificent and interesting, and of common and beggarly objects; the former consists of palaces, churches, fountains, and the remains of antiquity; the latter comprehend all the rest of the city. The church of St. Peter, in the opinion of many, surpasses, in size and magnificence, the finest monuments of ancient architecture. It was begun to be built in 1506, finished in 1621, and is entirely covered both within and

without with marble. Its length is 730 feet, the breadth 520, and the height, from the pavement to the top of the cross, which crowns the cupola, 450. The high altar under the cupola is 90 feet in height, and of extraordinary magnificence. A complete description of this church, and of its statues, basso-relievos, columns, and various other ornaments, would fill volumes. The cathedral of St. John Lateran, the Romans say, is the most ancient of all the churches of Rome, and the mother of all the churches in Christendom. It contains the Scala Santa, of 28 white marble steps, brought from Jerusalem, by which Christ is said to have ascended to the palace of Caiaphas. To this church every new pope constantly goes first, in a magnificent procession, to take possession of the holy see. The Pantheon is the most perfect of the Roman temples which now remain, and notwithstanding the depredation it has sustained from Goths, Vandals, and popes, is still a beautiful monument of Roman taste. The pavilion of the great altar of St. Peter, and the four wreathed pillars of Corinthian brass which support it, were formed out of the spoils of the Pantheon, which, after 1900 years, has still a probability of outliving its proud capacious rival. The Pantheon, originally erected to the honour of all the gods, is now become a christian temple, dedicated to the Virgin, and has obtained, from its circular form, the name of the Rotondo. Its height is 150 feet, and its width nearly the same. There are no pillars to support the roof, which is constructed in the manner of a cupola; neither has it any windows, a sufficiency of light being admitted through a central opening in the dome. As the Pantheon is the most entire, the amphitheatre of Vespasian is the most stupendous monument of antiquity in Rome. About one half of the external circuit still remains; from which a pretty exact idea may be formed of the original structure, and by computation it could contain 85,000 spectators. But the antiquities of Rome are too numerous to be minutely described; and the ancient Forum, now a *cow-market*; the beautiful column of Trajan, &c. must be passed over. The Campidoglio, built by Michael Angelo, is a beautiful structure, standing on the site of the ancient Capitol, so long the centre of the empire of the world. The body of this place is the residence of the senators of Rome, and the wings are inhabited by the *conservators* of the city. The pope has 3 superb palaces, of which the principal is the Vatican, near St. Peter's church. The library of this palace is the largest and most complete in the world; rich, especially in manuscripts, in all languages, and of all ages. In Rome the connoisseur will meet with innumerable paintings by the greatest masters, and with the finest works of sculpture, &c. Beside the university, which consists of several noble colleges, there are numerous academies and literary societies. The castle of St. Angelo serves more to keep the city in awe, than to repel any foreign attack. Rome was formerly the metropolis of one of the greatest empires that has ever existed, and may be regarded as the parent of all the cities, the arts, and states of modern Europe. The ancient Romans were governed by seven kings,

for about 230 years. During the next 488 years, they were governed by consuls, tribunes, decemvirs, and dictators, in their turn. They were afterwards governed by 60 emperors, for the space of 518 years. Their wars with the Carthaginians, Spaniards, Gauls, Mithridates of Pontus, Parthians, and Jews, were the most noted. The Roman empire was afterwards much distracted by various commotions, and, in 410, Rome was taken and burnt. In May, 1527, Rome was invested by the army of the emperor Charles V.; and the general, to prevent a mutiny, promised to enrich them with the spoils of this opulent city. The general, however, was himself killed, as he was planting a scaling ladder against the walls; but his soldiers, not discouraged by his death, mounted to the assault with the utmost valour, and entering the city, exercised all those brutalities that may be expected from ferocity aggravated by resistance. In the wars which attended the French revolution, Rome was again a considerable sufferer. Large contributions, and severe military exactions were drawn from the inhabitants; and a great number of the most valuable statues and paintings were sent off to Paris. Rome is 110 ms. NW of Naples, 410 SSW. of Vienna, and 600 SE. of Paris. Lon. 12° 29' E. lat. 41° 54' N.

Rosetta, town of Egypt, seated on the W. branch of the Nile. The Egyptians call it Raschid, and account it one of the pleasantest places in the country. It has a great manufactory of striped and other coarse linens; but its chief business is the carriage of goods hence to Cairo; for all European merchandise is brought

hither from Alexandria by sea, and carried hence by boats to Cairo. The Europeans have their viceconsuls and factors here. It is 23 ms. NE. of Alexandria, and 100 NW. of Cairo. Lon. 30° 45' E. lat. 31° 30' N.

Roshann, country of Asia, lying to the W. of the kingdom of Burmah, to which it is subject.
